## Bus interface latches

## 74F841/74F842/74F843/ 74F845/74F846

*74F841/74F842 10-bit bus interface latches, non-inverting/inverting (3-State)*

*74F843 9-bit bus interface latch, non-inverting (3-State)*

*74F845/74F846 8-bit bus interface latches, non-inverting/inverting (3-State)*

### FEATURES

- High speed parallel latches
- Extra data width for wide address/data paths or buses carrying parity
- High impedance NPN base input structure minimizes bus loading
- IIL is 20 $\mu$ A vs 1000A for AM29841 series
- Buffered control inputs to reduce AC effects
- Ideal where high speed, light loading, or increased fan-in are required as with MOS microprocessors
- Positive and negative over-shoots are clamped to ground
- 3-State outputs glitch free during power-up and power-down
- 48mA sink current
- Slim dual in-line 300 mil package
- Broadside pinout
- Pin-for-pin and function compatible with AMD AM29841-846 series

| TYPE           | TYPICAL PROPAGATION DELAY | TYPICAL SUPPLY CURRENT (TOTAL) |
|----------------|---------------------------|--------------------------------|
| 74F841, 74F842 | 5.5ns                     | 60mA                           |
| 74F843, 74F845 | 5.5ns                     | 75mA                           |
| 74F846         | 6.2ns                     | 60mA                           |

### DESCRIPTION

The 74F841–74F846 bus interface latch series are designed to provide extra data width for wider address/data paths of buses carrying parity.

The 74F841–74F846 series are functionally pin compatible to the AMD AM29841–AM29846 series.

The 74F841 consists of ten D-type latches with 3-State outputs. The flip-flops appear transparent to the data when Latch Enable (LE) is High. This allows asynchronous operation, as the output transition follows the data in transition. On the LE High-to-Low transition, the data that meets the setup and hold time is latched.

Data appears on the bus when the Output Enable ( $\overline{OE}$ ) is Low. When  $\overline{OE}$  is High the output is in the High-impedance state.

The 74F842 is the inverted output version of the 74F841.

The 74F843 consists of nine D-type latches with 3-State outputs. In addition to the LE and  $\overline{OE}$  pins, the 74F843 has a Master Reset ( $\overline{MR}$ ) pin and Preset ( $\overline{PRE}$ ) pin. These pins are ideal for parity bus interfacing in high performance systems. When  $\overline{MR}$  is Low, the outputs are Low if  $\overline{OE}$  is Low. When  $\overline{MR}$  is High, data can be entered into the latch. When  $\overline{PRE}$  is Low, the outputs are High, if  $\overline{OE}$  is Low,  $\overline{PRE}$  overrides  $\overline{MR}$ .

The 74F845 consists of eight D-type latches with 3-State outputs. In addition to the LE,  $\overline{OE}$ ,  $\overline{MR}$  and  $\overline{PRE}$  pins, the 74F845 has two additional  $\overline{OE}$  pins making a total of three Output Enables ( $\overline{OE0}$ ,  $\overline{OE1}$ ,  $\overline{OE2}$ ) pins.

The multiple Output Enables ( $\overline{OE0}$ ,  $\overline{OE1}$ ,  $\overline{OE2}$ ) allow multi-user control of the interface, e.g.,  $\overline{CS}$ , DMA, and RD/ $\overline{WR}$ .

The 74F846 is the inverted output version of the 74F845.

### ORDERING INFORMATION

| PACKAGES                          | COMMERCIAL RANGE<br>$V_{CC} = 5V \pm 10\%$ ; $T_{amb} = 0^{\circ}C$ to $+70^{\circ}C$ | PACKAGE DRAWING NUMBER |
|-----------------------------------|---|------------------------|
| 24-pin plastic Slim DIP (300 mil) | N74F841N, N74F842N, N74F843N, N74F845N, N74F846N                                      | SOT222-1               |
| 24-pin plastic SOL                | N74F841D, N74F842D, N74F843D, N74F845D, N74F846D                                      | SOT137-1               |

### INPUT AND OUTPUT LOADING AND FAN-OUT TABLE

| PINS                               | DESCRIPTION                      | 74F(U.L.) HIGH/LOW | LOAD VALUE HIGH/LOW   |
|------------------------------------|----------------------------------|--------------------|-----------------------|

### ABSOLUTE MAXIMUM RATINGS

Operation beyond the limits set forth in this table may impair the useful life of the device.

