## DESCRIPTION

M2V56S20TP is a 4-bank x 16777216-word x 4-bit,  
 M2V56S30TP is a 4-bank x 8388608-word x 8-bit,  
 M2V56S40TP is a 4-bank x 4194304-word x 16-bit,  
 synchronous DRAM, with LVTTL interface. All inputs and outputs are referenced to the rising edge of CLK. The M2V56S20/30/40TP achieve very high speed data rate up to 100MHz (-7/-8) , 133MHz (-6), and are suitable for main memory or graphic memory in computer systems.

## FEATURES

- Single 3.3v±0.3V power supply
- Max. Clock frequency 100MHz(-7/-8), 133MHz (-6)
- Fully Synchronous operation referenced to clock rising edge
- Single Data Rate
- 4 bank operation controlled by BA0, BA1 (Bank Address)
- /CAS latency- 2/3 (programmable)
- Burst length- 1/2/4/8/full page (programmable)
- Burst type- sequential / interleave (programmable)
- Random column access
- Auto precharge / All bank precharge controlled by A10
- 8192 refresh cycles /64ms (4 banks concurrent refresh)
- Auto refresh and Self refresh
- Row address A0-12 / Column address A0-9,11(x4)/ A0-9(x8)/ A0-8(x16)
- LVTTL Interface
- 400-mil, 54-pin Thin Small Outline Package (TSOP II) with 0.8mm lead pitch

	Max. Frequency @CL2	Max. Frequency @CL3	Standard
M2V56S20/30/40TP-6	100MHz	133MHz	PC133 (CL3)
M2V56S20/30/40TP-7	100MHz	100MHz	PC100 (CL2)
M2V56S20/30/40TP-8	77MHz	100MHz	PC100 (CL3)

## M2V56S20/ 30/ 40/ TP -6, -7, -8

256M Synchronous DRAM

### PIN FUNCTION

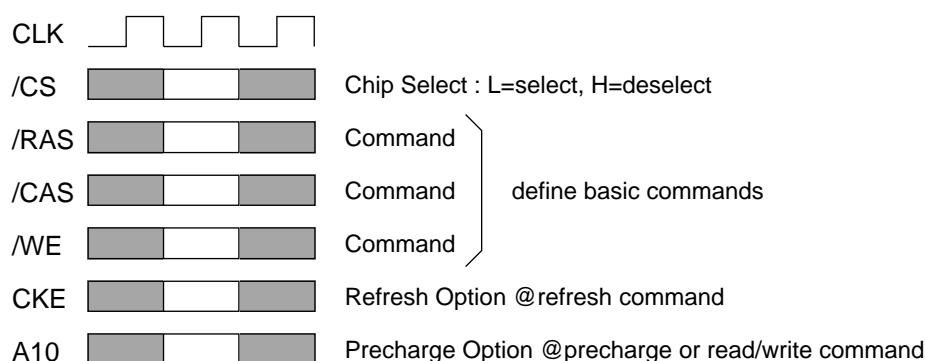

CLK	Input	Master Clock: All other inputs are referenced to the rising edge of CLK.
CKE	Input	Clock Enable: CKE controls internal clock. When CKE is low, internal clock for the following cycle is ceased. CKE is also used to select auto / self refresh. After self refresh mode is started, CKE becomes asynchronous input. Self refresh is maintained as long as CKE is low.
/CS	Input	Chip Select: When /CS is high, any command means No Operation.
/RAS, /CAS, /WE	Input	Combination of /RAS, /CAS, /WE defines basic commands.
A0-12	Input	A0-12 specify the Row / Column Address in conjunction with BA0,1. The Row Address is specified by A0-12. The Column Address is specified by A0-9,11. A10 is also used to indicate precharge option. When A10 is high at a read / write command, an auto precharge is performed. When A10 is high at a precharge command, all banks are precharged.
BA0,1	Input	Bank Address: BA0,1 specifies one of four banks to which a command is applied. BA0,1 must be set with ACT, PRE, READ, WRITE commands.
DQ0-15	Input / Output	Data In and Data out are referenced to the rising edge of CLK.
DQM DQMU/L	Input	Din Mask / Output Disable: When DQMU/L is high in burst write, Din for the current cycle is masked. When DQMU/L is high in burst read, Dout is disabled at the next but one cycle.
Vdd, Vss	Power Supply	Power Supply for the memory array and peripheral circuitry.
VddQ, VssQ	Power Supply	VddQ and VssQ are supplied to the Output Buffers only.

256M Synchronous DRAM

### BASIC FUNCTIONS

The M2V56S20/30/40TP provides basic functions, bank (row) activate, burst read / write, bank (row) precharge, and auto / self refresh. Each command is defined by control signals of /RAS, /CAS and /WE at CLK rising edge. In addition to 3 signals, /CS, CKE and A10 are used as chip select, refresh option, and precharge option, respectively. To know the detailed definition of commands, please see the command truth table.

#### Activate (ACT) [/RAS =L, /CAS =/WE =H]

ACT command activates a row in an idle bank indicated by BA.

#### Read (READ) [/RAS =H, /CAS =L, /WE =H]

READ command starts burst read from the active bank indicated by BA. First output data appears after /CAS latency. When A10 =H at this command, the bank is deactivated after the burst read (auto-precharge, **READA**)

#### Write (WRITE) [/RAS =H, /CAS =/WE =L]

WRITE command starts burst write to the active bank indicated by BA. Total data length to be written is set by burst length. When A10 =H at this command, the bank is deactivated after the burst write (auto-precharge, **WRITEA**).

#### Precharge (PRE) [/RAS =L, /CAS =H, /WE =L]

PRE command deactivates the active bank indicated by BA. This command also terminates burst read /write operation. When A10 =H at this command, all banks are deactivated (precharge all, **PREA**).

#### Auto-Refresh (REFA) [/RAS =/CAS =L, /WE =CKE =H]

REFA command starts auto-refresh cycle. Refresh address are generated internally. After this command, the banks are precharged automatically.

### ABBREVIATIONS:

H=High Level, L=Low Level, X=Don't Care

BA=Bank Address, RA=Row Address, CA=Column Address, NOP=No Operation

### NOTES:

1. All entries assume that CKE was High during the preceding clock cycle and the current clock cycle.
2. ILLEGAL to bank in specified state; function may be legal in the bank indicated by BA, depending on the state of that bank.
3. Must satisfy bus contention, bus turn around, write recovery requirements.
4. NOP to bank precharging or in idle state. May precharge bank indicated by BA.
5. ILLEGAL if any bank is not idle.

ILLEGAL = Device operation and/or data-integrity are not guaranteed.

