**HLMP-CW11, HLMP-CW12, HLMP-CW26, HLMP-CW27,  
HLMP-CW36, HLMP-CW37**

## Description

These high intensity white LED lamps are based on InGaN material technology. A blue LED die is coated by phosphor to produce white. The typical resulting color is described by the coordinates  $x = 0.31$ ,  $y = 0.31$  using the 1931 CIE Chromaticity Diagram.

These T-1 ¾ lamps are untinted, non-diffused, and incorporate precise optics which produce well-defined spatial radiation patterns at specific viewing cone angle.

## Features

- Well defined spatial radiation pattern
- High luminous white emission
- Viewing angle: 15°, 23° and 30°
- Standoff or non-standoff leads
- Superior resistance to moisture

## Applications

- Electronic signs and signals
- Small area illumination
- Legend backlighting
- General purpose indicators

## Benefit

- Reduced power consumption, higher reliability, and increased optical/mechanical design flexibility compared to incandescent bulbs and other alternative white light sources.

*Caution: Devices are Class 1 ESD sensitive. Please observe appropriate precautions during handling and processing. Refer to Application Note AN-1142 for additional details.*

Notes:

1. Tolerance for luminous intensity measurement is +/- 15%
2. The luminous intensity is measured on the mechanical axis of the lamp package.
3. The optical axis is closely aligned with the package mechanical axis.
4. LED light output is bright enough to cause injuries to the eyes. Precautions must be taken to prevent looking directly at the LED without proper safety equipment.
5.  $2\theta_{1/2}$  is the off-axis angle where the luminous intensity is  $\frac{1}{2}$  the on axis intensity
