

DESCRIPTION

The LX5506B is a power amplifier optimized for the FCC Unlicensed National Information Infrastructure (U-NII) band, HyperLAN2 and Japan WLAN applications in the 4.9-5.85 GHz frequency range. The PA is implemented as a three-stage monolithic microwave integrated circuit (MMIC) with active bias, on-chip input matching and output pre-matching. It also features an on-chip output power detector to help reduce BOM cost and PCB board space for system implementations. The device is manufactured with an InGaP/GaAs Heterojunction Bipolar Transistor (HBT) IC process (MOCVD). It operates with a single positive voltage

supply of 3.3V (nominal), with +26dBm of P1dB and up to 25dB power gain in the 5.15 - 5.85GHz frequency range with a simple output matching capacitor pair.

LX5506B is available in a 16-pin 3mmx3mm micro-lead package (MLP). The compact footprint, low profile, and excellent thermal capability of the MLP package makes the LX5506B an ideal solution for broadband, high-gain power amplifier requirements for IEEE 802.11a, and HyperLAN2 portable WLAN applications.

FUNCTIONAL PIN DESCRIPTION

Name	Pin #	Description
RF IN	2, 3	RF input for the power amplifier. This pin is DC-shorted to GND but AC-coupled to the transistor base of the first stage.
VCC	4	Supply voltage for the bias reference and control circuits. This pin can be combined with VC1, VC2 and VC3 pins, resulting in a single supply voltage (referred to as Vc).
VB1	5	Bias control voltage for the first stage.
VB2	6	Bias control voltage for the second stage.
VB3	7	Bias control voltage for the third stage.
DET	9	Detector output for the third stage PA output power.
RF OUT	10, 11	RF output for the power amplifier. This pin is DC-blocked from the collector of the output stage.
VC1	16	DC supply voltage for the first stage amplifier.
VC2	15	DC supply voltage for the second stage amplifier.
VC3	14	DC supply voltage for the third stage amplifier.
GND	Center Metal	The center metal base of the MLP package provides both DC/RF ground as well as heat sink for the power amplifier.
NC	1, 8, 12, 13	These pins are unused and not connected to the device inside the package. They can be treated either as open (floating) pins, or connected to ground metal.
