

MONOLITHIC H BRIDGE DRIVER CIRCUIT**DESCRIPTION**

The μ PD16804 is a monolithic H bridge driver IC which uses low-ON resistance power MOS FETs in its driver stage. This driver has a forward, reverse, and brake functions and is ideal for the driver circuit of motors for camera that advance or rewind the film, and auto focusing or zooming.

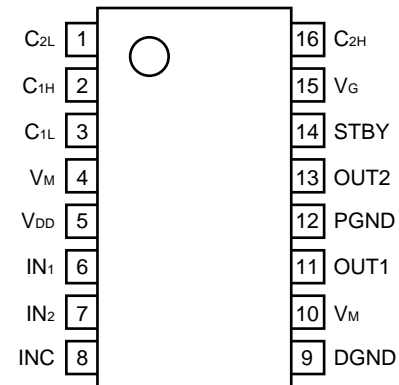

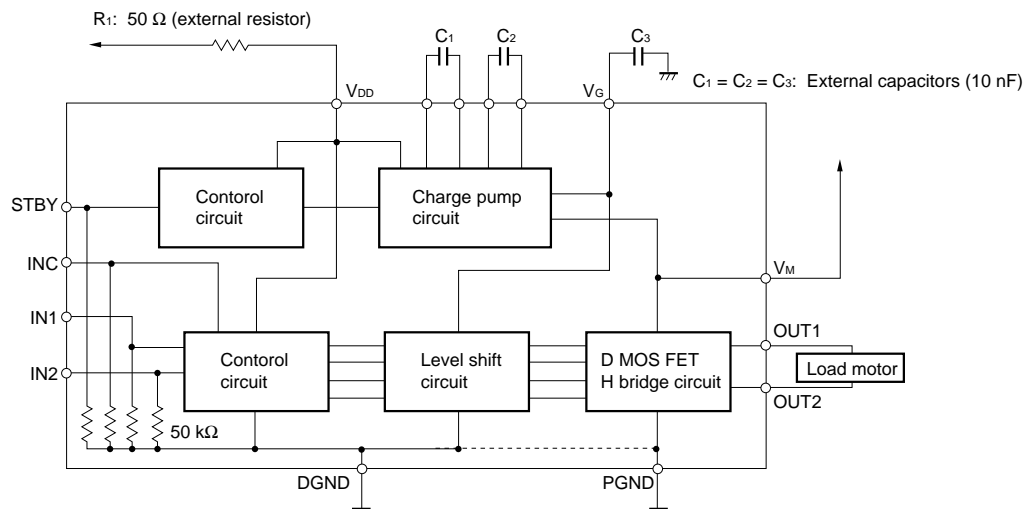

This IC supports a drive current of up to 0.5 A (DC).

FEATURES

- High drive current
 $I_{DR} = 3 \text{ A MAX. at } PW \leq 200 \text{ ms (single pulse)}$
 $I_{DR} = 0.5 \text{ A (DC)}$
- Low-ON resistance (sum of ON resistances of top and bottom MOS FET)
 $R_{ON} = 0.6 \Omega \text{ TYP. at } I_{DR} = 0.5 \text{ A}$
- Standby function that turns OFF charge pump circuit
- Compact surface mount package
 16-pin plastic SOP (300 mil)

ORDERING INFORMATION

Part Number	Package
μ PD16804GS	16-pin plastic SOP (300 mil)

PIN CONFIGURATION (Top View)**BLOCK DIAGRAM**

ABSOLUTE MAXIMUM RATINGS

Parameter	Symbol	Conditions	Rating	Unit
Supply voltage	V _{DD}		−0.5 to +6.5/+8.0 ^{Note}	V
	V _M		−0.5 to +6.5/+8.0 ^{Note}	
V _G pin applied voltage	V _G		15	V
Input voltage	V _{IN}		−0.5 to V _{DD} + 0.5	V
H bridge drive current	I _{DR1}	DC	0.5	A
	I _{DR2}	PW ≤ 200 ms (single pulse)	3.0	A
Power consumption	P _T	T _A = 25 °C	1.0	W
Operating temperature range	T _A		−30 to +60	°C
Operating junction temperature	T _{J (MAX)}		150	°C
Storage temperature range	T _{stg}		−55 to +150	°C

Note V_{DD} when the charge pump is used/V_{DD} and V_M when V_G is supplied from an external source