256M Synchronous DRAM

## SIMPLIFIED STATE DIAGRAM

M2V56S20/ 30/ 40/ TP -6, -7, -8

256M Synchronous DRAM

POWER ON SEQUENCE

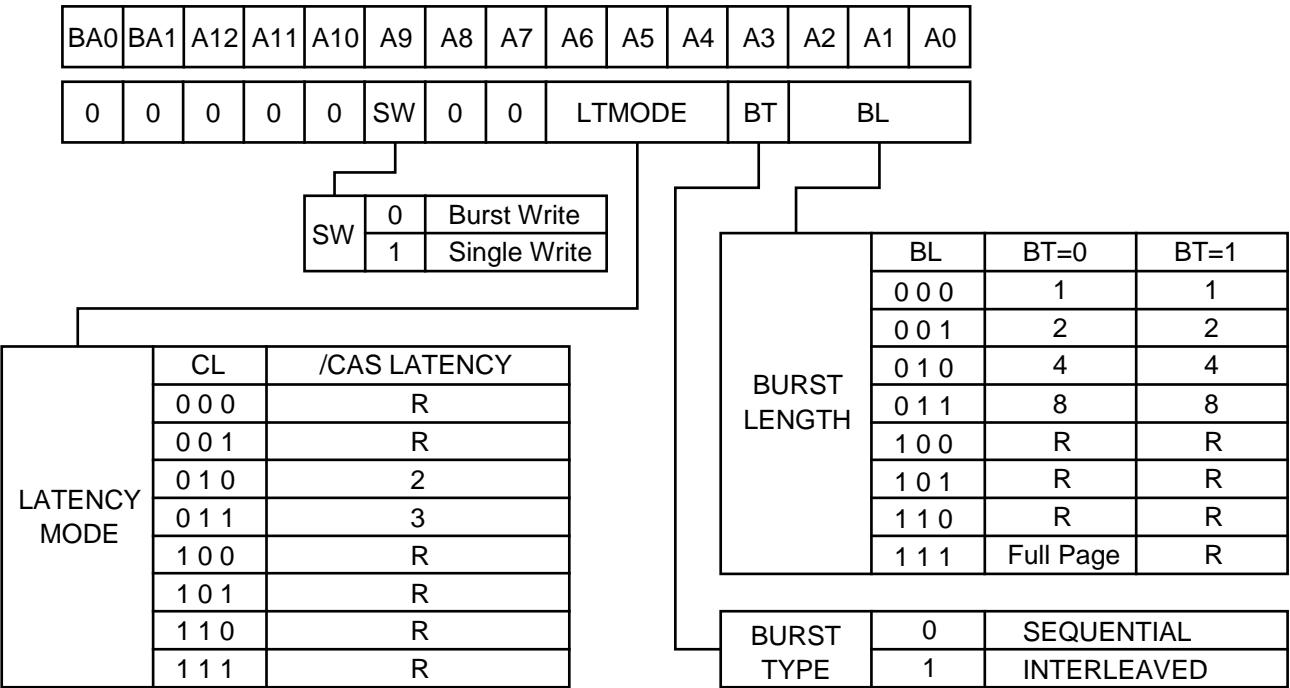

Before starting normal operation, the following power on sequence is necessary to prevent a SDRAM from damaged or malfunctioning.

- 1. Apply power and start clock. Attempt to maintain CKE high, DQM high and NOP condition at the inputs.
- 2. Maintain stable power, stable clock, and NOP input conditions for a minimum of 200μs.
- 3. Issue precharge commands for all banks. (PRE or PREA)
- 4. After all banks become idle state (after tRP), issue 8 or more auto-refresh commands.
- 5. Issue a mode register set command to initialize the mode register.

After these sequence, the SDRAM is idle state and ready for normal operation.

MODE REGISTER

Burst Length, Burst Type and /CAS Latency can be programmed by setting the mode register (MRS). The mode register stores these data until the next MRS command, which may be issued when all banks are in idle state. After tRSC from a MRS command, the SDRAM is ready for new command.

R: Reserved for Future Use

## M2V56S20/ 30/ 40/ TP -6, -7, -8

256M Synchronous DRAM

### OPERATIONAL DESCRIPTION

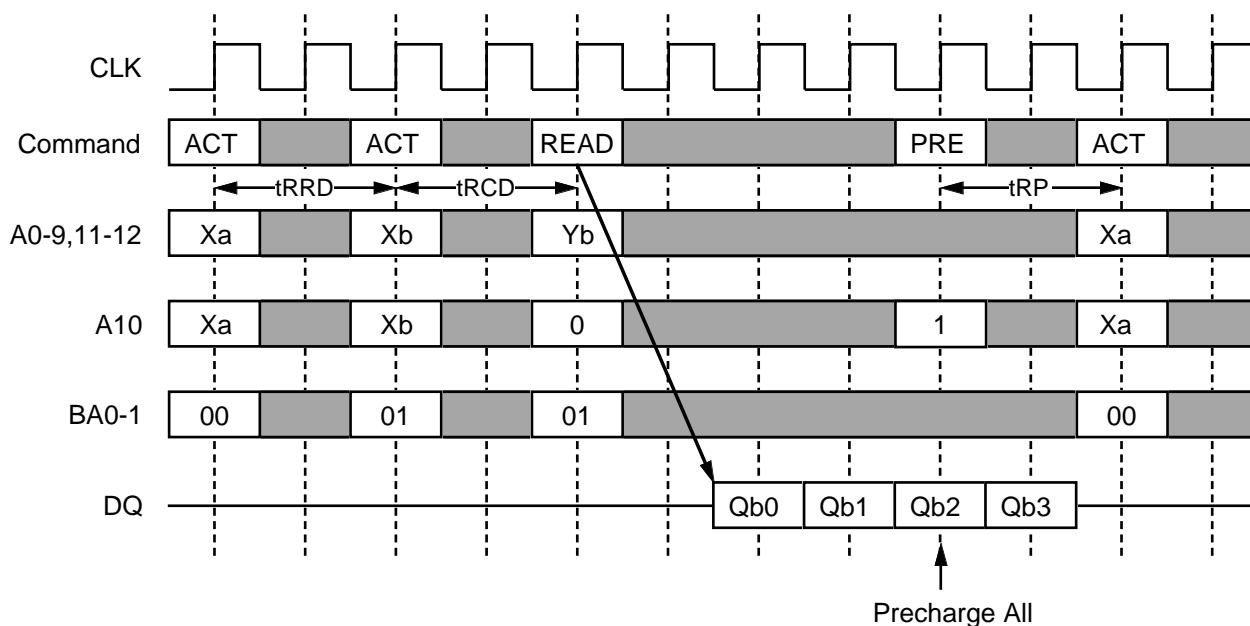

#### BANK ACTIVATE

One of four banks is activated by an ACT command.  
A bank is selected by BA0-1. A row is selected by A0-12.  
Multiple banks can be active state concurrently by issuing multiple ACT commands.  
Minimum activation interval between one bank and another bank is  $t_{RRD}$ .

#### PRECHARGE

An open bank is deactivated by a PRE command.  
A bank to be deactivated is designated by BA0-1.  
When multiple banks are active, a precharge all command (PREA, PRE + A10=H) deactivates all of open banks at the same time. BA0-1 are "Don't Care" in this case.  
Minimum delay time of an ACT command after a PRE command to the same bank is  $t_{RP}$ .

