

3-Bit Registered Bus Transceiver

The MC10E/MC100E336 contains three bus transceivers with both transmit and receive registers. The bus outputs (BUS0–BUS2) are specified for driving a 25Ω bus; the receive outputs (Q0 – Q2) are specified for 50Ω. The bus outputs feature a normal HIGH level (V_{OH}) and a cutoff LOW level — when LOW, the outputs go to –2.0V and the output emitter-follower is “off”, presenting a high impedance to the bus. The bus outputs also feature edge slow-down capacitors.

- 25Ω Cutoff Bus Outputs
- 50Ω Receiver Outputs
- Transmit and Receive Registers
- 1500ps Max. Clock to Bus
- 1000ps Max. Clock to Q
- Bus Outputs Feature Internal Edge Slow-Down Capacitors
- Additional Package Ground Pins
- Extended 100E V_{EE} Range of – 4.2V to – 5.46V
- 75kΩ Input Pulldown Resistors

The Transmit Enable pins (TEN) control whether current data is held in the transmit register, or new data is loaded from the A/B inputs. A LOW on both of the Bus Enable inputs (BUSEN), when clocked through the register, disables the bus outputs to $-2.0V$.

The receiver section clocks bus data into the receive registers, after gating with the Receive Enable (RXEN) input.

All registers are clocked by a positive transition of CLK1 or CLK2 (or both).

Additional leadframe grounding is provided through the Ground pins (GND) which should be connected to 0V. The GND pins are not electrically connected to the chip.
