

MOS INTEGRATED CIRCUIT

μ PD42S16800L, 4216800L, 42S17800L, 4217800L

3.3 V OPERATION 16 M-BIT DYNAMIC RAM

2 M-WORD BY 8-BIT, FAST PAGE MODE

DESCRIPTION

The μ PD42S16800L, 4216800L, 42S17800L, 4217800L are 2 097 152 words by 8 bits dynamic CMOS RAMs.

These differ in refresh cycle and the μ PD42S16800L, 42S17800L can execute $\overline{\text{CAS}}$ before $\overline{\text{RAS}}$ self refresh (see the table below).

These are packed in 28-pin plastic TSOP(II) (400 mil) and 28-pin plastic SOJ (400 mil).

FEATURES

- 2 097 152 words by 8 bits organization
- Single +3.3 V \pm 0.3 V power supply
- Fast page mode
- The μ PD42S16800L, μ PD42S17800L can execute $\overline{\text{CAS}}$ before $\overline{\text{RAS}}$ self refresh.

Part number	Refresh cycle	Refresh	Power consumption at standby (MAX.)
μ PD42S16800L	4 096 cycles/128 ms	$\overline{\text{CAS}}$ before $\overline{\text{RAS}}$ self refresh, $\overline{\text{CAS}}$ before $\overline{\text{RAS}}$ refresh, $\overline{\text{RAS}}$ only refresh, Hidden refresh	0.54 mW (CMOS level input)
μ PD42S17800L	2 048 cycles/128 ms		
μ PD4216800L	4 096 cycles/64 ms	$\overline{\text{CAS}}$ before $\overline{\text{RAS}}$ refresh, $\overline{\text{RAS}}$ only refresh, Hidden refresh	1.8 mW (CMOS level input)
μ PD4217800L	2 048 cycles/32 ms		

- Fast access and cycle time

Part number	Power consumption Active (MAX.)	Access time (MAX.)	R/W cycle time (MIN.)	Fast page mode cycle time (MIN.)
μ PD42S16800L-A60, 4216800L-A60	288 mW	60 ns	110 ns	40 ns
μ PD42S17800L-A60, 4217800L-A60	360 mW			
μ PD42S16800L-A70, 4216800L-A70	252 mW	70 ns	130 ns	45 ns
μ PD42S17800L-A70, 4217800L-A70	324 mW			
μ PD42S16800L-A80, 4216800L-A80	216 mW	80 ns	150 ns	50 ns
μ PD42S17800L-A80, 4217800L-A80	288 mW

QUALITY GRADE

STANDARD

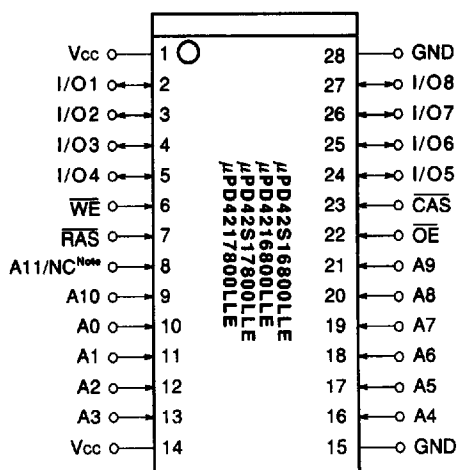

Please refer to "Quality grade on NEC Semiconductor Devices" (Document number IEI-1209) published by NEC Corporation to know the specification of quality grade on the devices and its recommended applications.

PIN CONFIGURATIONS (Marking Side)

28-pin Plastic TSOP (II)