**Bank Activation and Precharge All (BL=4, CL=3)**

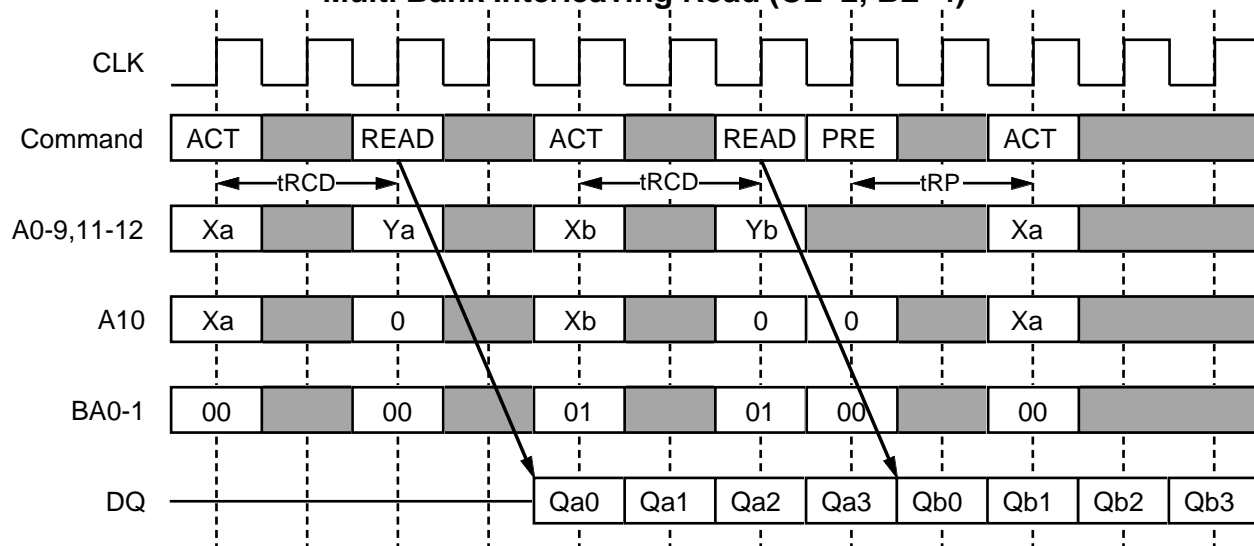

#### READ

A READ command can be issued to any active bank. The start address is specified by A0-9,11(x4), A0-9 (x8), A0-8 (x16). 1st output data is available after the /CAS Latency from the READ. The consecutive data length is defined by the Burst Length. The address sequence of the burst data is defined by the Burst Type. Minimum delay time of a READ command after an ACT command to the same bank is  $t_{RCD}$ .  
When A10 is high at a READ command, auto-precharge (READA) is performed. Any command (READ, WRITE, PRE, ACT, TBST) to the same bank is inhibited till the internal precharge is complete. The internal precharge starts at the BL after READA. The next ACT command can be issued after (BL +  $t_{RP}$ ) from the previous READA. In any case,  $t_{RCD} + BL \geq t_{RASmin}$  must be met.

internal precharge starts

## Auto-Precharge Timing (READ, BL=4)

internal precharge starts

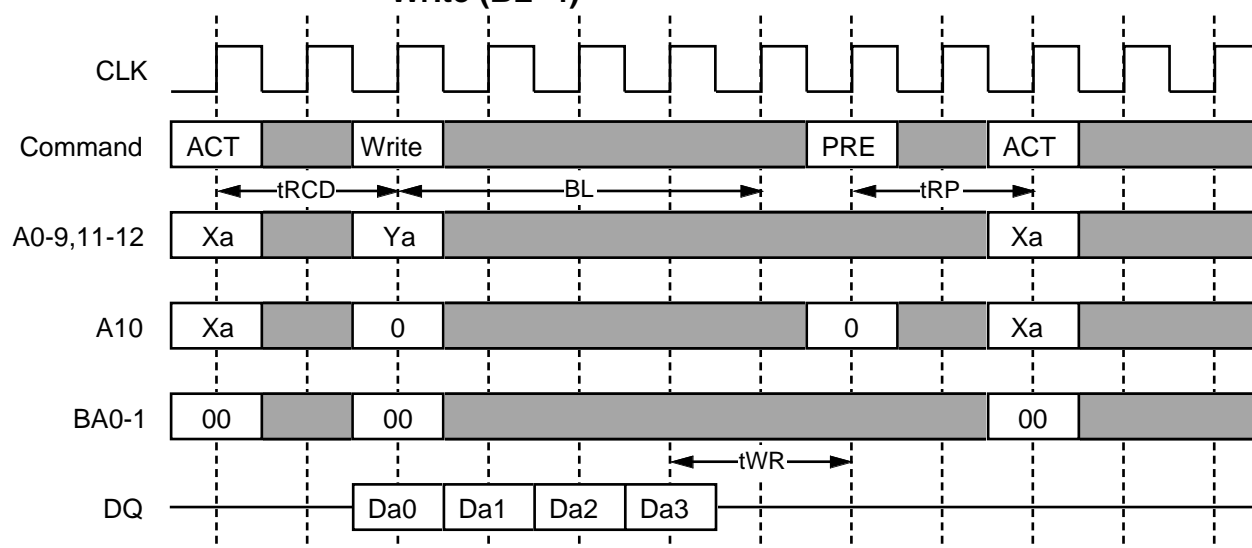

# M2V56S20/ 30/ 40/ TP -6, -7, -8

256M Synchronous DRAM

## WRITE

A WRITE command can be issued to any active bank. The start address is specified by A0-9,11(x4), A0-9 (x8), A0-8 (x16). 1st input data is set at the same cycle as the WRITE. The consecutive data length to be written is defined by the Burst Length. The address sequence of burst data is defined by the Burst Type. Minimum delay time of a WRITE command after an ACT command to the same bank is  $t_{RCD}$ . From the last input data to the PRE command, the write recovery time ( $t_{WR}$ ) is required. When A10 is high at a WRITE command, auto-precharge (WRITEA) is performed. Any command (READ, WRITE, PRE, ACT, TBST) to the same bank is inhibited till the internal precharge is complete. The internal precharge starts at  $t_{WR}$  after the last input data cycle. The next ACT command can be issued after  $(BL + t_{WR} - 1 + t_{RP})$  from the previous WRITEA. In any case,  $t_{RCD} + BL + t_{WR} - 1 \geq t_{RASmin}$  must be met.

### Write (BL=4)

### Write with Auto-Precharge (BL=4)

# M2V56S20/ 30/ 40/ TP -6, -7, -8

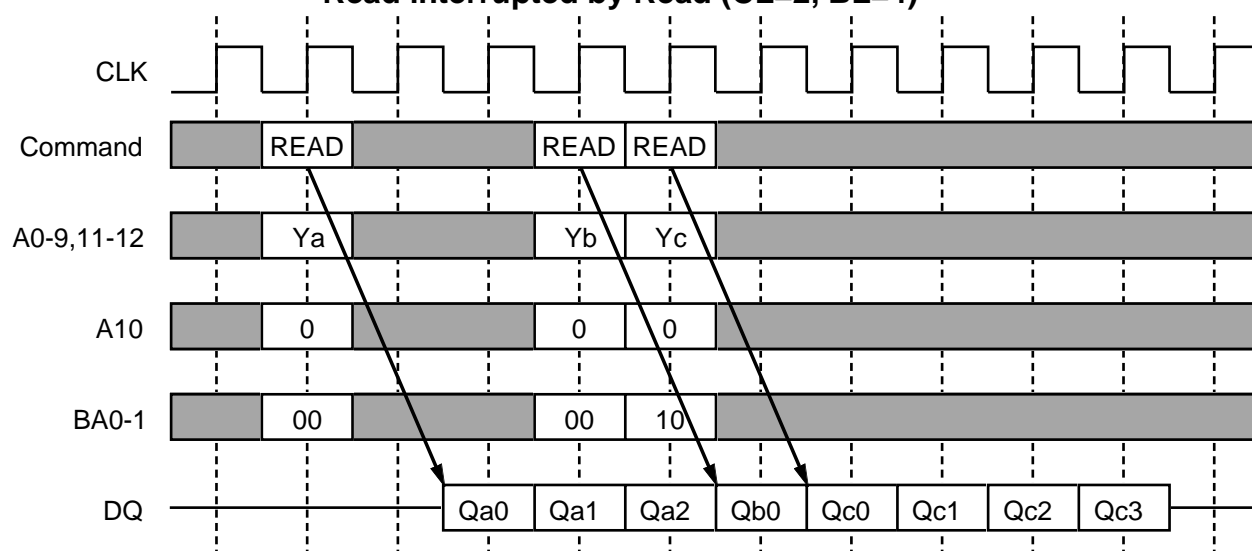

256M Synchronous DRAM

## BURST INTERRUPTION

### [ Read Interrupted by Read ]

Burst read operation can be interrupted by new read of any active bank. Random column access is allowed. READ to READ interval is minimum 1 CLK.