RECOMMENDED OPERATING CONDITIONS

Parameter	Symbol	Conditions	Ratings			Unit
			MIN.	TYP.	MAX.	
Supply voltage	V _{DD}	During normal operation	3.0		6.0/7.5 ^{Note 2}	V
		All input pins are low	2.5			
	V _M		0.5		7.5	V
Charge pump capacitance	C ₁ to C ₃			10		nF
V _G pin applied voltage ^{Note 1}	V _G		11		14	V
Operating temperature	T _A	Ambient temperature	−30		60	°C

Notes 1. When a voltage is applied from an external source to the V_G pin

2. When the charge pump is used/when V_G is supplied from an external source

ELECTRICAL SPECIFICATIONS (Unless otherwise specified, $T_A = 25\text{ }^{\circ}\text{C}$, $V_{DD} = \text{recommended operating condition}$, $V_M = 0.5 \text{ to } 7.5 \text{ V}$)

Parameter	Symbol	Conditions	Ratings			Unit
			MIN.	TYP.	MAX.	
V_{DD} pin current	I_{DD1}	$V_{DD} = 5 \text{ V}$, $T_A = \text{recommended conditions}$ Control pins at high level		0.6	2.0	mA
	I_{DD2}	$V_{DD} = 5 \text{ V}$, $T_A = \text{recommended conditions}$ Control pins at low level		0.3	10	μA
V_M pin current	I_{M1}	Control pins at low level $T_A = \text{recommended conditions}$		0.1	10	μA
	I_{M2}	Control pins at low level			1.0	μA
H bridge ON resistance ^{Note}	R_{ON}	$I_{DR} = 0.5 \text{ A}$, $V_{DD} = V_M = 5 \text{ V}$		0.6	0.8	Ω
Control pin high-level input voltage	V_{IH}	$T_A = \text{recommended condition}$	$V_{DD} \times 0.6$			V
Control pin low-level input voltage	V_{IL}	$T_A = \text{recommended condition}$			$V_{DD} \times 0.2$	V
Charge pump circuit turn-ON time	t_{ONG}	$V_{DD} = V_M = 5 \text{ V}$, $T_A = \text{recommended conditions}$ $C_1 = C_2 = C_3 = 10 \text{ nF}$ $I_{DR} = 0.5 \text{ A}$		0.5	1.0	ms
H bridge output circuit turn-ON time	t_{ONH}				10	μs
H bridge output circuit turn-OFF time	t_{OFFH}				5.0	μs
Control pin input pull-down resistor	R_{IND}		35	50	65	kΩ
		$T_A = \text{recommended condition}$	25		75	kΩ

