

Digital transistors (built-in resistors)

DTA113ZE / DTA113ZUA / DTA113ZKA / DTA113ZSA

●Features

- 1) The built-in bias resistor allows the configuration of an inverter circuit without connecting any external input resistors (see Equivalent circuit).
- 2) Each bias resistor is a thin-film resistor. Since they are completely insulated, the input can be positively biased. The insulation also eliminates most of the parasitic effects.
- 3) Circuit design is simplified since only the OFF and the ON conditions have to be set.
