

TTL Compatible CMOS Analog Switches

General Description

Maxim's DG300-DG303 and DG300A-DG303A CMOS dual and quad analog switches combine low power operation with fast switching times and superior DC and AC switch characteristics. On-resistance is less than 50Ω and is essentially constant over the analog signal range. Device specifications are ideal for battery-powered circuitry.

These switches are available in a variety of formats as outlined in the *Pin Configurations* section. The switch control logic inputs are fully TTL and CMOS compatible. Also featured are "break-before-make" switching and low charge injection.

Maxim's DG300-DG303 and DG300A-DG303A families are electrically compatible and pin compatible with the original manufacturer's devices. All devices operate with power supplies ranging from $\pm 5V$ to $\pm 18V$. Single-supply operation is implemented by connecting V^- to GND.

Applications

Portable Instruments
Low-Power Sample/Holds
Power-Supply Switching
Programmable Gain Amplifiers
SPDT and DPDT Functions
Process Control and Telemetry

Features

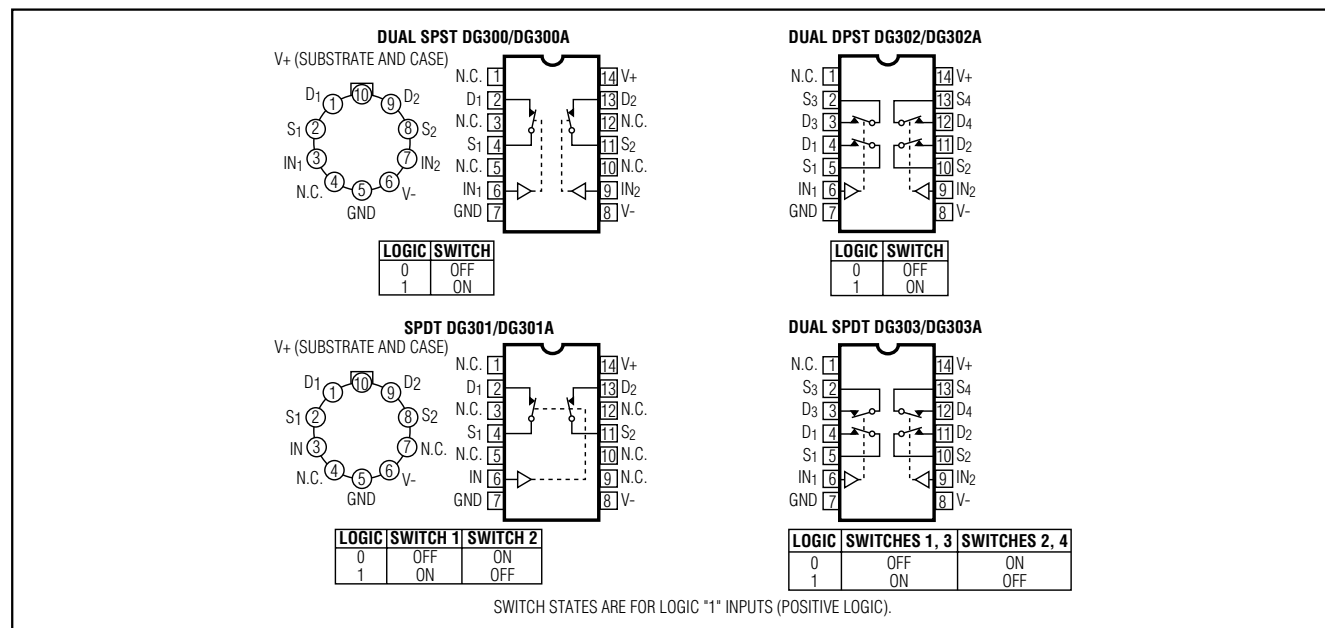

- ◆ Monolithic Low-Power CMOS
- ◆ Latchup Proof Construction
- ◆ Fully Compatible 2nd Source
- ◆ Low On-Resistance, $<50\Omega$
- ◆ Fast Switching Time
- ◆ V^+ to V^- Analog Signal Range
- ◆ Single-Supply Capability

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

TTL Compatible CMOS Analog Switches

ELECTRICAL CHARACTERISTICS (Over Temperature) (continued)

($V_+ = +15V$, $V_- = -15V$, GND = 0V, $T_A =$ Over Temperature Range, unless otherwise noted.)

Note 1: Signals on S_X , D_X , or IN_X exceeding V_+ or V_- are clamped by internal diodes. Limit diode forward current to maximum current ratings.

Note 2: The algebraic convention whereby the most negative value is a minimum, and the most positive value is a maximum is used in this data sheet.

Note 3: Typical values are for DESIGN AID ONLY, not guaranteed nor subject to production testing.

Note 4: OFF-isolation = $20 \log \frac{V_S}{V_D}$, V_S = input to OFF switch, V_D = output.

Typical Operating Characteristics

($T_A = +25^\circ C$, unless otherwise noted.)

Input Logic Levels		0.8V, 4.0V	0.8V, 4.0V	0.8V, 4.0V	0.8V, 4.5V

Applications Information

All DG300 family switches will operate with $\pm 5V$ to $\pm 15V$ power supplies. They can also be used with single-ended power supplies ranging from +10V to +30V where the V-terminal is connected to ground. In either case, analog signals ranging from V+ to V- can be switched.

The on-resistance variation with analog signal and supply voltage is shown in the *Typical Operating Characteristics*. The temperature coefficient of R_{ON} is typically 0.5%/°C. Typical on-resistance matching from channel to channel is 10%. In addition, Table 1 outlines some typical parameters for single-supply operation.

Table 2. Charge Injection ($\pm 15V$ Supplies)

ANALOG INPUT (V)	INJECTED Q (pC)
+10	4
+5	8
0	12
-5	8
-10	5

The charge injection test circuit is shown in Figure 1. Table 2 lists the typical injected charge for DG300 series switches with various input voltages.