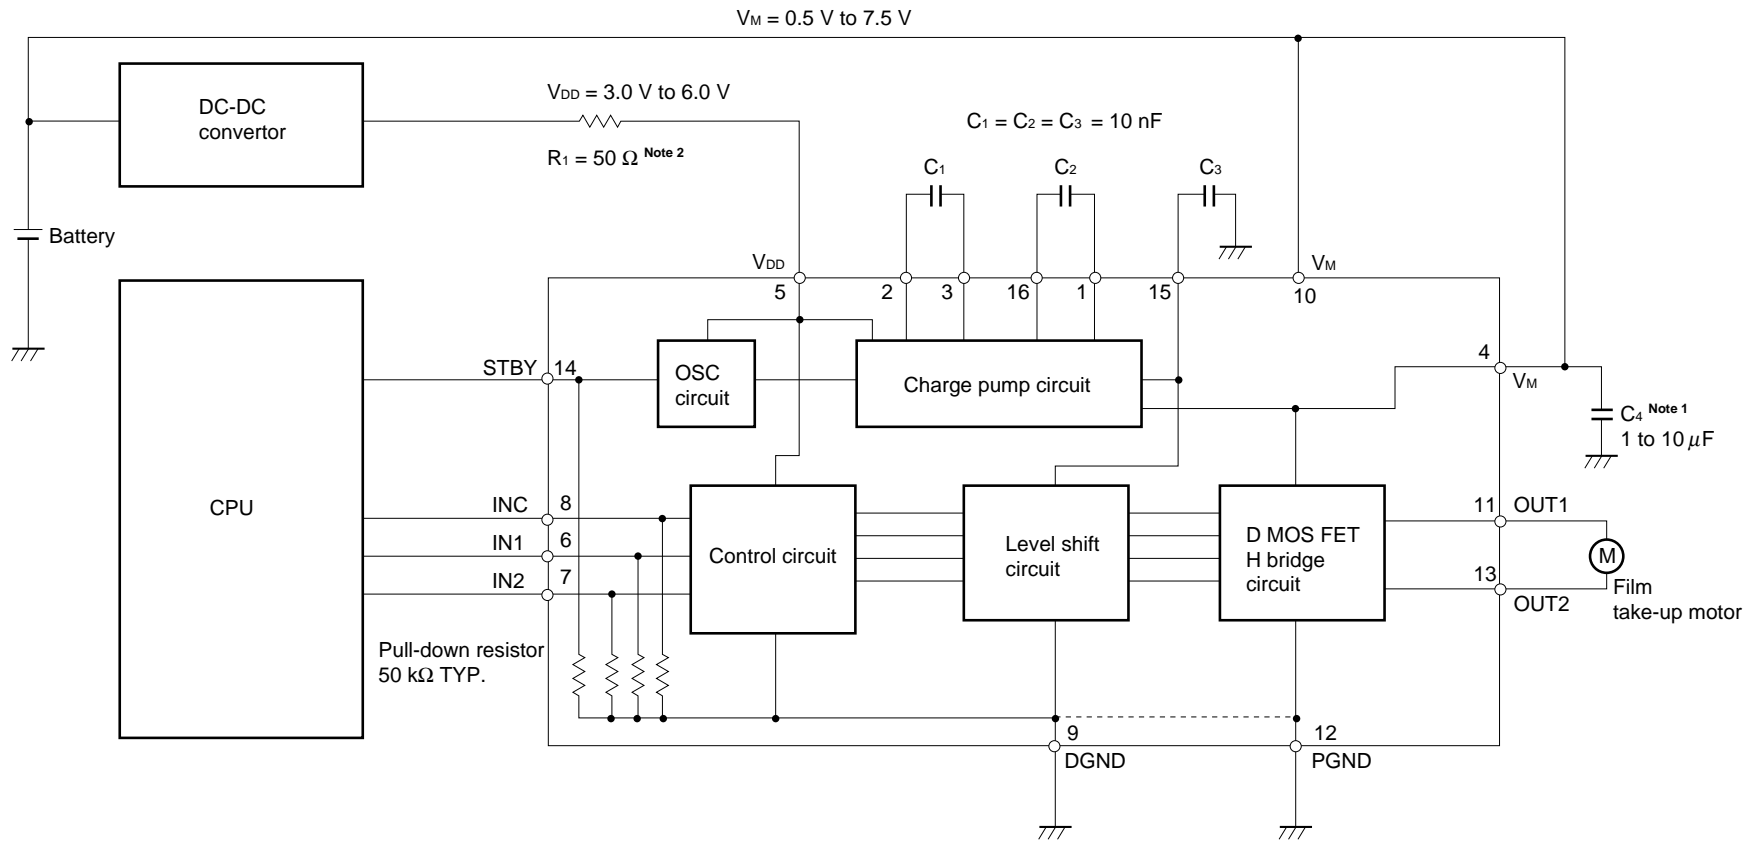

Note Sum of ON resistances of top and bottom MOS FETs

FUNCTION TABLE

Input Signal				Function
IN1	IN2	INC	STB	
H	L	H	H	Forward mode
L	H	H	H	Reverse mode
H	H	H	H	Brake mode
L	L	H	H	Stop mode
×	×	L	H	Stop mode
×	×	×	L	Standby mode

