

# ICS671-01

## Zero Delay, Low Skew Buffer and Multiplier

### Description

The ICS671-01 is a low phase noise, high speed PLL based, 8 output, low skew zero delay buffer and multiplier. Based on ICS's proprietary low jitter Phase Locked Loop (PLL) techniques, the device provides eight low skew outputs at speeds up to 160 MHz at 3.3 V. The ICS671-01 includes a bank of six outputs running at either x2 or x4 mode, one output running at either x2, x4, or x5 mode, and one more output running at either x1, x2, or x4 mode. For normal operation, output clock CLK8 is tied to the FBIN pin.

ICS manufactures the largest variety of clock generators and buffers, and is the largest clock supplier in the world.

### Features

- Packaged in 16 pin narrow SOIC
- Clock outputs from 5 to 160 MHz
- Zero input-output delay
- Integrated x2 or x4 selections, and x5 for CLK7
- Eight low-skew (<250 ps) outputs
- Full CMOS outputs with 25 mA output drive capability at TTL levels
- Tri-state mode for board-level testing
- Advanced, low power, sub-micron CMOS process
- 3.3 V to 5 V operating voltage

### Output Clock Mode Select Table

| S1 | S0 | CLK1:6                     | CLK7                       | CLK8                       | Input range   |
|----|----|----------------------------|----------------------------|----------------------------|---------------|
| 0  | 0  | Tri-state (high impedance) | Tri-state (high impedance) | Tri-state (high impedance) | -             |
| 0  | 1  | x2                         | x5                         | x1                         | 5 to 30 MHz   |
| 1  | 0  | x2                         | x2                         | x2                         | 15 to 80 MHz  |
| 1  | 1  | x4                         | x4                         | x4                         | 7.5 to 40 MHz |

### Pin Descriptions

| Number             | Name   | Type | Description  |
|--------------------|--------|------|--|
| 1                  | CLKIN  | I    | Clock Input.   |
| 2, 3, 6, 7, 10, 11 | CLK1:6 | O    | Clock Outputs 1:6. See above table.                                    |
| 4, 13              | VDD    | P    | Power supply. Connect both pins to same voltage (either 3.3 V or 5 V). |
| 5, 12              | GND    | P    | Connect to ground.   |
| 8                  | S0     | I    | Select input 0. See table above.                                       |
| 9                  | S1     | I    | Select input 1. See table above.                                       |
| 14                 | CLK7   | I    | Clock Output 7. See table above.                                       |
| 15                 | CLK8   | I    | Clock Output 8. See table above. Normally use this clock as feedback.  |
| 16                 | FBIN   | I    | Feedback Input. Connect to CLK8 under normal operations.               |

Key: I = Input; O = output; P = power supply connection.

### External Components

The ICS671-01 requires a minimum number of external components for proper operation. Decoupling capacitors of 0.01 $\mu$ F should be connected between VDD and GND on pins 4 and 5, and VDD and GND on pins 13 and 12, as close to the device as possible. A series termination resistor of 33  $\Omega$  may be used close to each clock output pin to reduce reflections.

| <b>AC CHARACTERISTICS (VDD = 3.3 V unless specified otherwise)</b> |                       |         |         |         |       |
| Input Clock Frequency  | See table on page 2   | 5       |         | 80      | MHz   |
| Output Clock Frequency   | See table on page 2   | 5       |         | 160     | MHz   |
| Output Clock Rise Time, CL=30pF                                    | 0.8 to 2.0V           |         |         | 1.5     | ns    |
| Output Clock Fall Time, CL=30pF                                    | 2.0 to 0.8V           |         |         | 1.5     | ns    |
| Output Clock Duty Cycle, VDD=3.3V                                  | At VDD/2              | 40      | 50      | 60      | %     |
| Device to Device Skew, equally loaded                              | rising edges at VDD/2 |         |         | 700     | ps    |
| Output to Output Skew, equally loaded                              | rising edges at VDD/2 |         |         | 250     | ps    |
| Input to Output Skew, FBIN to CLK8                                 | rising edges at VDD/2 |         |         | ±350    | ps    |
| Maximum Absolute Jitter  |                       |         | 300     |         | ps    |
| Cycle to Cycle Jitter, 30pF loads                                  |                       |         |         | 500     | ps    |

- Notes: 1. Stresses beyond those listed under Absolute Maximum Ratings could cause permanent damage to the device. Prolonged exposure to levels above the operating limits but below the Absolute Maximums may affect device reliability.
2. With CLKIN = 20 MHz, FBIN to CLK8, all outputs at 40 MHz.
3. With CLKIN = 80 MHz, FBIN to CLK8, all outputs at 160 MHz.