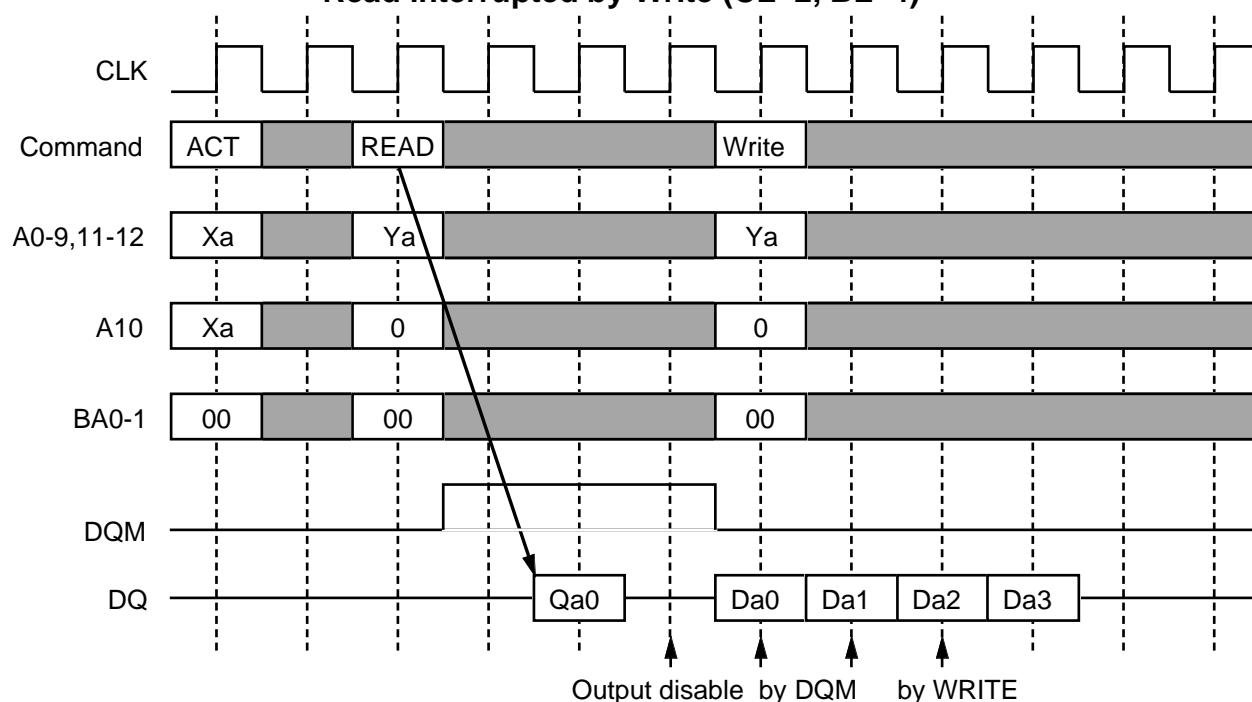

Read interrupted by Read (CL=2, BL=4)

### [ Read Interrupted by Write ]

Burst read operation can be interrupted by write of any active bank. Random column access is allowed. In this case, the DQ should be controlled adequately by using the DQM to prevent the bus contention. The output is disabled automatically 2 cycle after WRITE assertion.

Read interrupted by Write (CL=2, BL=4)

# M2V56S20/ 30/ 40/ TP -6, -7, -8

256M Synchronous DRAM

## [ Read Interrupted by Precharge ]

A burst read operation can be interrupted by a precharge of *the same bank* . READ to PRE interval is minimum 1 CLK.

A PRE command to output disable latency is equivalent to the /CAS Latency.

