

FEATURES

- Guaranteed >3GHz bandwidth over temperature
- Guaranteed <440ps propagation delay
- 3.3V and 5V power supply options
- Wide operating temperature range: -40°C to +85°C
- Available in 8-pin (3mm) MSOP and SOIC package

ECL Pro™

PIN CONFIGURATION/BLOCK DIAGRAM

8-Pin MSOP and SOIC Packages

DESCRIPTION

The SY10EP31V is a D flip-flop with set and reset. The device is pin and functionally equivalent to the EL31 and LVEL31 devices. With AC performance much faster than the EL31 and LVEL31 devices, the EP31V is ideal for applications requiring the fastest AC performance available. Both SET and RESET inputs are asynchronous, level triggered signals. Data enters the master portion of the flip-flop when CLK is low and is transferred to the slave, and thus the outputs, upon a positive transition of the CLK.

PIN NAMES

Pin	Function
CLK	ECL Clock Inputs
RESET	ECL Asynchronous Reset
SET	ECL Asynchronous Set
D	ECL Data Input with Internal 75kΩ Pull-Down Resistor, Default State is LOW.
Q, /Q	ECL Data Outputs
V _{CC}	Positive Supply
V _{EE}	Negative, 0 Supply

Note 1. Permanent device damage may occur if ABSOLUTE MAXIMUM RATINGS are exceeded. This is a stress rating only and functional operation is not implied at conditions other than those detailed in the operational sections of this data sheet. Exposure to ABSOLUTE MAXIMUM RATING conditions for extended periods may affect device reliability.