28-pin Plastic SOJ

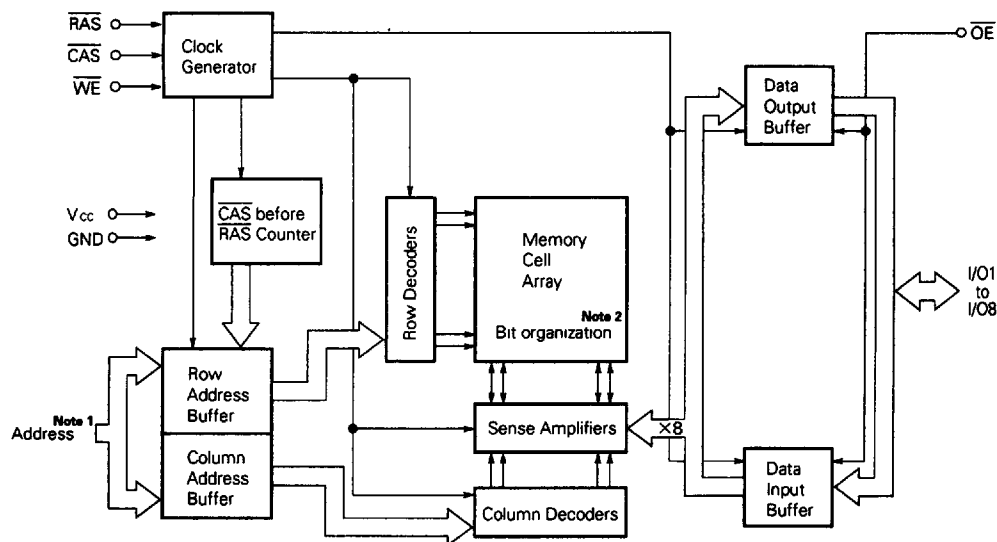

- A0 to A11 : Address inputs
- I/O1 to I/O8 : Data Inputs/Outputs
- $\overline{\text{RAS}}$: Row address strobe
- $\overline{\text{CAS}}$: Column address strobe
- $\overline{\text{WE}}$: Write enable
- $\overline{\text{OE}}$: Output enable
- Vcc : Supply voltage
- GND : Ground
- NC : No connection

Note A11 ...μPD42S16800L, 4216800L

NC ...μPD42S17800L, 4217800L (No connection)

BLOCK DIAGRAM

Notes 1.

Part number	Row address	Column address
μ PD42S16800L, 4216800L	A0 to A11	A0 to A8
μ PD42S17800L, 4217800L	A0 to A10	A0 to A9

2. μ PD42S16800L, 4216800L...4 096 \times 512 \times 8

μ PD42S17800L, 4217800L...2 048 \times 1 024 \times 8

INPUT/OUTPUT PIN FUNCTIONS

The μPD42S16800L, 4216800L, 42S17800L, 4217800L have input pins $\overline{\text{RAS}}$, $\overline{\text{CAS}}$, $\overline{\text{WE}}$, $\overline{\text{OE}}$, A0 to A11/A10^{Note1} and input/output pins I/O1 to I/O8.

Pin name	Input/ Output	Function
$\overline{\text{RAS}}$ (Row address strobe)	Input	$\overline{\text{RAS}}$ activates the sense amplifier by latching a row address and selecting a corresponding word line. It refreshes memory cell array of one line selected by the row address. It also selects the following function. • $\overline{\text{CAS}}$ before $\overline{\text{RAS}}$ refresh.
$\overline{\text{CAS}}$ (Column address strobe)		$\overline{\text{CAS}}$ activates data input/output circuit by latching column address and selecting a digit line connected with the sense amplifier.
A0 to A11/A10 ^{Note1} (Address input)		Address bus. Input total 21-bit of address signal, upper 12/11 ^{Note2} -bit and lower 9/10 ^{Note3} -bit in sequence (address multiplex method). Therefore, one word is selected from 2 097 152-word by 8-bit memory cell array. In actual operation, latch row address by specifying row address and activating $\overline{\text{RAS}}$. Then, switch the address bus to column address and activate $\overline{\text{CAS}}$. Each address is taken into the device when $\overline{\text{RAS}}$ and $\overline{\text{CAS}}$ are activated. Therefore, the address input setup time (t_{ASR} , t_{ASC}) and hold time (t_{RAH} , t_{CAH}) are specified for the activation of $\overline{\text{RAS}}$ and $\overline{\text{CAS}}$.
$\overline{\text{WE}}$ (Write enable)		Write control signal. Write operation is executed by activating $\overline{\text{RAS}}$, $\overline{\text{CAS}}$ and $\overline{\text{WE}}$.
$\overline{\text{OE}}$ (Output enable)	Input/ Output	Read control signal. Read operation can be executed by activating $\overline{\text{RAS}}$, $\overline{\text{CAS}}$ and $\overline{\text{OE}}$. If $\overline{\text{WE}}$ is activated during read operation, $\overline{\text{OE}}$ is to be ineffective in the device. Therefore, read operation cannot be executed.
I/O1 to I/O8 (Data input/output)		8-bit data bus. I/O1 to I/O8 are used to input/output data.

