## Features

- Constant ON/OFF signals to  $\pm 10V$  (DG182, DG185, DG188), to  $\pm 7.5V$  (All Devices)
- $\pm 15V$  Power Supplies
- $< 2nA$  Leakage from Signal Channel in Both ON and OFF States
- TTL, DTL, RTL Direct Drive Compatibility
- $t_{ON}, t_{OFF} < 150ns$ , Break-Before-Make Action
- Cross-Talk and Open Switch Isolation  $> 50dB$  at 10MHz (75 $\Omega$  Load)

## High-Speed Drivers with JFET Switch

## Description

The DG181 thru DG191 series of analog gates consist of 2 or 4 N-channel junction-type field-effect transistors (JFET) designed to function as electronic switches. Level-shifting drivers enable low-level inputs (0.8V to 2V) to control the ON-OFF state of each switch. The driver is designed to provide a turn-off speed which is faster than turn-on speed, so that break-before-make action is achieved when switching from one channel to another. In the ON state, each switch conducts current equally well in both directions. In the OFF condition, the switches will block voltages up to 20V peak-to-peak. Switch-OFF input-output isolation 50dB at 10MHz, due to the low output impedance of the FET-gate driving circuit.

NOTES:

1. See Switching State Diagrams for V<sub>IN</sub> "ON" and V<sub>IN</sub> "OFF" Test Conditions.
2. Normally the minimum signal handling capability of the DG181 thru DG191 family is 20V peak to peak for the 75Ω switches and 15V peak-to-peak for the 30Ω (refer I<sub>D</sub> and I<sub>S</sub> tests above).
3. For other Analog Signals, the following guidelines can be used: proper switch turn-off requires that  $V_- \leq V_{ANALOG(peak)} - V_P$  where  $V_P = 7.5V$  for the 80Ω switches and  $V_P = 5.0V$  for 75Ω switches e.g., -10V minimum (-peak) analog signal and a 75Ω switch ( $V_P = 5V$ ), requires that  $V_- \leq -10V - 5V = -15V$ .

## NOTES:

1. Index area: A notch or a pin one identification mark shall be located adjacent to pin one and shall be located within the shaded area shown. The manufacturer's identification shall not be used as a pin one identification mark.
2. The maximum limits of lead dimensions b and c or M shall be measured at the centroid of the finished lead surfaces, when solder dip or tin plate lead finish is applied.
3. Dimensions b1 and c1 apply to lead base metal only. Dimension M applies to lead plating and finish thickness.
4. Corner leads (1, N, N/2, and N/2+1) may be configured with a partial lead paddle. For this configuration dimension b3 replaces dimension b2.
5. Dimension Q shall be measured from the seating plane to the base plane.
6. Measure dimension S1 at all four corners.
7. Measure dimension S2 from the top of the ceramic body to the nearest metallization or lead.
8. N is the maximum number of terminal positions.
9. Braze fillets shall be concave.
10. Dimensioning and tolerancing per ANSI Y14.5M - 1982.
11. Controlling dimension: INCH.
