LA7520N

Monolithic Linear IC

(VIF+SIF) Circuit for TV, VTR Applications

The LA7520N is an IC containing the VIF section and SIF section on a single chip in the DIP30S package (equivalent to the DIP22 heretofore in use) of shrink type. Since the LA7520N is capable of performing video detection and sound detection independently or simultaneously, it can be applied to various sets from popular type to high-grade type according to the designer's policy. As compared with the LA7520, the LA7520N is more improved in differential gain, noise canceler characteristic. The LA7520 and LA7520N are compatible with each other.

Functions

VIF section: VIF amp, video detector, peak IF AGC, B/W noise canceler, RF AGC, AFT, SIF detector
SIF section: SIF limiter amp, FM detector, DC attenuator, AF driver

Features

- High-gain VIF amp requiring no preamp
- High AGC speed
- Provides wide-band detection characteristic and meets sound MPX demodulation requirements because of FM detection being quadrature detection.
- Possible to use sound REC pin (pin 2), AUX pin (pin 3)
- Possible to mute video, sound for VTR:
  Pin 7 GND: Muting of both video and sound
  Pin 29 GND: Muting of sound only

Maximum Ratings at Ta = 25°C

				unit
Maximum Supply Voltage	V_{CC} max		14	V
Flow-out Current	I_{22} max		5	mA
	I_6 max		3	mA
Allowable Power Dissipation	Pd max	Ta ≦ 45°C	1.5	W
Operating Temperature	Topg		−20 to +70	°C
Storage Temperature	Tstg		−55 to +125	°C