### Read interrupted by Precharge (BL=4)

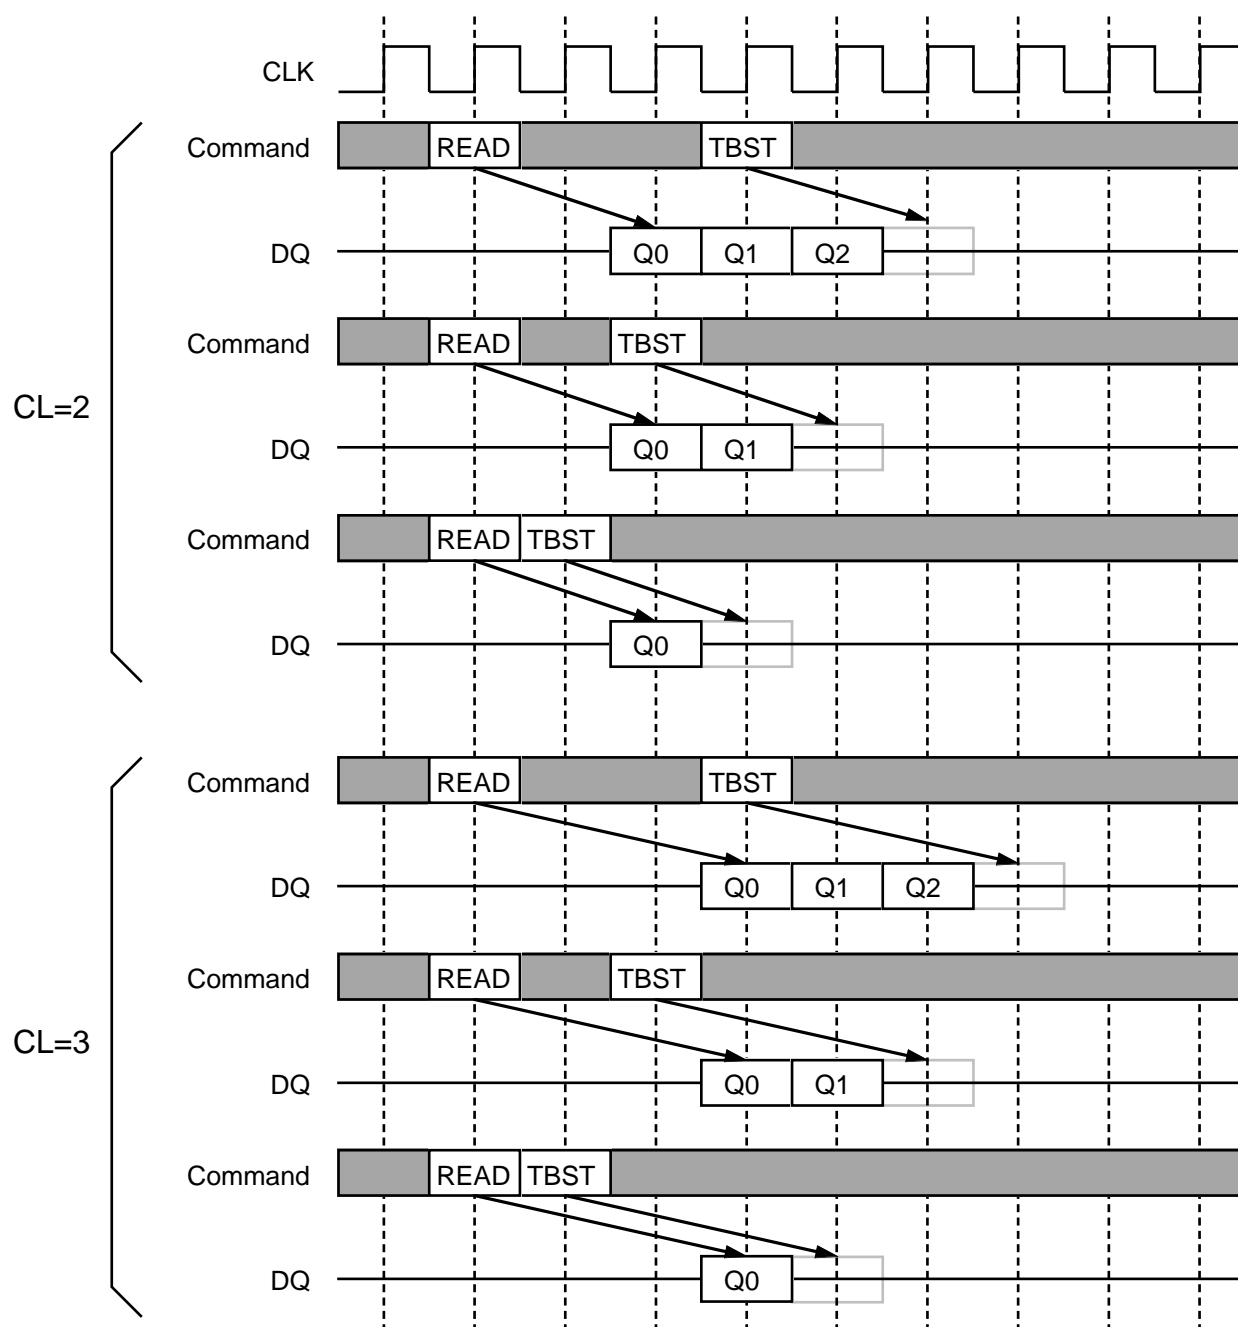

# M2V56S20/ 30/ 40/ TP -6, -7, -8

256M Synchronous DRAM

## [ Read Interrupted by Burst Terminate ]

Similarly to the precharge, a burst terminate command can interrupt the burst read operation and disable the data output. The terminated bank remains active. READ to TBST interval is minimum 1 CLK. A TBST command to output disable latency is equivalent to the /CAS Latency.

### Read interrupted by Terminate (BL=4)

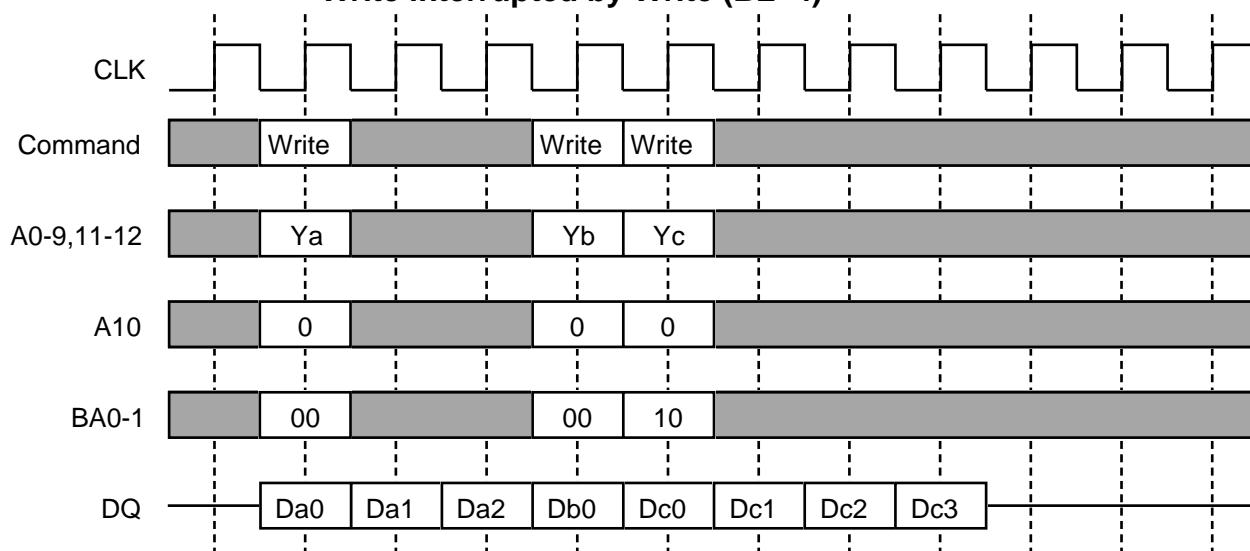

# M2V56S20/ 30/ 40/ TP -6, -7, -8

256M Synchronous DRAM

## [ Write Interrupted by Write ]

Burst write operation can be interrupted by new write of any active bank. Random column access is allowed. WRITE to WRITE interval is minimum 1 CLK.

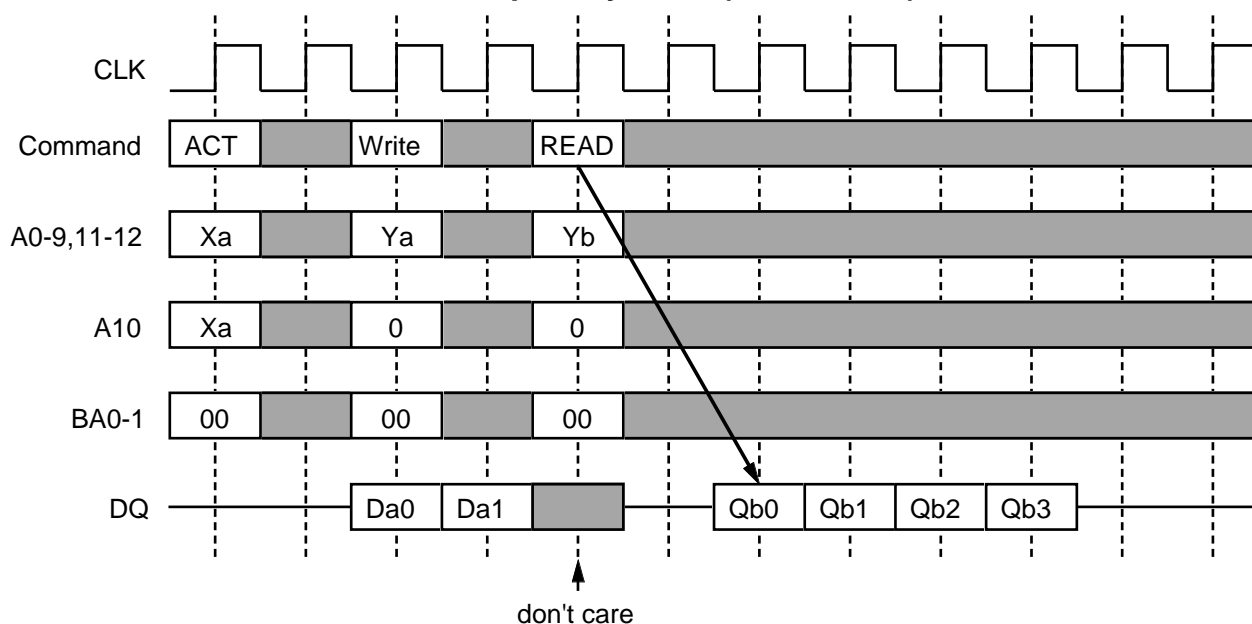

Write interrupted by Write (BL=4)

## [ Write Interrupted by Read ]

Burst write operation can be interrupted by read of any active bank. Random column access is allowed. WRITE to READ interval is minimum 1 CLK. The input data on DQ at the interrupting READ cycle is "Don't Care".