ELECTRICAL SPECIFICATIONS Notes 1, 2

ABSOLUTE MAXIMUM RATINGS

Parameter	Symbol	Condition	Rating	Unit
Voltage on any pin relative to GND	V_T		-0.5 to +4.6	V
Supply voltage	V_{CC}		-0.5 to +4.6	V
Output current	I_O		20	mA
Power dissipation	P_D		1	W
Operating temperature	T_{opt}		0 to +70	°C
Storage temperature	T_{stg}		-55 to +125	°C

Remark Exposing the device to stress above those listed in Absolute Maximum Ratings could cause permanent damage. The device is not meant to be operated under conditions outside the limits described in the operational section of this specification. Exposure to Absolute Maximum Rating conditions for extended periods may affect device reliability.

RECOMMENDED OPERATING CONDITIONS

Parameter	Symbol	Condition	MIN.	TYP.	MAX.	Unit
Supply voltage	V_{CC}		3.0	3.3	3.6	V
High level input voltage	V_{IH}		2.0		$V_{CC} + 0.3$	V
Low level input voltage	V_{IL}		-0.3		+0.8	V
Ambient temperature	T_a		0		70	°C

CAPACITANCE ($T_a = +25\text{ °C}$, $f = 1\text{ MHz}$)

Parameter	Symbol	Test condition	MIN.	TYP.	MAX.	Unit
Input capacitance	C_{I1}	A0 to A11			5	pF
	C_{I2}	RAS, CAS, WE, OE			7	pF
Data Input/Output capacitance	$C_{I/O}$	I/O1 to I/O8			7	pF

DC CHARACTERISTICS (Recommended Operating Conditions unless otherwise noted)

Notes

1. All voltages are referenced to GND.
2. After power-up, wait more than 100 μ s and then, execute 8 $\overline{\text{CAS}}$ before $\overline{\text{RAS}}$ refresh cycles or 8 $\overline{\text{RAS}}$ only refresh cycles to initialize the internal circuit.
3. t_{CC1} , t_{CC3} , t_{CC4} , t_{CC5} , and t_{CC6} depend on t_{AC} and t_{PC} . Specified values are obtained with outputs open.
4. Address can be changed once or less while $\overline{\text{RAS}} = V_{IL}$ and $\overline{\text{CAS}} = V_{IH}$.
5. AC measurements assume $t_T = 5$ ns.
6. AC Characteristics test condition

(1) Input timing specification

(2) Output timing specification

7. The minimum specifications are used only to indicate cycle time at which proper operation over the full temperature range ($T_a = 0$ to 70°C) is assured.
8. In random read cycle, the access time is changed by the conditions of t_{RAD} and t_{RCD} as follows.

CONDITION	ACCESS TIME
$t_{RAD} \leq t_{RAD} (MAX.)$ and $t_{RCD} \leq t_{RCD} (MAX.)$	$t_{RAC} (MAX.)$
$t_{RAD} (MAX.) < t_{RAD}$ and $t_{RCD} \leq t_{RCD} (MAX.)$	$t_{AA} (MAX.)$
$t_{RCD} (MAX.) < t_{RCD}$	$t_{CAC} (MAX.)$

$t_{RAD} (MAX.)$ and $t_{RCD} (MAX.)$ indicate the points which the access time changes and are not the limits of operation.