Unless otherwise noted these limits are over the operating free-air temperature range.

| SYMBOL           | PARAMETER                                      | RATING                  | UNIT |
|------------------|--|-------------------------|------|
| V <sub>CC</sub>  | Supply voltage                                 | −0.5 to +7.0            | V    |
| V <sub>IN</sub>  | Input voltage                                  | −0.5 to +7.0            | V    |
| I <sub>IN</sub>  | Input current                                  | −30 to +5               | mA   |

## NOTES:

- For conditions shown as MIN or MAX, use the appropriate value specified under recommended operating conditions for the applicable type.
- All typical values are at  $V_{CC} = 5\text{V}$ ,  $T_{amb} = 25^\circ\text{C}$ .
- Not more than one output should be shorted at a time. For testing  $I_{OS}$ , the use of high-speed test apparatus and/or sample-and-hold techniques are preferable in order to minimize internal heating and more accurately reflect operational values. Otherwise, prolonged shorting of a High output may raise the chip temperature well above normal and thereby cause invalid readings in other parameter tests. In any sequence of parameter test,  $I_{OS}$  tests should be performed last.

Bus interface latches

74F841/74F842/74F843/  
74F845/74F846

AC WAVEFORMS

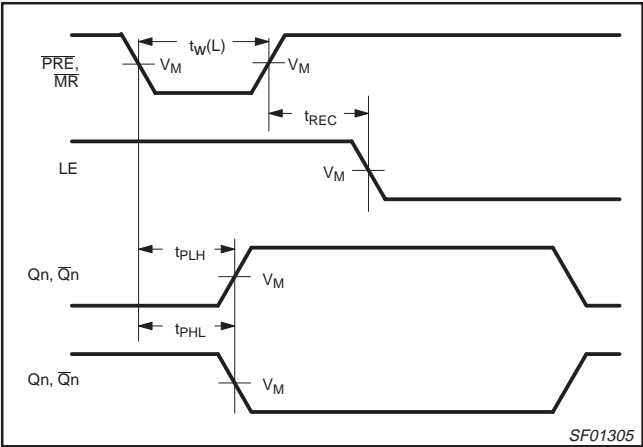

For all waveforms,  $V_M = 1.5V$ .  
The shaded areas indicate when the input is permitted to change for predictable output performance.

Waveform 1. Propagation Delay, Non-Inverting Path

Waveform 2. Propagation Delay, Inverting Path

Waveform 3. Master Reset and Preset Pulse Width,  
Master Reset and Preset to Output Delay,  
and Master Reset and Preset to Latch Enable Recovery Time

Waveform 4. Data Setup and Hold Times

Waveform 5. 3-State Output Enable Time to High Level  
and Output Disable Time from High Level