Write interrupted by Read (CL=2, BL=4)

256M Synchronous DRAM

## [ Write Interrupted by Precharge ]

Burst write operation can be interrupted by precharge of *the same bank*. Write recovery time ( $t_{WR}$ ) is required from the last data to PRE command. During write recovery, data inputs must be masked by DQM.

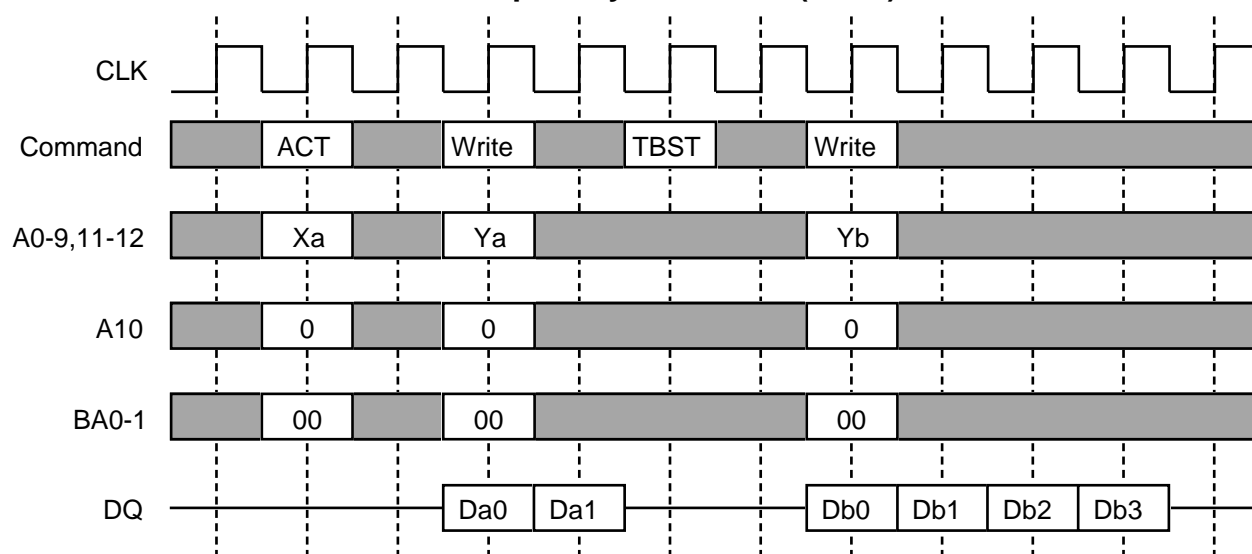

Write interrupted by Precharge (BL=4)

## [ Write Interrupted by Burst Terminate ]

Burst terminate command can terminate burst write operation. In this case, the write recovery time is not required and the bank remains active. WRITE to TBST interval is minimum 1 CLK.

Write interrupted by Terminate (BL=4)

## [ Write with Auto-Precharge Interrupted by Write / Read to another Bank ]

Burst write with auto-precharge can be interrupted by write or read to **another** bank. Next ACT command can be issued after  $(BL+tWR-1+tRP)$  from the WRITEEA. Auto-precharge interruption by a command to the same bank is inhibited.

## WRITEEA interrupted by WRITE to another bank (BL=4)

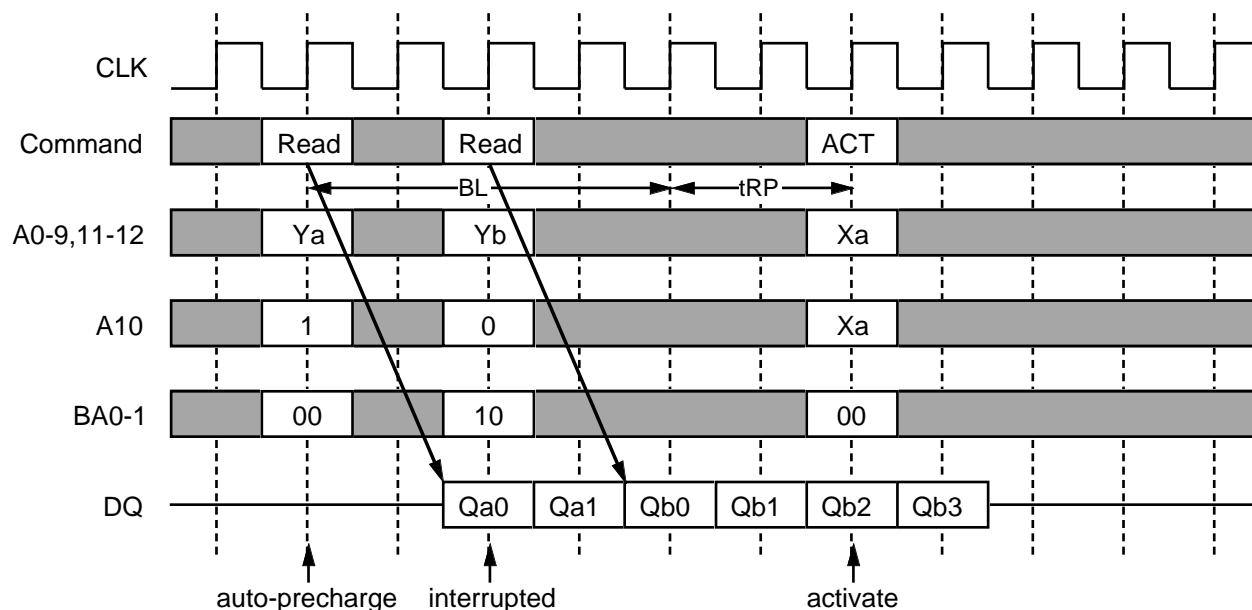

## WRITEEA interrupted by READ to another bank (CL=2, BL=4)

### [ Read with Auto-Precharge Interrupted by Read to another Bank ]

Burst read with auto-precharge can be interrupted by read to **another** bank. Next ACT comand can be issued after (BL+tRP) from the READA. Auto-precharge interruption by a command to the same bank is inhibited.

**READA interrupted by READ to another bank (CL=2, BL=4)**

### Full Page Burst

Full page burst length is available for only the sequential burst type. Full page burst read / write is repeated until a Precharge or a Burst Terminate command is issued. In case of the full page burst, a read / write with auto-precharge command is illegal.

### Single Write

When single write mode is set, burst length for write is always one, independently of Burst Length defined by (A2-0).

**AUTO REFRESH**

Single cycle of auto-refresh is initiated with a REFA (/CS= /RAS= /CAS= L, /WE= /CKE= H) command. The refresh address is generated internally. 8192 REFA cycles within 64ms refresh 256Mbit memory cells. The auto-refresh is performed on 4 banks concurrently. Before performing an auto-refresh, all banks must be in idle state. Auto-refresh to auto-refresh interval is minimum tRFC. Any command must not be issued before tRFC from the REFA command.

