# D-configuration Connectors for Digital Broadcasting Equipment

## DXLM Series

Accepts panel thickness up to 3 mm

DXM Series  
(Panel thickness up to 1.6 mm thick)

DXLM Series

### ■ Features

#### 1. Increased range of the mounting panel thickness

Extension of the mating and locking area by 1.5 mm has allowed the DXLM Series to be mounted on panels up to 3mm thick.

#### 2. Effective protection against electrostatic discharge

Unique Hirose Electric design makes reliable ground connection in sequence, with metal shell first, then the board circuit.

#### 3. Temporary board holding feature

Deflecting force of the side protrusion of the insulator's posts against the walls of holes provides superior retention to the board, preventing leaning forward during handling.

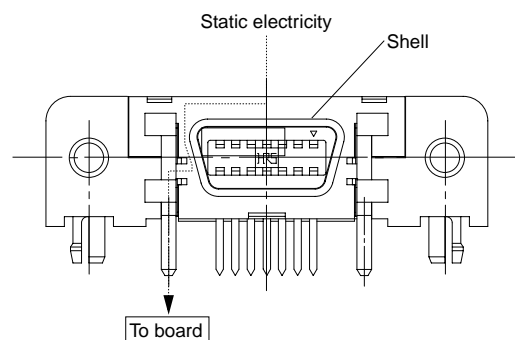

#### 4. Superior stability and retention to the board

Solid metal grounding posts are soldered to the board. This creates extremely strong retention to the board, allowing the assembly to retain reliable connections, even when large forces are applied when miss-mating or pulling.

#### 5. RC-5237, EIAJ Standard

Conforms to the requirements for D-configuration connector used in connections for digital image broadcast.

Effective protection against electrostatic discharge

Superior stability and retention to the board

### ■ Applications

TV, STB, DVD, LCD TV and other equipment supporting digital broadcasts
