

Reflective photosensor (photoreflector)

RPR-359F

The RPR-359F is a reflective photosensor. The emitter is a GaAs infrared light emitting diode and the detector is a high-sensitivity, silicon planar phototransistor. A plastic lens is used for high sensitivity. In addition, since it is molded in plastic with a visible light filter, there is almost no effect from stray light.

●Applications

Copiers

Compact disc players

●Features

- 1) A plastic lens is used for high sensitivity.
- 2) A built-in visible light filter minimizes the influence of stray light.
- 3) Low collector-emitter saturation voltage.
- 4) Sturdy leads allow easy mounting.
- 5) Lightweight and compact.
