

**2M-BIT CMOS STATIC RAM
128K-WORD BY 16-BIT
EXTENDED TEMPERATURE OPERATION**

Description

The μ PD442002-X is a high speed, low power, 2,097,152 bits (131,072 words by 16 bits) CMOS static RAM.

The μ PD442002-X is packed in 48-pin TAPE FBGA.

Features

- 131,072 words by 16 bits organization
- ★ • Fast access time : 70, 85, 100 ns (MAX.)
- Byte data control : /LB (I/O1 to I/O8), /UB (I/O9 to I/O16)
- Low voltage operation : $V_{CC} = 2.7$ to 3.6 V (-BB70X)
 $V_{CC} = 2.2$ to 3.6 V (-BC70X)
 $V_{CC} = 1.8$ to 2.2 V (-DD85X, -DD10X)
- Low V_{CC} data retention : 1.0 V (MIN.)
- Operating ambient temperature : $T_A = -25$ to $+85$ °C
- Output Enable input for easy application

★ μ PD442002	Access time ns (MAX.)	Operating supply voltage V	Operating ambient temperature °C	Supply current		
				At operating mA (MAX.)	At standby μ A (MAX.)	At data retention μ A (MAX.)
-BB70X	70	2.7 to 3.6	-25 to +85	30	4	2
-BC70X	70	2.2 to 3.6				
-DD85X, -DD10X	85, 100	1.8 to 2.2		15	3	

The information in this document is subject to change without notice. Before using this document, please confirm that this is the latest version.

Not all products and/or types are available in every country. Please check with an NEC Electronics sales representative for availability and additional information.

★ Ordering Information

Part number	Package	Access time ns (MAX.)	Operating supply voltage V	Operating temperature °C
μPD442002F9-BB70X-BC2-A ^{Note}	48-pin TAPE FBGA (8×6)	70	2.7 to 3.6	-25 to +85

Electrical Specifications

Absolute Maximum Ratings

Parameter	Symbol	Condition	Rating		Unit
			-BB70X, -BC70X	-DD85X, -DD10X	
Supply voltage	V _{CC}		-0.5 ^{Note} to +4.0	-0.5 ^{Note} to +2.7	V
Input / Output voltage	V _T		-0.5 ^{Note} to V _{CC} +0.4 (4.0 V MAX.)	-0.5 ^{Note} to V _{CC} +0.4 (2.7 V MAX.)	V
Operating ambient temperature	T _A		-25 to +85	-25 to +85	°C
Storage temperature	T _{stg}		-55 to +125	-55 to +125	°C

Note -3.0 V (MIN.) (Pulse width : 30 ns)

Caution Exposing the device to stress above those listed in Absolute Maximum Rating could cause permanent damage. The device is not meant to be operated under conditions outside the limits described in the operational section of this specification. Exposure to Absolute Maximum Rating conditions for extended periods may affect device reliability.

Output active from end of write	t _{ow}	5		5		5		ns	

Note The output load is 1TTL + 5 pF.

Write Cycle Timing Chart 1 (/WE Controlled)

- Cautions**
1. During address transition, at least one of pins \overline{CS} , \overline{WE} should be inactivated.
 2. Do not input data to the I/O pins while they are in the output state.

- Remarks**
1. Write operation is done during the overlap time of a low level \overline{CS} , a low level \overline{WE} and a low level \overline{LB} (or low level \overline{UB}).
 2. If \overline{CS} changes to low level at the same time or after the change of \overline{WE} to low level, the I/O pins will remain high impedance state.
 3. When \overline{WE} is at low level, the I/O pins are always high impedance. When \overline{WE} is at high level, read operation is executed. Therefore \overline{OE} should be at high level to make the I/O pins high impedance.

Write Cycle Timing Chart 2 (/CS Controlled)

- Cautions**
1. During address transition, at least one of pins /CS, /WE should be inactivated.
 2. Do not input data to the I/O pins while they are in the output state.

Remark Write operation is done during the overlap time of a low level /CS, a low level /WE and a low level /LB (or low level /UB).

Write Cycle Timing Chart 3 (/LB, /UB Controlled)

- Cautions**
1. During address transition, at least one of pins /CS, /WE should be inactivated.
 2. Do not input data to the I/O pins while they are in the output state.

Remark Write operation is done during the overlap time of a low level /CS, a low level /WE and a low level /LB (or low level /UB).

Low V_{CC} Data Retention Characteristics (T_A = -25 to +85°C)

Parameter	Symbol	Test Condition	-BB70X			-BC70X			-DD85X, -DD10X			Unit
			MIN.	TYP.	MAX.	MIN.	TYP.	MAX.	MIN.	TYP.	MAX.	
Data retention supply voltage	V _{CCDR1}	/CS ≥ V _{CC} - 0.2 V	1.0		3.6	1.0		3.6	1.0		2.2	V
	V _{CCDR2}	/LB = /UB ≥ V _{CC} - 0.2 V, /CS ≤ 0.2 V	1.0		3.6	1.0		3.6	1.0		2.2

[MEMO]

[MEMO]

NOTES FOR CMOS DEVICES**① VOLTAGE APPLICATION WAVEFORM AT INPUT PIN**

Waveform distortion due to input noise or a reflected wave may cause malfunction. If the input of the CMOS device stays in the area between V_{IL} (MAX) and V_{IH} (MIN) due to noise, etc., the device may malfunction. Take care to prevent chattering noise from entering the device when the input level is fixed, and also in the transition period when the input level passes through the area between V_{IL} (MAX) and V_{IH} (MIN).