9. Loading conditions are 1 TTL and 100 pF.
10. $t_{OFF} (MAX.)$ and $t_{OEZ} (MAX.)$ define the time at which the output achieves the open circuit condition and are not referenced to V_{OH} or V_{OL} .
11. $t_{CRP} (MIN.)$ requirement should be applicable for $\overline{\text{RAS}} / \overline{\text{CAS}}$ cycles preceded by any cycles.
12. Either $t_{RCH} (MIN.)$ or $t_{RRH} (MIN.)$ must be satisfied for a read cycle.
13. $t_{WP} (MIN.)$ is applicable for late write cycle or read modify write cycle. In early write cycles, $t_{WCH} (MIN.)$ should be satisfied.
14. This specification is referenced to $\overline{\text{CAS}}$ falling edge in early write cycles and to $\overline{\text{WE}}$ falling edge in late write or read modify write cycles.
15. If $t_{WCS} \geq t_{WCS} (MIN.)$, the cycle is an early write cycle and the data out will remain Hi-Z through the entire cycle. If $t_{RWD} \geq t_{RWD} (MIN.)$, $t_{CWD} \geq t_{CWD} (MIN.)$, $t_{AWD} \geq t_{AWD} (MIN.)$, $t_{CPWD} \geq t_{CPWD} (MIN.)$, the cycle is a read modify write cycle and the data out will contain data read from the selected cell. If neither of the above conditions is met, the condition of the data out is indeterminate.
16. This specification is applicable only for μ PD42S16800L and μ PD42S17800L.

