DESCRIPTION

The SPX385-1.2 is a micropower 2-terminal band-gap voltage reference with a very wide operating current range from 10µA to 20mA that provides a stable voltage. The high stability of this device is primarily the result of the low temperature coefficient Thin Film Resistor process and Laser Trimming of the output voltage at the wafer level.

The SPX385-1.2 is available in a TO-92, SOIC-8 and SOT-89 package with an operating temperature range of -40°C to 85°C. A 2.5 volt device is also available - SPX385-2.5.

ABSOLUTE MAXIMUM RATINGS

Reverse Current (I_{KA})	30mA
Forward Current (I_{AK})	10mA
Operating Temperature Range (T_A)	-40 to +85°C
Continuos Power Dissipation at 25°C (P_D)	
TO-92	775mW
SOIC-8	750mW
SOT-89	1000mW
Junction Temperature (T_J)	150°C
Storage Temperature (T_{STG})	- 65 to 150°C
Lead Temperature (Soldering 10 sec.), T_L	300°C

Stresses greater than those listed under ABSOLUTE MAXIMUM RATINGS may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.
