

The NF2003-VA10A is a flat thin-film thermal printhead capable of printing speeds up to 12 inch / second, and suited for general purpose compact printers as well as label printers.

## ●Applications

## Bar code label printers

## Ticket printers

### General purpose compact printers

## ●Features

- 1) Special glazed components for high speed, high quality printing.
- 2) High speed clock (10MHz) to facilitate external heat history control.
- 3) Using a hard conductive film as a protective film on the heating element offers excellent resistance to electrostatic damage.

● External dimensions (Units: mm)

Note: No heat history control function inside the thermal printhead. External heat history control is required for high speed printing.