READ CYCLE

EARLY WRITE CYCLE

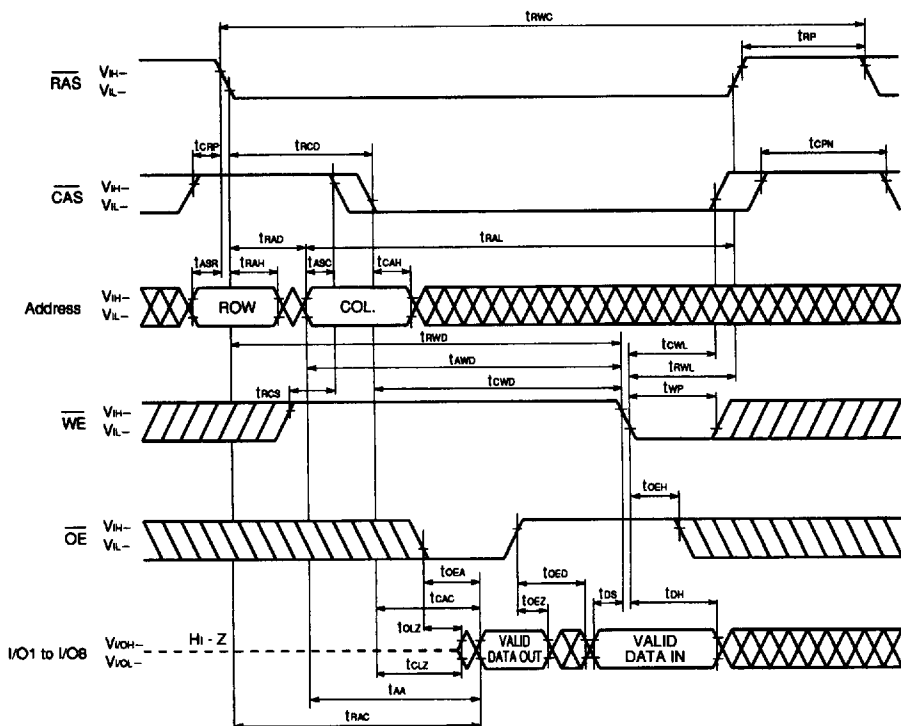

Remark \overline{OE} = Don't Care

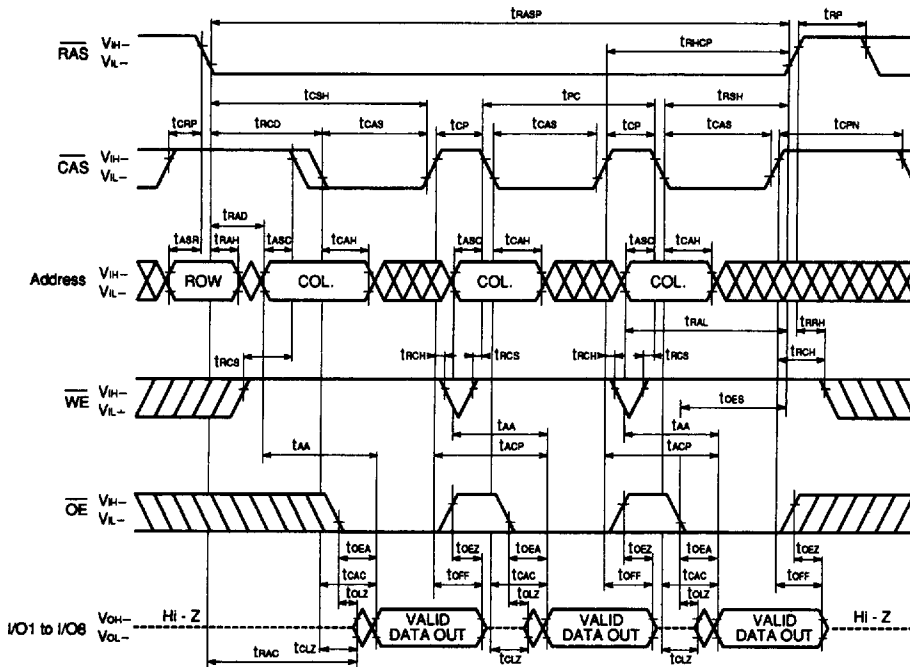

LATE WRITE CYCLE

READ MODIFY WRITE CYCLE

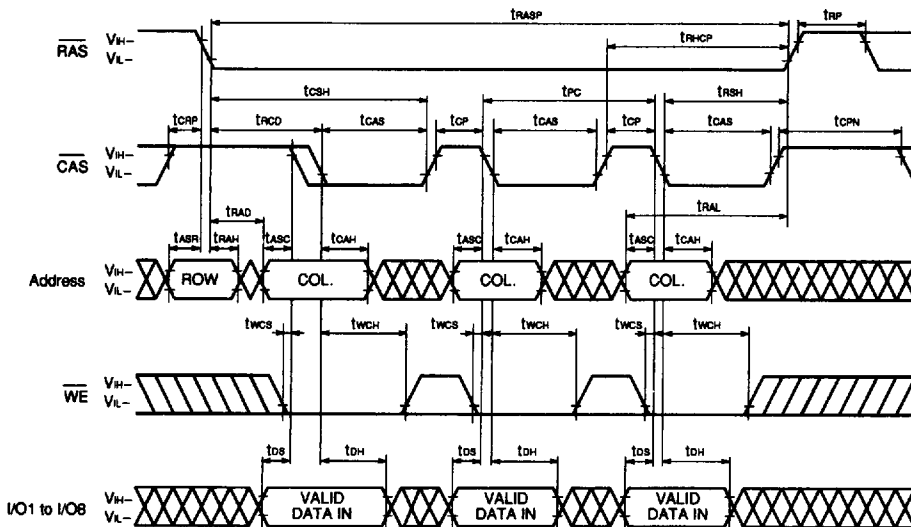

FAST PAGE MODE READ CYCLE

Remark In the fast page mode, read, write and read modify write cycles are available for each of the consecutive $\overline{\text{CAS}}$ cycles within the same $\overline{\text{RAS}}$ cycle.

