SOLDERING CONDITIONS

Soldering iron

3 s maximum at 300 °C

Vapor-phase soldering

215 °C, less than 35 s

Infrared reflow soldering

The temperature profile shown at right is recommended for reflow soldering. However, process carefully in case of infrared heater, because the absorption rate of the object may vary according to its color, material, etc. and thus heating rate can be different. Please note that the surface temperature of the product should not exceed 240 °C. When the product temperature exceeds 250 °C, deformation may occur due to heat.

$T_p \leq 240\text{ }^{\circ}\text{C}$ (Peak temperature)

$T_m = 180\text{ }^{\circ}\text{C}$ (Melting point temperature)

$t_m \leq 10\text{ s}$ (Melting time)