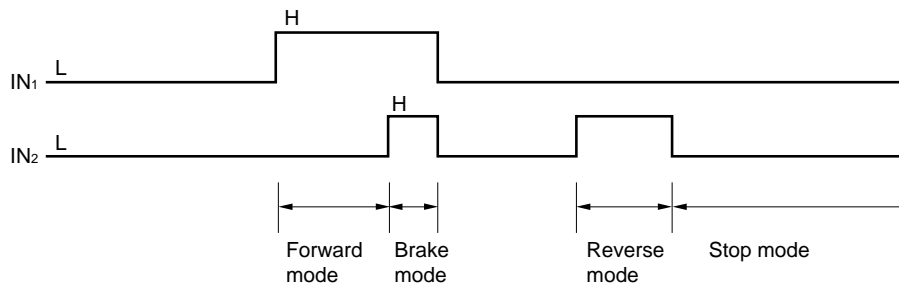

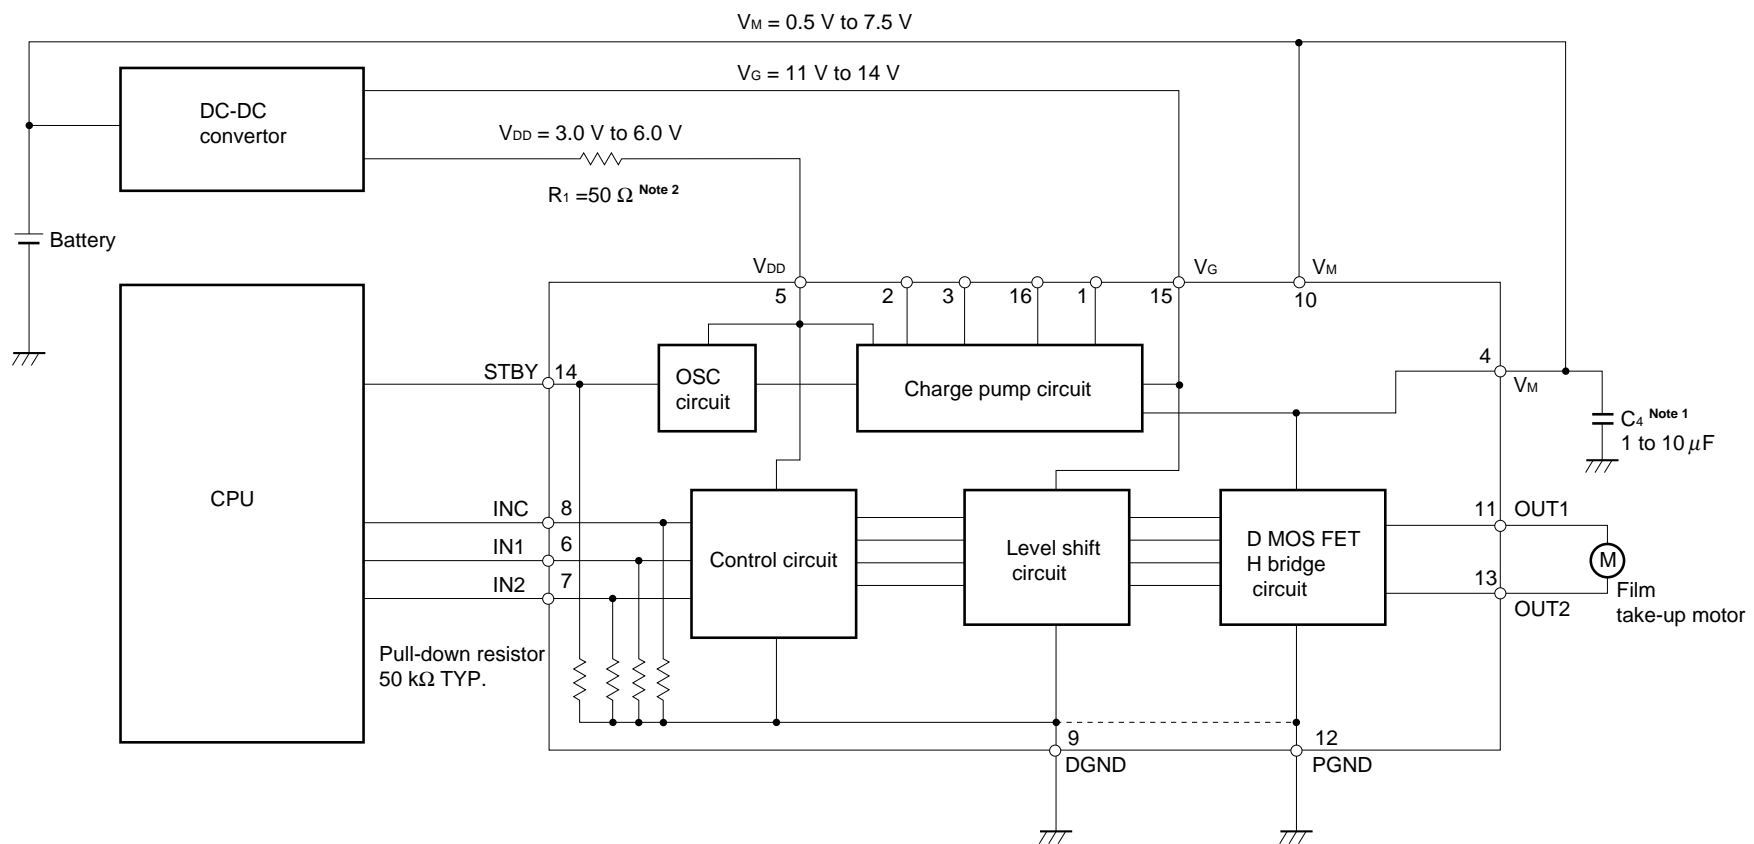

APPLICATION CIRCUIT 1

- Notes**
1. It is recommended to connect a capacitor of 1 to 10 μF between V_M and GND to protect the gate of the DMOS FET from surge voltage.
 2. Insert a resistor of 50 (±10) Ω to prevent malfunctioning.