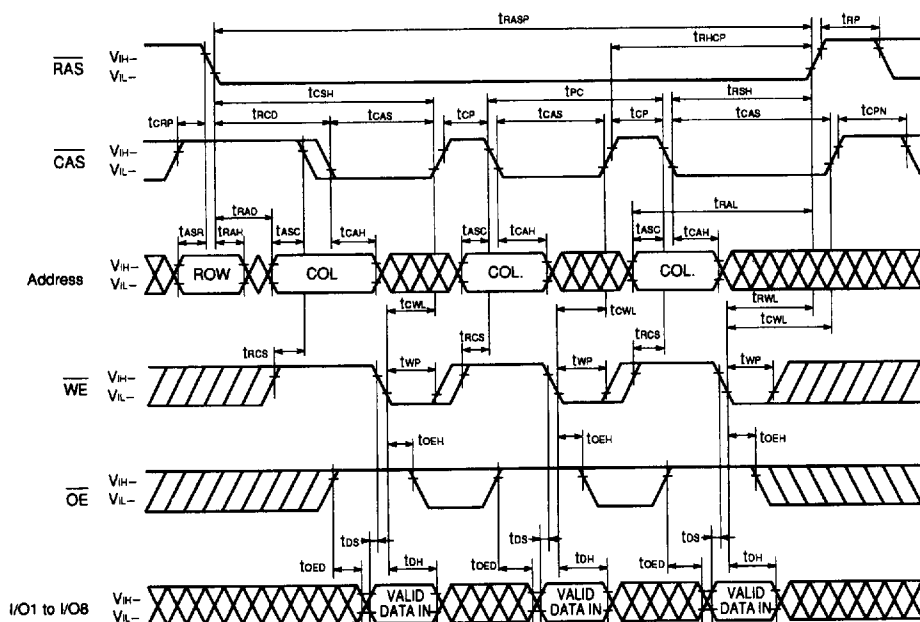

FAST PAGE MODE EARLY WRITE CYCLE

Remark $\overline{OE} = \text{Don't Care}$

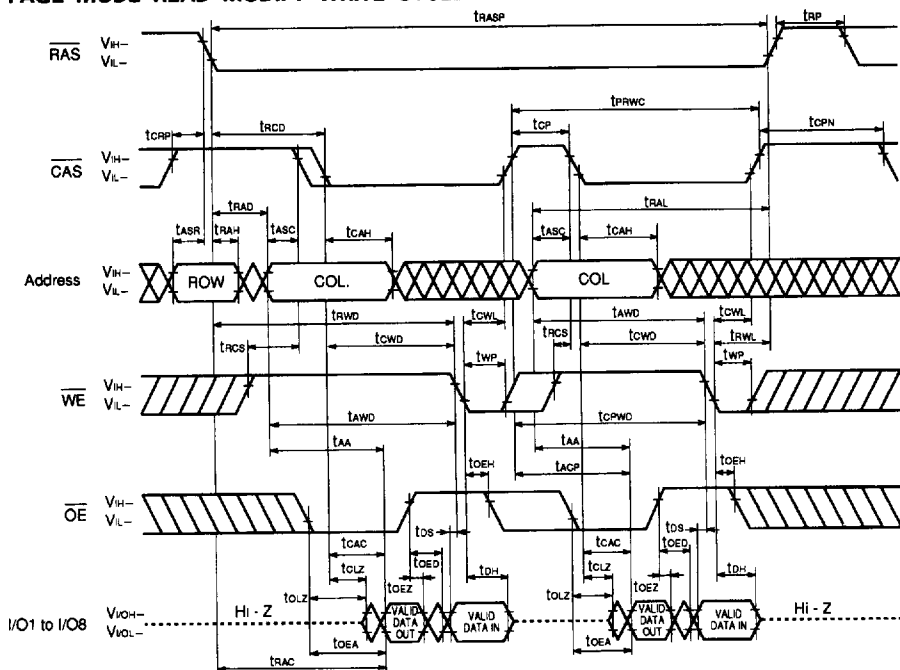

In the fast page mode, read, write and read modify write cycles are available for each of the consecutive $\overline{\text{CAS}}$ cycles within the same $\overline{\text{RAS}}$ cycle.

FAST PAGE MODE LATE WRITE CYCLE

Remark In the fast page mode, read, write and read modify write cycles are available for each of the consecutive CAS cycles within the same RAS cycle

FAST PAGE MODE READ MODIFY WRITE CYCLE

Remark In the fast page mode, read, write and read modify write cycles are available for each of the consecutive $\overline{\text{CAS}}$ cycles within the same $\overline{\text{RAS}}$ cycle

CAS before RAS SELF REFRESH CYCLE (Only for μ PD42S16800L, 42S17800L)

Remark Address, \overline{OE} = Don't care I/O1 to I/O8 = Hi - Z

How to use CAS before RAS self refresh mode

CAS before RAS self refresh mode can't be used by itself. It must be used with performing one of 3 refreshes below.

• **When using distributed CAS before RAS refresh**

Refresh 4 096 times (μ PD42S16800L) or 2 048 times (μ PD42S17800L) during 128 ms before set into the CAS before RAS self refresh mode and after reset.

• **When using burst CAS before RAS refresh**

Refresh 4 096 times during 64 ms (μ PD42S16800L) or 2 048 times during 32 ms (μ PD42S17800L) before set into the CAS before RAS self refresh mode and after reset.

