DESCRIPTION

The HEF4520B is a dual 4-bit internally synchronous binary counter. The counter has an active HIGH clock input (CP₀) and an active LOW clock input ($\overline{\text{CP}}_1$), buffered outputs from all four bit positions (O₀ to O₃) and an active HIGH overriding asynchronous master reset input (MR). The counter advances on either the LOW to HIGH transition of the CP₀ input if $\overline{\text{CP}}_1$ is HIGH or the HIGH to

LOW transition of the $\overline{\text{CP}}_1$ input if CP₀ is low. Either CP₀ or $\overline{\text{CP}}_1$ may be used as the clock input to the counter and the other clock input may be used as a clock enable input. A HIGH on MR resets the counter (O₀ to O₃ = LOW) independent of CP₀, $\overline{\text{CP}}_1$. Schmitt-trigger action in the clock input makes the circuit highly tolerant to slower clock rise and fall times.

FUNCTION TABLE

CP_0	\overline{CP}_1	MR	MODE
	H	L	counter advances
L		L	counter advances
	X	L	no change
X		L	no change
	L	L	no change
H		L	no change
X	X	H	O_0 to O_3 = LOW

Notes

- H = HIGH state (the more positive voltage)
L = LOW state (the less positive voltage)
X = state is immaterial
 = positive-going transition
 = negative-going transition
