
T-1 3/4 (5 mm) Precision Optical Performance InGaN Bluish-Green LED Lamps

Technical Data

SunPower Series
HLMP-CE23
HLMP-CE24
HLMP-CE30
HLMP-CE31

Features

- **Smooth, Consistent Spatial Radiation Patterns**
- **High Luminous Output**
- **Choice of Three Minimum Luminous Intensities**
- **Viewing Angles: 23° and 30°**
- **Superior Resistance to Moisture**

Benefits

- **Viewing Angles Match Traffic Signal Requirements**
- **Superior Performance in Outdoor Environments**
- **Suitable for Autoinsertion onto PC Boards**

Applications

- **Traffic Signals**
- **Commercial Outdoor Signs**
- **Automotive Interior Lights**

Description

These high intensity bluish-green LEDs are based on InGaN material technology. InGaN is the most efficient and cost effective material for LEDs in the blue and green region of the spectrum. The 505 nm typical dominant wavelength matches international specifications for green traffic signals.

These LED lamps are untinted, nondiffused, T-1 3/4 packages incorporating second generation optics producing well defined spatial radiation patterns at specific viewing cone angles.

These lamps are made with an advanced optical grade epoxy, offering superior temperature and moisture resistance in outdoor signal and sign applications. The package epoxy contains both UV-a and UV-b inhibitors to reduce the effects of

long term exposure to direct sunlight.

These lamps are available in two viewing angle options and two package options to give the designer flexibility with optical design and device mounting.

Each part type includes three choices for minimum luminous intensity.

CAUTION: HLMP-CE_{xxx} LEDs are Class 1 ESD sensitive. Please observe appropriate precautions during handling and processing. Refer to Hewlett-Packard Application Note AN-1142 for additional details.

Notes:

1. All InGaN LEDs represented here are IEC825 Class 2. See *Application Brief 1009* and *1015* for details.
2. The dominant wavelength λ_d is derived from the CIE Chromaticity Diagram and represents the perceived color of the device.
3. $\theta_{1/2}$ is the off-axis angle where the luminous intensity is 1/2 the peak intensity.
4. Luminous efficacy is the ratio of luminous flux to radiant flux.
