

Quad 1 of 2 Line Data Selector

This data selector/multiplexer contains inverters and drivers to supply full data selection to the four output gates. Four bits of data from two sources can be selected using the common Select (S) and Enable (\bar{E}) inputs. The Enable Input (\bar{E}) is active LOW. When \bar{E} is HIGH, all of the outputs (Y) are forced LOW regardless of all other inputs. The four buffered outputs present the selected data in the true (non-inverted) form.

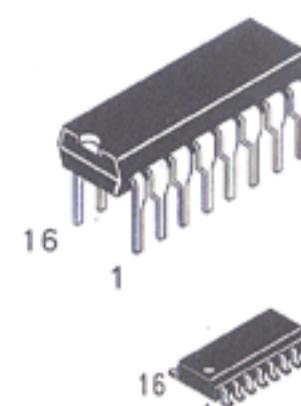

- AVG's LS operates over extended V_{CC} from 4.5 to 5.5 V
- AVG's LS and ALS both have guaranteed DC and AC specification over full temperature and V_{CC} range
- Switching specifications for ALS at 50 pF
- AVG's ALS has the lowest speed power product (4pJ per gate typical) of all logic series