# M2V56S20/ 30/ 40/ TP -6, -7, -8

256M Synchronous DRAM

## SELF REFRESH

Self-refresh mode is entered by issuing a REFS command (/CS= /RAS= /CAS= L, /WE= H, CKE= L). Once the self-refresh is initiated, it is maintained as long as CKE is kept low. During the self-refresh mode, CKE is asynchronous and the only enabled input. All other inputs including CLK are disabled and ignored, so that power consumption due to synchronous inputs is saved. To exit the self-refresh, supplying stable CLK inputs, asserting DESEL or NOP command and then asserting CKE=H. After tRFC from the 1st CLK edge following CKE=H, all banks are in idle state and a new command can be issued, but DESEL or NOP commands must be asserted till then.

# M2V56S20/ 30/ 40/ TP -6, -7, -8

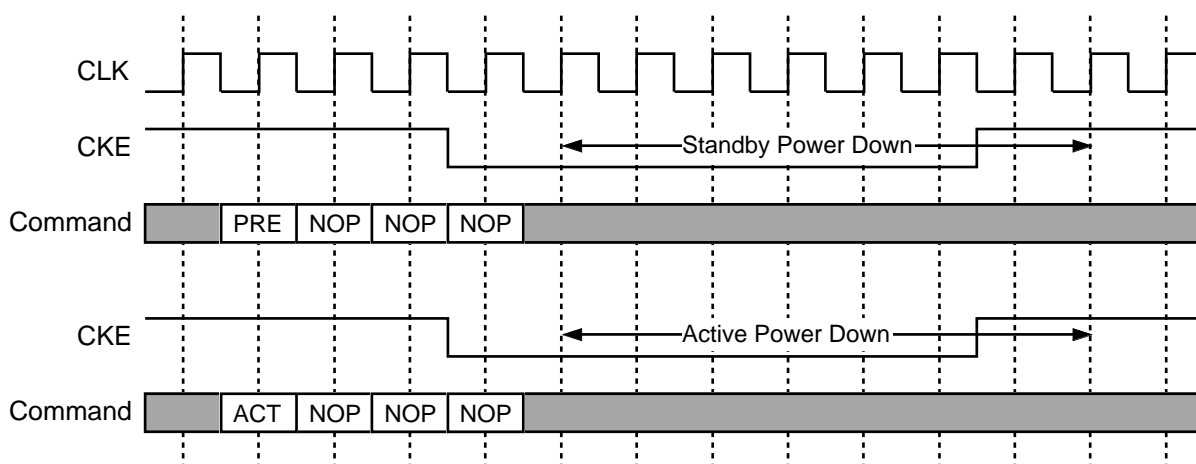

256M Synchronous DRAM

## CLK SUSPEND and POWER DOWN

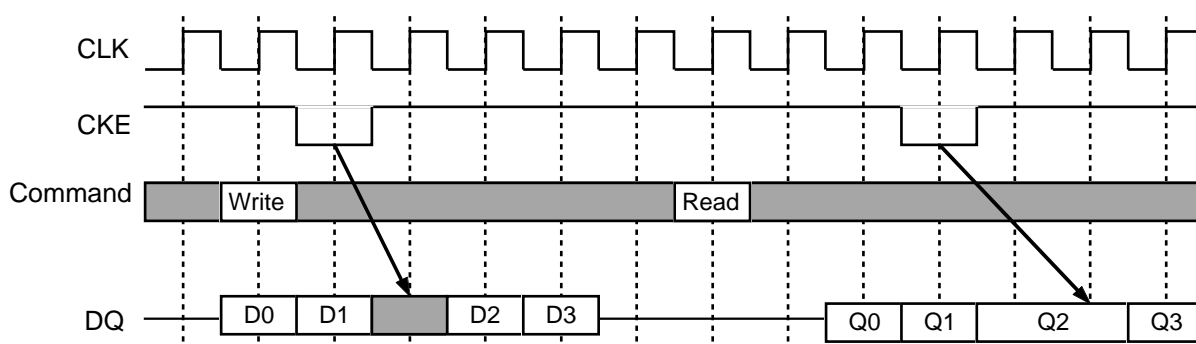

CKE controls the internal CLK at the following cycle. Figure below shows how CKE works. By negating CKE, the next internal CLK is suspended. The purpose of CLK suspend is power down, output suspend or input suspend. CKE is a synchronous input except during the self-refresh mode. CLK suspend can be performed either when the banks are active or idle. A command at the suspended cycle is ignored.

### Power Down by CKE

### DQ Suspend by CKE

**DQM CONTROL**

DQMU/L is a dual functional signal defined as the data mask for writes and the output disable for reads. During writes, DQMU/L masks input data word by word. DQMU/L to Data In latency is 0. During reads, DQMU/L forces output to Hi-Z word by word. DQMU/L to output Hi-Z latency is 2.

## ABSOLUTE MAXIMUM RATINGS

Symbol	Parameter	Conditions	Ratings	Unit
Vdd	Supply Voltage	with respect to Vss	-0.5 ~ 4.6	V
VddQ	Supply Voltage for Output	with respect to VssQ	-0.5 ~ 4.6	V
VI	Input Voltage	with respect to Vss	-0.5 ~ Vdd+0.5	V
VO	Output Voltage	with respect to VssQ	-0.5 ~ VddQ+0.5	V
IO	Output Current		50	mA
Pd	Power Dissipation	Ta = 25 °C	1000	mW
Topr	Operating Temperature		0 ~ 70	°C
Tstg	Storage Temperature		-65 ~ 150	°C

## RECOMMENDED OPERATING CONDITIONS

(Ta=0 ~ 70°C, unless otherwise noted)

Symbol	Parameter	Limits			Unit
		Min.	Typ.	Max.	
Vdd	Supply Voltage	3.0	3.3	3.6	V
Vss	Supply Voltage	0	0	0	V
VddQ	Supply Voltage for Output	3.0	3.3	3.6	V
VssQ	Supply Voltage for Output	0	0	0	V
VIH	High-Level Input Voltage all inputs	2.0		Vdd+0.3	V
VIL	Low-Level Input Voltage all inputs	-0.3		0.8	V

## CAPACITANCE

(Ta=0 ~ 70°C, Vdd = VddQ = 3.3 ± 0.3V, Vss = VssQ = 0V, unless otherwise noted)

Symbol	Parameter	Test Condition	Limits		Unit
			Min.	Max.	
CI(A)	Input Capacitance, address pin	VI=1.4v f=1MHz VI=25mVrms	2.5	3.8	pF
CI(C)	Input Capacitance, control pin		2.5	3.8	pF
CI(K)	Input Capacitance, CLK pin		2.5	3.5	pF
CI/O	Input Capacitance, I/O pin		4.0	6.5	pF

256M Synchronous DRAM

## AVERAGE SUPPLY CURRENT from Vdd

(Ta=0 ~ 70°C, Vdd = VddQ = 3.3 ± 0.3V, Vss = VssQ = 0V, Output Open, unless otherwise noted)

