## General Description

The EL1507C is a very low power dual operational amplifier designed for central office and customer premise line driving for DMT ADSL solutions. This device features a high drive capability of 400mA while consuming only 7.5mA of supply current per amplifier from  $\pm 12V$  supplies. This driver achieves a typical distortion of less than -75dBc, at 1MHz into a 50 $\Omega$  load. The EL1507C is available in the thermally-enhanced 16-pin SO package, as well as a 16-pin LPP package. Both are specified for operation over the full -40°C to +85°C temperature range.

The EL1507C has two control pins, C0 and C1. With the selection of C0 and C1, the device can be set into full-I<sub>S</sub> power,  $\frac{3}{4}$ -I<sub>S</sub> power,  $\frac{1}{2}$ -I<sub>S</sub> power, and power down disable modes. The EL1507C maintains excellent distortion and load driving capabilities even in the lowest power settings.
