Application Circuit

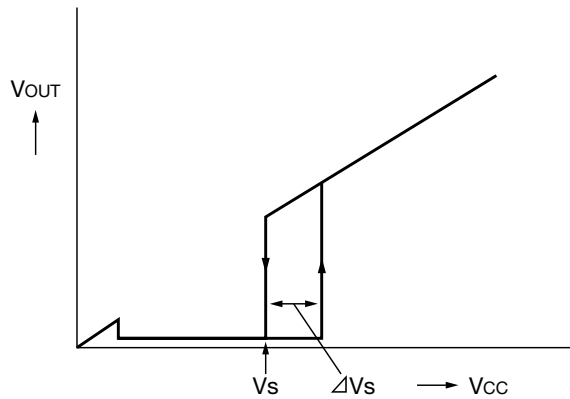

If the impedance of V<sub>CC</sub> line is high enough, connect a capacitor between V<sub>CC</sub> and GND terminal of the IC. (NOTE 1)

NOTE 1 : When the rapid noise occurs to V<sub>CC</sub>, V<sub>OUT</sub> has sometimes switched over even if V<sub>CC</sub> doesn't become below V<sub>s</sub>.

## Characteristics

#### ■ PST9244 $C_d$ - $T_{PLH}$ Characteristics

"H" transmission delay time can be calculated roughly using the following formula, but there is some fluctuation due to element deviation and the  $V_{CC}$  input signal ( $dV/dT$ ).

$$T_{PLH} [\text{ms}] \approx C_d [\mu\text{F}] \times d$$

d: delay time coefficient