APPLICATION CIRCUIT 2

- Notes**
1. It is recommended to connect a capacitor of 1 to 10 μF between V_M and GND to protect the gate of the DMOS FET from surge voltage.
 2. Insert a resistor of 50 (±10) Ω to prevent malfunctioning.

TYPICAL CHARACTERISTICS ($T_A = 25^\circ\text{C}$)

PACKAGE DIMENSION

16 PIN PLASTIC SOP (300 mil)

NOTE

Each lead centerline is located within 0.12 mm (0.005 inch) of its true position (T.P.) at maximum material condition.

ITEM	MILLIMETERS	INCHES
A	10.46 MAX.	0.412 MAX.
B	0.78 MAX.	0.031 MAX.
C	1.27 (T.P.)	0.050 (T.P.)
D	0.40 ^{+0.10} _{-0.05}	0.016 ^{+0.004} _{-0.003}
E	0.1±0.1	0.004±0.004
F	1.8 MAX.	0.071 MAX.
G	1.55	0.061

RECOMMENDED SOLDERING CONDITIONS

It is recommended to solder this product under the conditions described below.
For soldering methods and conditions other than those listed below, consult NEC.

Surface mount type

For the details of the recommended soldering conditions of this type, refer to **Semiconductor Device Mounting Technology Manual (C10535E)**.

μPD16804GS

Soldering Method	Soldering Conditions	Symbol of Recommended Soldering
Infrared reflow	Peak package temperature: 235 °C, Time: 30 seconds MAX. (210 °C MIN.), Number of times: 2 MAX.	IR35-00-2
VPS	Peak package temperature: 215 °C, Time: 40 seconds MAX. (200 °C MIN.), Number of times: 2 MAX.	VP15-00-2
Wave soldering	Soldering bath temperature: 260 °C Time: 10 seconds MAX., Preheating temperature: 120 °C MAX. (package surface temperature), Number of times: 1	WS60-00-1

Note The number of storage days at 25 °C, 65% RH after the dry pack has been opened

Caution Do not use two or more soldering methods in combination (except pin partial heating).

No part of this document may be copied or reproduced in any form or by any means without the prior written consent of NEC Corporation. NEC Corporation assumes no responsibility for any errors which may appear in this document.

NEC Corporation does not assume any liability for infringement of patents, copyrights or other intellectual property rights of third parties by or arising from use of a device described herein or any other liability arising from use of such device. No license, either express, implied or otherwise, is granted under any patents, copyrights or other intellectual property rights of NEC Corporation or others.

While NEC Corporation has been making continuous effort to enhance the reliability of its semiconductor devices, the possibility of defects cannot be eliminated entirely. To minimize risks of damage or injury to persons or property arising from a defect in an NEC semiconductor device, customers must incorporate sufficient safety measures in its design, such as redundancy, fire-containment, and anti-failure features.

NEC devices are classified into the following three quality grades:

"Standard", "Special", and "Specific". The Specific quality grade applies only to devices developed based on a customer designated "quality assurance program" for a specific application. The recommended applications of a device depend on its quality grade, as indicated below. Customers must check the quality grade of each device before using it in a particular application.

Standard: Computers, office equipment, communications equipment, test and measurement equipment, audio and visual equipment, home electronic appliances, machine tools, personal electronic equipment and industrial robots

Special: Transportation equipment (automobiles, trains, ships, etc.), traffic control systems, anti-disaster systems, anti-crime systems, safety equipment and medical equipment (not specifically designed for life support)

Specific: Aircrafts, aerospace equipment, submersible repeaters, nuclear reactor control systems, life support systems or medical equipment for life support, etc.

The quality grade of NEC devices is "Standard" unless otherwise specified in NEC's Data Sheets or Data Books. If customers intend to use NEC devices for applications other than those specified for Standard quality grade, they should contact an NEC sales representative in advance.

Anti-radioactive design is not implemented in this product.