Symbol	Parameter	Test Conditions	Organiz ation	Limits(max)			Unit	Note
				133 MHz		100 MHz		
Icc1	Operating Current (1bank)	tCLK=min, tRC=min, BL=1	x4	90		80	mA	1
			x8	90		80		
			x16	100		90		
Icc2P	Idle Standby Current in Power Down Mode	tCLK=min, CKE≤VILmax		1.5		1	mA	2
Icc2PS		tCLK=∞, CKE≤VILmax		1		1		
Icc2N	Idle Standby Current in Normal Mode	tCLK=min, CKE≥VIHmin, /CS≥ VIHmin		25		20	mA	2,3
Icc2NS		tCLK=∞, CKE≥VIHmin		6		6		
Icc3P	Active Standby Current in Power Down Mode	tCLK=min, CKE≤VILmax		5		4	mA	5
Icc3PS		tCLK=∞, CKE≤VILmax		4		4		
Icc3N	Active Standby Current in Normal Mode	tCLK=min, CKE≥VIHmin, /CS≥ VIHmin		30		25	mA	3,5
Icc3NS		tCLK=∞, CKE≥VIHmin		15		15		
Icc4	Burst Operating Current	tCLK=min, BL=4, gapless data	x4	110		90	mA	5
			x8	110		90		
			x16	120		100		
Icc5	Auto-Refresh Current	tCLK=min, tRFC=min		180		170	mA	
Icc6	Self-Refresh Current	CKE≤0.2v -6/-7/-8		3		3		

### Notes

- addresses are changed 3 times during tRC, only 1 bank is active & all other banks are idle
- all banks are idle
- input signals are changed one time during 3xtCLK
- input signals are stable
- all banks are active

## AC OPERATING CONDITIONS AND CHARACTERISTICS

(Ta=0 ~ 70°C, Vdd = VddQ = 3.3 ± 0.3V, Vss = VssQ = 0V, unless otherwise noted)

Symbol	Parameter	Test Conditions	Limits		Unit
			Min.	Max.	
VOH(DC)	High-Level Output Voltage (DC)	IOH=-2mA	2.4		V
VOL(DC)	Low-Level Output Voltage (DC)	IOL= 2mA		0.4	V
IOZ	Off-state Output Current	Q floating Vo=0 ~ VddQ	-10	10	μA
II	Input Current	VIH=0 ~ VddQ+0.3V, other input pins=0V	-10	10	μA

## AC TIMING REQUIREMENTS

(Ta=0 ~ 70°C, Vdd = VddQ = 3.3 ± 0.3V, Vss = VssQ = 0V, unless otherwise noted)

Input Pulse Levels: 0.8V to 2.0V

Input Timing Measurement Level: 1.4V

Symbol	Parameter		Limits						Unit	Note
			-6		-7		-8			
			Min.	Max.	Min.	Max.	Min.	Max.		
tCLK	CLK cycle time	CL=2	10		10		13		ns	
		CL=3	7.5		10		10		ns	
tCH	CLK High pulse width		2.5		3		3		ns	
tCL	CLK Low pulse width		2.5		3		3		ns	
tT	Transition time of CLK		1	10	1	10	1	10	ns	
tIS	Input Setup time (all inputs)		1.5		2		2		ns	
tIH	Input Hold time (all inputs)		0.8		1		1		ns	
tRC	Row Cycle time		67.5		70		70		ns	
tRFC	Refresh Cycle time		75		80		80		ns	
tRCD	Row to Column Delay		20		20		20		ns	
tRAS	Row Active time		45	120000	50	120000	50	120000	ns	
tRP	Row Precharge time		20		20		20		ns	
tWR	Write Recovery time		15		20		20		ns	
tRRD	ACT to ACT Delay time		15		20		20		ns	
tRSC	Mode Register Set Cycle time		15		20		20		ns	
tREF	Average Refresh Interval			7.8		7.8		7.8	μs	

AC timing is referenced to the input signal crossing through 1.4V.

### Revision History

Rev.	Date	Description
1.0	July / '99	1st edition
1.1	Feb. / '00	<ul style="list-style-type: none"><li>- Remove "Power-Down" from Function Truth Table for CKE Note 2</li><li>- Modify Average Supply Current from Vdd Icc2N, Icc3N Test Condition (<math>/CS \geq V_{IHmin}</math>) Icc3PS Limits (from 3mA to 4mA) Icc5 Limits (from 160/150mA to 180/170mA) Icc6 Test Condition (<math>CKE \leq 0.2V</math>) Icc6 Limits (from 2mA to 3mA)</li><li>- Change Switching Characteristics tAC of -8 for CL=2 from 6ns to 7ns</li><li>- Add Note to Switching Characteristics</li><li>- Change Output Load Condition to 50pF only</li><li>- Remove tCCD from AC Timing Requirements</li></ul>

**M2V56S20/ 30/ 40/ TP -6, -7, -8****256M Synchronous DRAM****Keep safety first in your circuit designs!**

Mitsubishi Electric Corporation puts the maximum effort into making semiconductor products better and more reliable, but there is always the possibility that trouble may occur with them. Trouble with semiconductors may lead to personal injury, fire or property damage. Remember to give due consideration to safety when making your circuit designs, with appropriate measures such as (i) placement of substitutive, auxiliary circuits, (ii) use of non-flammable material or (iii) prevention against any malfunction or mishap.

**Notes regarding these materials**

1. These materials are intended as a reference to assist our customers in the selection of the Mitsubishi semiconductor product best suited to the customer's application; they do not convey any license under any intellectual property rights, or any other rights, belonging to Mitsubishi Electric Corporation or a third party.
2. Mitsubishi Electric Corporation assumes no responsibility for any damage, or infringement of any third-party's rights, originating in the use of any product data, diagrams, charts, programs, algorithms, or circuit application examples contained in these materials.
3. All information contained in these materials, including product data, diagrams, charts, programs and algorithms represents information on products at the time of publication of these materials, and are subject to change by Mitsubishi Electric Corporation without notice due to product improvements or other reasons. It is therefore recommended that customers contact Mitsubishi Electric Corporation or an authorized Mitsubishi Semiconductor product distributor for the latest product information before purchasing a product listed herein. The information described here may contain technical inaccuracies or typographical errors. Mitsubishi Electric Corporation assumes no responsibility for any damage, liability, or other loss rising from these inaccuracies or errors. Please also pay attention to information published by Mitsubishi Electric Corporation by various means, including the Mitsubishi Semiconductor home page (<http://www.mitsubishichips.com>).
4. When using any or all of the information contained in these materials, including product data, diagrams, charts, programs, and algorithms, please be sure to evaluate all information as a total system before making a final decision on the applicability of the information and products. Mitsubishi Electric Corporation assumes no responsibility for any damage, liability or other loss resulting from the information contained herein.
5. Mitsubishi Electric Corporation semiconductors are not designed or manufactured for use in a device or system that is used under circumstances in which human life is potentially at stake. Please contact Mitsubishi Electric Corporation or an authorized Mitsubishi Semiconductor product distributor when considering the use of a product contained herein for any specific purposes, such as apparatus or systems for transportation, vehicular, medical, aerospace, nuclear, or undersea repeater use.
6. The prior written approval of Mitsubishi Electric Corporation is necessary to reprint or reproduce in whole or in part these materials.
7. If these products or technologies are subject to the Japanese export control restrictions, they must be exported under a license from the Japanese government and cannot be imported into a country other than the approved destination. Any diversion or reexport contrary to the export control laws and regulations of Japan and/or the country of destination is prohibited.
8. Please contact Mitsubishi Electric Corporation or an authorized Mitsubishi Semiconductor product distributor for further details on these materials or the products contained therein.
