

155Mbps ATM Adapter Family in PCI Mezzanine Card (PMC) Form-Factor

PRELIMINARY
IDT7M9130
IDT7M9131
IDT7M9132

FEATURES:

- **Bus Interface:** 33Mhz, 5V, 32-bit PCI bus version 2.1 Electrical Compliance
- **Form-Factor:** Single-Size Common Mezzanine Card (74mm x 149mm). Full Dimensional Compliance to Common Mezzanine Card Specification IEEE P1386 v.2.0.
- **155Mbps Fiber optical interface.**
 - Multimode (7M9130)
 - Single mode intermediate distance(7M9131)
 - Single mode long distance (7M9132)
- **Consult factory for availability of UTP-5 interface version**
- **Full Software Compatibility with IDT77914 and IDT77915 ATM reference cards**
- **Third Party Software available:**

DESCRIPTION:

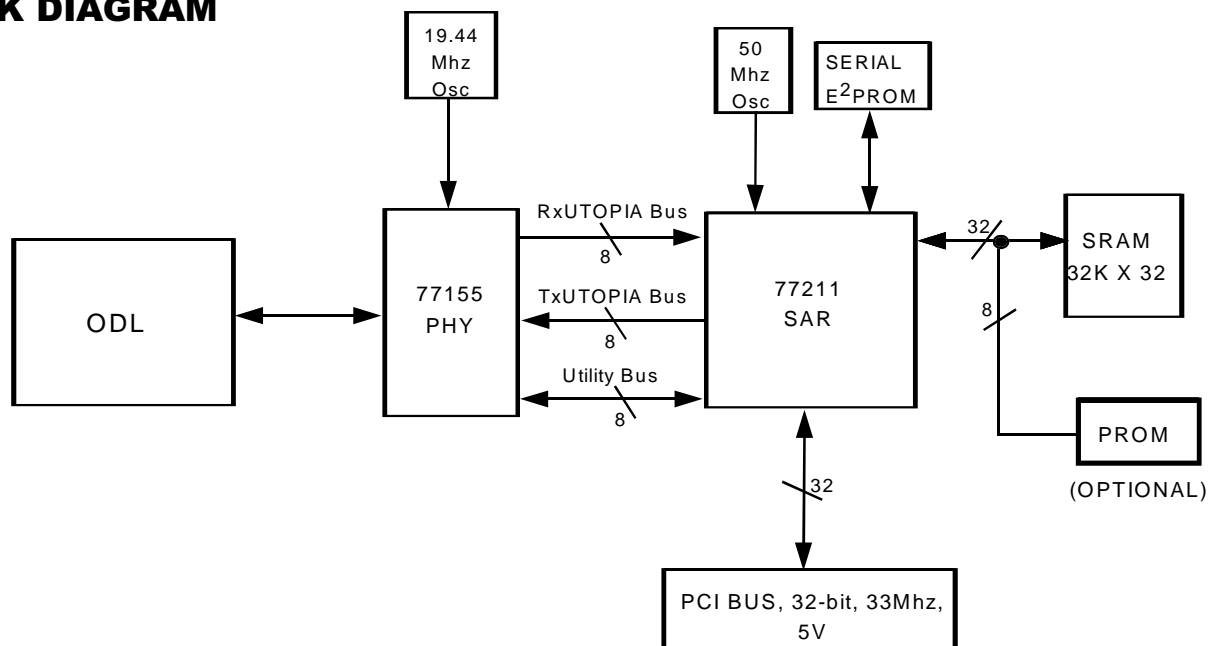

The IDT7M9130/31/32 provide reliable, high performance Asynchronous Transfer Mode connectivity for PCI Mezzanine Card (PMC)-based systems. The IDT7M9130/31/32 is designed for mechanical and electrical compliance with the Common Mezzanine Card Specification (IEEE1386) and the PCI Mezzanine Card Specification (IEEE1386.1). This low-profile I/O card is ideally suited to serve as an ATM Uplink on a Fast Ethernet switch or as ATM I/O card mounted on a standard VME or Compact PCI Single Board Computer.

OVERVIEW:

The central component of the IDT7M9130/31/32 is the IDT77211 NICSTAR™ Segmentation and Reassembly (SAR) controller. The IDT77211 SAR connects directly to the PCI bus, a private SRAM/EPROM bus, and the Utopia PHY interface. The IDT77211's PCI bus master interface provides efficient, low latency DMA transfer capability over PCI. For further information on the IDT77211 refer to the IDT77211 Datasheet located on the IDT website (www.idt.com).

The IDT77155 PHY chip provides the SONET/SDH processing and ATM mapping functions of a 155Mbps ATM User Network Interface. The IDT77155 provides both Transmission Convergence (TC) and Physical Media Dependent (PMD) sublayer functions and supports a UTOPIA interface. For further information on the IDT77155 refer to the IDT77155 Datasheet located on the IDT website(www.idt.com).

NOTES:

1. These signals are not connected (NC) on the IDT7M9130/31/32.
2. +3.3V is not used by the IDT7M9130/31/32; however, it is decoupled on the board.