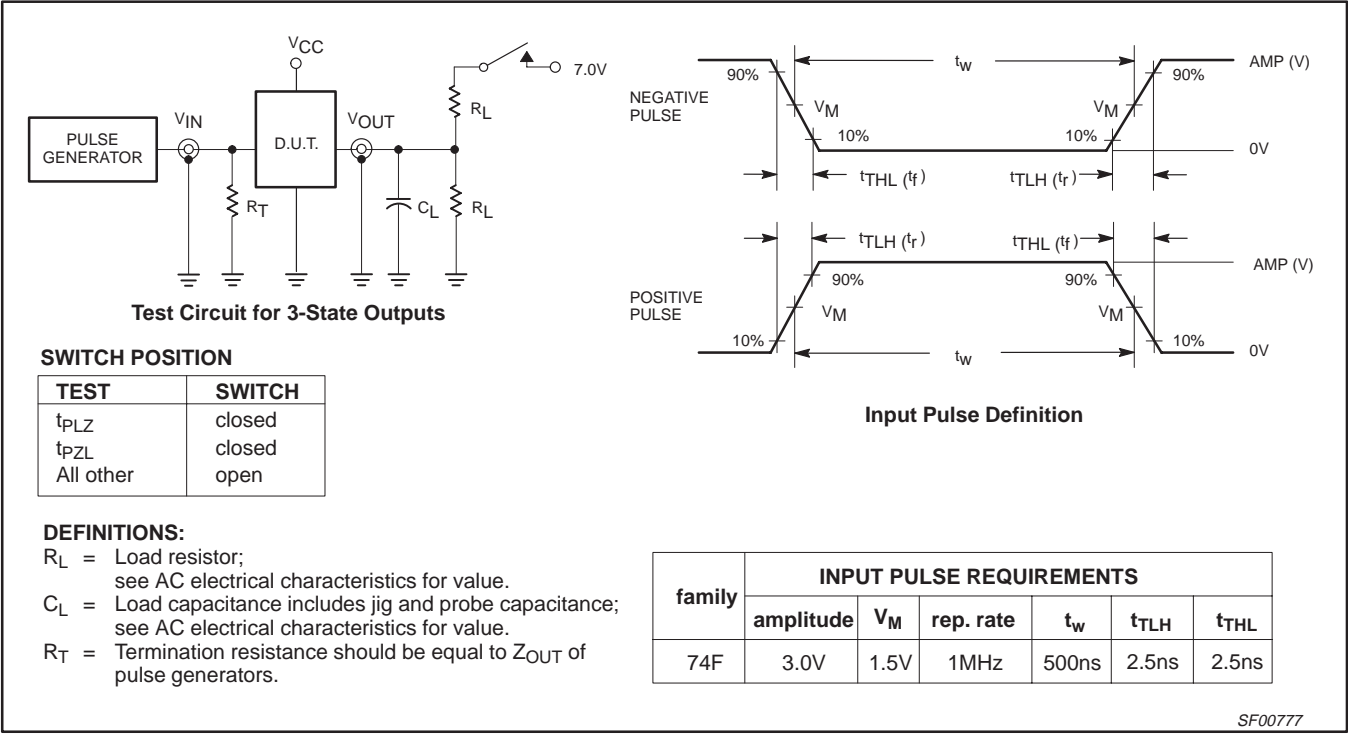

Waveform 6. 3-State Output Enable Time to Low Level  
and Output Disable time from Low Level

Bus interface latches

## Data sheet status

| Data sheet status         | Product status | Definition [1]   |
|---------------------------|----------------|--|
| Objective specification   | Development    | This data sheet contains the design target or goal specifications for product development. Specification may change in any manner without notice.  |
| Preliminary specification | Qualification  | This data sheet contains preliminary data, and supplementary data will be published at a later date. Philips Semiconductors reserves the right to make changes at any time without notice in order to improve design and supply the best possible product. |
| Product specification     | Production     | This data sheet contains final specifications. Philips Semiconductors reserves the right to make changes at any time without notice in order to improve design and supply the best possible product.   |

[1] Please consult the most recently issued datasheet before initiating or completing a design.

## Definitions

**Short-form specification** — The data in a short-form specification is extracted from a full data sheet with the same type number and title. For detailed information see the relevant data sheet or data handbook.

**Limiting values definition** — Limiting values given are in accordance with the Absolute Maximum Rating System (IEC 134). Stress above one or more of the limiting values may cause permanent damage to the device. These are stress ratings only and operation of the device at these or at any other conditions above those given in the Characteristics sections of the specification is not implied. Exposure to limiting values for extended periods may affect device reliability.

**Application information** — Applications that are described herein for any of these products are for illustrative purposes only. Philips Semiconductors make no representation or warranty that such applications will be suitable for the specified use without further testing or modification.

## Disclaimers

**Life support** — These products are not designed for use in life support appliances, devices or systems where malfunction of these products can reasonably be expected to result in personal injury. Philips Semiconductors customers using or selling these products for use in such applications do so at their own risk and agree to fully indemnify Philips Semiconductors for any damages resulting from such application.

**Right to make changes** — Philips Semiconductors reserves the right to make changes, without notice, in the products, including circuits, standard cells, and/or software, described or contained herein in order to improve design and/or performance. Philips Semiconductors assumes no responsibility or liability for the use of any of these products, conveys no license or title under any patent, copyright, or mask work right to these products, and makes no representations or warranties that these products are free from patent, copyright, or mask work right infringement, unless otherwise specified.
