General Description

The Supertex HV5812 is a 20-channel serial input vacuum fluorescent display driver. It combines a 20-bit CMOS shift register, data latches, and control circuitry with high voltage MOSFET outputs. The HV5812 is primarily designed for vacuum-fluorescent displays.

The CMOS shift register and latches allow direct interfacing with microprocessor-based systems. Data input rates are typically over 5.0MHz with 5V logic supply. Especially useful for inter-digit blanking, the BLANKING input disables the output source drives and turns on the sink drivers. Use with TTL may require external pull-up resistors to ensure an input logic high.

Absolute Maximum Ratings¹

V_{DD} logic power supply voltage	-0.5V to +7.5V	
V_{PP} positive high voltage supply	-0.5V to +90V	
Logic input voltages	-0.3V to V_{DD} +0.3V	
Operating junction temperature range	-40°C to +150°C	
Storage temperature	-55°C to +150°C	
Power dissipation	28-pin PLCC	1.9 Watt
	SOW-28	1.7 Watt
	28-pin DIP	2.0 Watt

Notes:

1. All voltages are referenced to ground. Absolute maximum ratings are those values at which damage to the device may occur. Functional operation under these conditions is not implied. Continuous operation of the device at the absolute rating level may affect device reliability.
