

**NEGATIVE VOLTAGE REGULATORS**

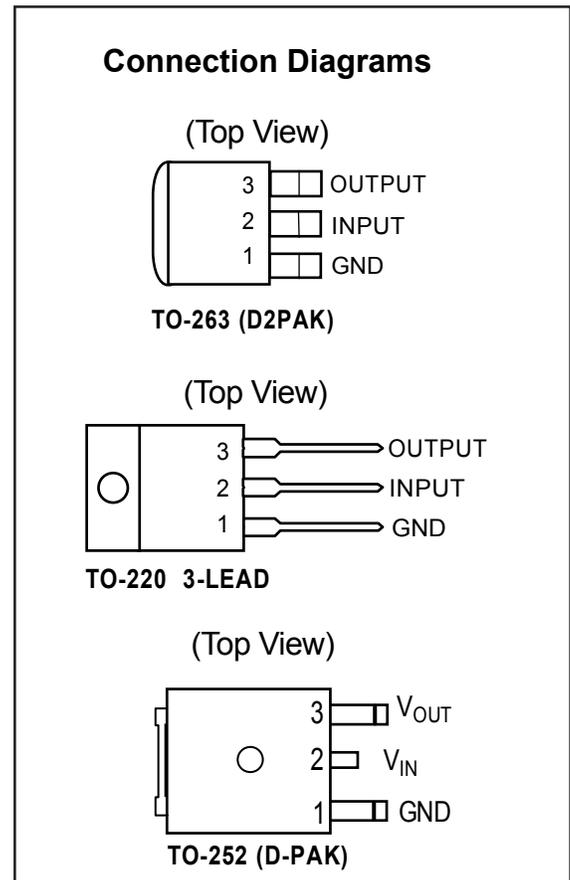

- Output current up to 1.5A
- 3-Terminal Regulators
- Internal Thermal Overload Protection
- Output Voltages -5V, -6V, -8V, -12V, -15V, -18V and -24V
- Offer in TO-220, TO-252 and TO-263
- Internal Short-Circuit Current Limiting
- Output Transistor Safe-Area Compensation
- Direct replacements for LM79xx

The GM7900 series are classic regulators useful in a wide range of applications. For example, you can use them for local on-card regulation to eliminate the distribution problems associated with single point regulation.

The wide range of output voltages (-5V to -24V) make them useful in an endless list of applications. Although designed as fixed voltage regulators, you can add a few external components to make adjustable voltages and currents.

Current limiting prevents the peak output current to a safe value. Safe-area protection for the output transistor limits internal power dissipation. If internal power dissipation becomes too high for the heat sinking provided, the thermal shutdown circuit activates to prevent the regulator from overheating. These versatile workhorses are easy to use.

The GM7900 series is available in TO-220, TO-252 and TO-263 packages.

**Applications:**

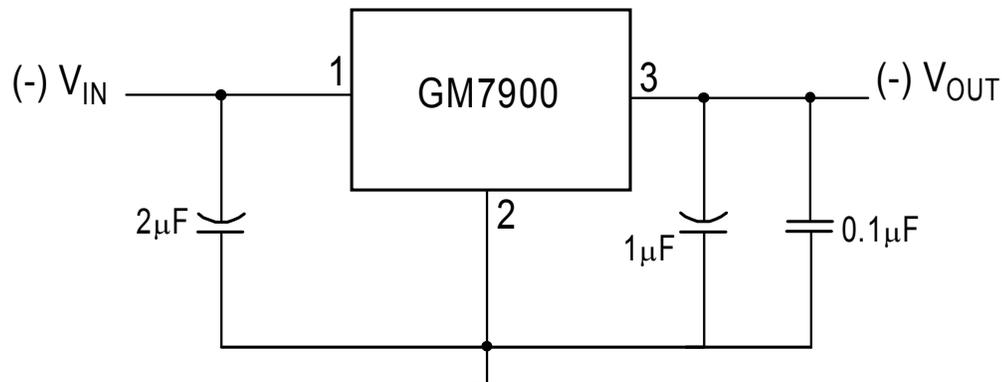

- Post-Regulator Switching DC/DC Converters
- Bias Supply for Analog Circuits
- Instrumentation and Audio Systems
- Logic Systems
- Others too numerous to mention

**Absolute Maximum Ratings:**

Rating		Value	Unit
Input Voltage	GM7924	-40	V
	All others	-35	
Continuous Total Dissipation at 25°C free-air temperature		2	W
Continuous Total Dissipation at (or below) 25°C case temperature		15	
Operating free-air, case, or virtual junctions Temperature Range		0 to +150	°C
Storage Temperature Range		-65 to +150	
Lead Temperature 1.6mm (1/16 inch) from case for 10 seconds		260	

**NEGATIVE VOLTAGE REGULATORS**
**■ Recommended Operating Conditions**

PARAMETER		SYMBOL	MIN	MAX	UNIT
Input Voltage	GM7905	$V_I$	-7.0	-25.0	V
	GM7906		-8.0	-25.0	
	GM7908		-10.5	-25.0	
	GM7912		-14.5	-30.0	
	GM7915		-17.5	-30.0	
	GM7918		-21.0	-33.0	
	GM7924		-27.0	-38.0	
Output Current		$I_o$	-	1.5	A
Operating Virtual Junction Temperature		$T_J$	0	125	°C

**TYPICAL APPLICATION**

When using a negative voltage regulator, bypass capacitors are a must on both the input and output. Recommended values are 2µF on the input and 1µF on the output. It is considered a good practice to include a 0.1µF capacitor on the output to improve the transient response. These capacitors can be mylar, ceramic or tantalum, provided that they have good high frequency characteristics.

**NEGATIVE VOLTAGE REGULATORS**
**■ GM7905 ELECTRICAL CHARACTERISTICS at specified Junction Temperature**
 $V_I = -10V, I_O = 500mA$  (unless otherwise noted)

PARAMETER	TEST CONDITIONS*	MIN	TYP	MAX	UNIT	
Output Voltage**		25°C	-4.8	-5	-5.2	V
