

## FEATURES

- *Guaranteed* 10 ppm/°C temperature coefficient
- *Guaranteed* 1.0Ω max. dynamic impedance
- *Guaranteed* 20μV max. wideband noise
- Wide operating current range 0.6mA to 15mA

## APPLICATIONS

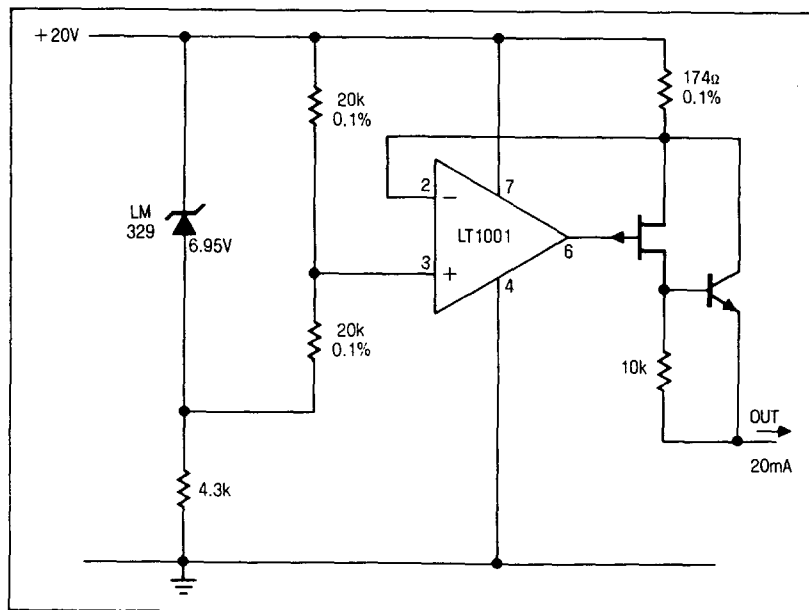

- Transducers
- A/D and D/A Converters
- Calibration Standards
- Instrumentation Reference

## DESCRIPTION

The LM129 temperature compensated 6.9 Volt zener references provide excellent stability over time and temperature, very low dynamic impedance and a wide operating current range. The device achieves low dynamic impedance by incorporating a high gain shunt regulator around the zener. The excellent noise performance of the device is achieved by using a "buried zener" design which eliminates surface noise phenomenon associated with ordinary zeners. To serve a wide variety of applications, the LM129 is available in several temperature coefficient grades and two package styles. A 20mA positive current source application is shown below.

20mA Positive Current Source

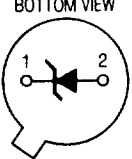

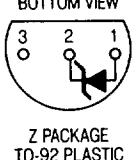

Reverse Voltage Change

## ABSOLUTE MAXIMUM RATINGS

Reverse Breakdown Current	30mA
Forward Current	2mA
Operating Temperature Range	
LM129	−55°C to 125°C
LM329	0°C to 70°C
Storage Temperature Range	
LM129	−65°C to 150°C
LM329	−65°C to 150°C
Lead Temperature (Soldering, 10 sec.)	300°C