② HANDLING OF UNUSED INPUT PINS

Unconnected CMOS device inputs can be cause of malfunction. If an input pin is unconnected, it is possible that an internal input level may be generated due to noise, etc., causing malfunction. CMOS devices behave differently than Bipolar or NMOS devices. Input levels of CMOS devices must be fixed high or low by using pull-up or pull-down circuitry. Each unused pin should be connected to V_{DD} or GND via a resistor if there is a possibility that it will be an output pin. All handling related to unused pins must be judged separately for each device and according to related specifications governing the device.

③ PRECAUTION AGAINST ESD

A strong electric field, when exposed to a MOS device, can cause destruction of the gate oxide and ultimately degrade the device operation. Steps must be taken to stop generation of static electricity as much as possible, and quickly dissipate it when it has occurred. Environmental control must be adequate. When it is dry, a humidifier should be used. It is recommended to avoid using insulators that easily build up static electricity. Semiconductor devices must be stored and transported in an anti-static container, static shielding bag or conductive material. All test and measurement tools including work benches and floors should be grounded. The operator should be grounded using a wrist strap. Semiconductor devices must not be touched with bare hands. Similar precautions need to be taken for PW boards with mounted semiconductor devices.

④ STATUS BEFORE INITIALIZATION

Power-on does not necessarily define the initial status of a MOS device. Immediately after the power source is turned ON, devices with reset functions have not yet been initialized. Hence, power-on does not guarantee output pin levels, I/O settings or contents of registers. A device is not initialized until the reset signal is received. A reset operation must be executed immediately after power-on for devices with reset functions.

- **The information in this document is current as of July, 2004. The information is subject to change without notice. For actual design-in, refer to the latest publications of NEC Electronics data sheets or data books, etc., for the most up-to-date specifications of NEC Electronics products. Not all products and/or types are available in every country. Please check with an NEC Electronics sales representative for availability and additional information.**
- No part of this document may be copied or reproduced in any form or by any means without the prior written consent of NEC Electronics. NEC Electronics assumes no responsibility for any errors that may appear in this document.
- NEC Electronics does not assume any liability for infringement of patents, copyrights or other intellectual property rights of third parties by or arising from the use of NEC Electronics products listed in this document or any other liability arising from the use of such products. No license, express, implied or otherwise, is granted under any patents, copyrights or other intellectual property rights of NEC Electronics or others.
- Descriptions of circuits, software and other related information in this document are provided for illustrative purposes in semiconductor product operation and application examples. The incorporation of these circuits, software and information in the design of a customer's equipment shall be done under the full responsibility of the customer. NEC Electronics assumes no responsibility for any losses incurred by customers or third parties arising from the use of these circuits, software and information.
- While NEC Electronics endeavors to enhance the quality, reliability and safety of NEC Electronics products, customers agree and acknowledge that the possibility of defects thereof cannot be eliminated entirely. To minimize risks of damage to property or injury (including death) to persons arising from defects in NEC Electronics products, customers must incorporate sufficient safety measures in their design, such as redundancy, fire-containment and anti-failure features.
- NEC Electronics products are classified into the following three quality grades: "Standard", "Special" and "Specific".

The "Specific" quality grade applies only to NEC Electronics products developed based on a customer-designated "quality assurance program" for a specific application. The recommended applications of an NEC Electronics product depend on its quality grade, as indicated below. Customers must check the quality grade of each NEC Electronics product before using it in a particular application.

"Standard": Computers, office equipment, communications equipment, test and measurement equipment, audio and visual equipment, home electronic appliances, machine tools, personal electronic equipment and industrial robots.

"Special": Transportation equipment (automobiles, trains, ships, etc.), traffic control systems, anti-disaster systems, anti-crime systems, safety equipment and medical equipment (not specifically designed for life support).

"Specific": Aircraft, aerospace equipment, submersible repeaters, nuclear reactor control systems, life support systems and medical equipment for life support, etc.

The quality grade of NEC Electronics products is "Standard" unless otherwise expressly specified in NEC Electronics data sheets or data books, etc. If customers wish to use NEC Electronics products in applications not intended by NEC Electronics, they must contact an NEC Electronics sales representative in advance to determine NEC Electronics' willingness to support a given application.

(Note)

(1) "NEC Electronics" as used in this statement means NEC Electronics Corporation and also includes its majority-owned subsidiaries.

(2) "NEC Electronics products" means any product developed or manufactured by or for NEC Electronics (as defined above).
