DESCRIPTION

A unique circuit design, state-of-the-art monolithic processing and advanced laser-trimming techniques are used to provide a low power amplifier with outstanding parameters—truly “instrumentation grade” performance over a wide voltage supply range.

The OPA21 consumes only 6.9mW of power at $V_{CC} = \pm 15V$ and 1.1mW at $V_{CC} = \pm 2.5V$ but offers far higher performance than MOS op-amps.

The OPA21 is internally compensated for unity-gain stability.
