

## 300mA ULTRA LOW DROPOUT POSITIVE ADJUSTABLE AND FIXED REGULATORS

### FEATURES

- SOT-23 Package
- Stable with 2.2μF Ceramic Capacitor
- 1% Voltage Reference Accuracy
- Only 270mV Dropout at 300mA and 170mV Dropout at 150mA
- 5μA Quiescent Current in Shutdown
- Current Limit and Thermal Shutdown
- Logic Input Enable Pin

### APPLICATIONS

- Laptop, Notebook & Palmtop computers
- Battery Powered Equipments
- PCMCIA Vcc & Vpp Regulator
- Consumer Electronics
- High Efficiency Linear Power Supplies

### DESCRIPTION

The IRU1205 device is an efficient linear voltage regulator with better than 1% initial voltage accuracy, very low dropout voltage and very low ground current designed especially for hand held, battery powered applications. Other features of the device are: TTL compatible enable/shutdown control input, current limiting and thermal shutdown.

The IRU1205 is available in fixed and adjustable output voltage versions in a small SOT-23 5-Pin package.

### TYPICAL APPLICATION

## ELECTRICAL SPECIFICATIONS

Unless otherwise specified, these specifications apply over  $C_N=C_O=22\mu\text{F}$ ,  $I_O=100\mu\text{A}$ ,  $V_{IN(MIN)}=2.5\text{V}$  (Adjustable devices)  $V_{IN}=V_O + 1\text{V}$  (for fixed voltage devices),  $V_{OUT}=V_{FB}$  (for adjustable version only),  $C_{BYP}=470\text{pF}$  (for AT18, AT25, AT28, AT30, AT33 and AT36),  $V_{ENB}=2\text{V}$  and  $T_A=25^{\circ}\text{C}$ . Typical values refer to  $T_A=25^{\circ}\text{C}$ . Low duty cycle pulse testing is used which keeps junction and case temperatures equal to the ambient temperature.

**Note 1:** Low duty cycle pulse testing with Kelvin connections is required in order to maintain accurate data.

**Note 2:** Dropout voltage is defined as the minimum differential voltage between  $V_{IN}$  and  $V_{OUT}$  required to maintain regulation at  $V_{OUT}$ . It is measured when the output voltage drops 1% below its nominal value.

**Note 3:** Ground current is the regulator quiescent current plus the pass transistor current. The total current from the supply is the sum of the load current plus the ground pin current.

**Note 4:** The specification applies for the junction temperature of 0 to +125°C.

## PIN DESCRIPTIONS

PIN #	PIN SYMBOL	PIN DESCRIPTION
1	$V_{IN}$	The input pin of the regulator. Typically a large storage capacitor is connected from this pin to ground to insure that the input voltage does not sag below the minimum drop out voltage during the load transient response. This pin must always be higher than $V_{OUT}$ by at least the amount of the dropout voltage and some margin in order for the device to regulate properly.
2	Gnd	Ground pin. This pin must be connected to the lowest potential in the system and all other pins must be at higher potential with respect to this pin.
3	En	Enable pin. A low signal or left open on this pin shuts down the output. This pin must be tied HI or to $V_{IN}$ for normal operation.
4	Adj (Adjustable Only)	A resistor divider from this pin to the $V_{OUT}$ pin and ground sets the output voltage. To minimize the error due to the error amplifier, select the values of the resistor dividers to be less than 10KΩ.
4	$C_{BYP}$ (Fixed Only)	A 470 to 1000pF bypass capacitor connected to this pin reduces the output noise.
5	$V_{OUT}$	The output of the regulator. A minimum of 2.2μF with max ESR of 1Ω capacitor must be connected from this pin to ground to insure stability.

5-PIN SOT-23	Output Voltage
IRU1205	1.25V
IRU1205-18	1.8V
IRU1205-25	2.5V
IRU1205-28	2.8V
IRU1205-30	3.0V
IRU1205-33	3.3V
IRU1205-36	3.6V

Table 1- Nominal output voltage vs. part number.

The output voltage of the adjustable device can be set using:

$$V_o = 1.25 \times \left( 1 + \frac{R_1}{R_2} \right)$$

Where:

R1 = Resistor connected from output to the Adj pin

R2 = Resistor connected from Adj pin to Gnd
