

The Infinite Bandwidth Company™

MIC820

Teeny™ Ultra Low Power Op Amp

Final Information

General Description

The MIC820 is a rail-to-rail output, operational amplifier in *Teeny™* SC70 packaging. The MIC820 provides 5MHz, -3dB bandwidth while consuming an incredibly low 22µA supply current.

The SC70 packaging achieves significant board space savings over devices packaged in SOT-23 or MSOP-8 packaging. The SC70 occupies approximately half the board area of a SOT-23 package.

Features

- *Teeny™* SC70 packaging
- 5MHz, -3dB bandwidth product
- 4MHz gain-bandwidth product
- 22µA supply current
- Rail-to-Rail output
- Ground sensing at input common mode to GND
- Common mode to GND
- Drive large capacitive loads

Applications

- Portable equipment

Note 1. Exceeding the absolute maximum rating may damage the device.

Note 2. The device is not guaranteed to function outside its operating rating.

Note 3. Devices are ESD sensitive. Handling precautions recommended. Human body model, 1.5k in series with 100pF. Pin 4 is ESD sensitive

Note 4. Exceeding the maximum differential input voltage will damage the input stage and degrade performance (in particular, input bias current is likely to increase).

Note 5. Supply Voltage change of 1V.

Applications Information

Power Supply Bypassing

Regular supply bypassing techniques are recommended. A 10 μ F capacitor in parallel with a 0.1 μ F capacitor on both the positive and negative supplies are ideal. For best performance all bypassing capacitors should be located as close to the op amp as possible and all capacitors should be low ESL (equivalent series inductance), ESR (equivalent series resistance). Surface-mount ceramic capacitors are ideal.
