

# NPN Silicon Phototransistors

## Types OP509A, OP509B, OP509C

### Features

- Lensed for high sensitivity
- Easily stackable on 0.100 inch (2.54 mm) hole centers
- Low cost plastic package
- Mechanically and spectrally matched to the OP169 and OP269 series of infrared emitting diodes

### Description

The OP509 series consist of NPN silicon phototransistors mounted in lensed, clear plastic, "end looking" packages. The lensing effect of the package allows an acceptance half angle of 25° measured from the optical axis to the half power point.

### Absolute Maximum Ratings ( $T_A = 25^\circ\text{C}$ unless otherwise noted)

Collector-Emitter Voltage	30 V
Emitter-Collector Voltage	5.0 V
Storage and Operating Temperature Range	-40° C to +100° C
Lead Soldering Temperature [1/16 inch (1.6 mm) from case for 5 sec. with soldering iron]	260° C <sup>(1)</sup>
Power Dissipation	100 mW <sup>(2)</sup>

#### Notes:

- (1) RMA flux is recommended. Duration can be extended to 10 seconds max. when flow soldering. Maximum 20 grams force may be applied to the leads when soldering.
- (2) Derate linearly 1.33 mW/° C above 25° C.
- (3) Light source is an unfiltered GaAs LED with a peak emission wavelength of 935 nm and a radiometric intensity level which varies less than 10% over the entire lens surface of the phototransistor being tested.
- (4) To calculate typical collector dark current in  $\mu\text{A}$ , use the formula  $I_{CE0} = 10^{(0.040T_A - 3.4)}$  where  $T_A$  is ambient temperature in ° C.

### Typical Performance Curves