• **When using RAS only refresh**

Refresh against all refresh addresses during 64 ms (μ PD42S16800L) or during 32 ms (μ PD42S17800L) before set into the CAS before RAS self refresh mode and after reset.

CAS BEFORE RAS REFRESH CYCLE

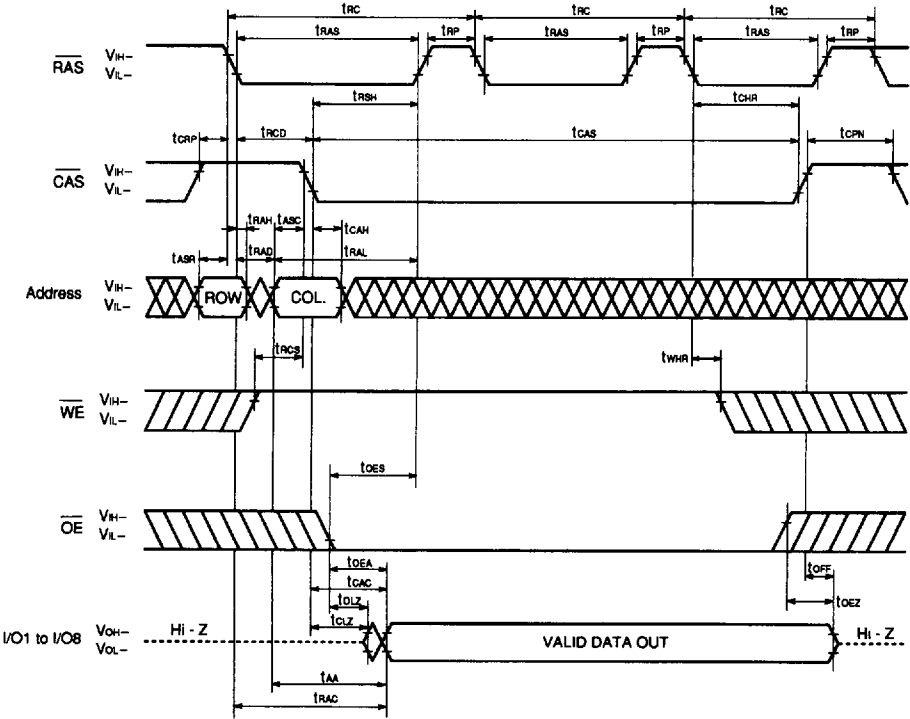

Remark Address, \overline{OE} = Don't care I/O1 to I/O8 = Hi - Z

RAS ONLY REFRESH CYCLE

Remark \overline{WE} , \overline{OE} = Don't care I/O1 to I/O8 = Hi - Z

HIDDEN REFRESH CYCLE

TEST MODE SET CYCLE ($\overline{\text{WE}}$ AND $\overline{\text{CAS}}$ BEFORE $\overline{\text{RAS}}$ REFRESH CYCLE)

Remark Address, $\overline{\text{OE}}$ = Don't care I/O1 to I/O8 = Hi - Z

TEST MODE

TEST MODE is fast test function. On using this mode, test time is reduced to 1/2. In this TEST MODE, internal organization is 1 M words by 16 bits apparently. Don't care about the input levels of the $\overline{\text{CAS}}$ input A0.

1. How to enter TEST MODE

Through TEST MODE SET CYCLE ($\overline{\text{WE}}$ and $\overline{\text{CAS}}$ before $\overline{\text{RAS}}$ refresh cycle), the device enters TEST MODE.

2. Write / Read in TEST MODE

Write data of "1" or "0" through I/O1 to I/O8 by controlling address except for above-mentioned address. Each input data through each I/O write 2 bits at once. And read through I/O1 to I/O8 to check written data. In case of writing each 2 bits rightly, each I/O data is "1". But wrong, the data is "0".

3. Refresh in TEST MODE

Use normal read cycle or $\overline{\text{WE}}$ and $\overline{\text{CAS}}$ before $\overline{\text{RAS}}$ refresh cycle.

4. How to exit from TEST MODE

Through $\overline{\text{RAS}}$ only refresh cycle or $\overline{\text{CAS}}$ before $\overline{\text{RAS}}$ refresh cycle, the device exits from TEST MODE.
