## GENERAL DESCRIPTION

### DESCRIPTION

LT104V3- 10S is the color active matrix TFT (Thin Film Transistor) liquid crystal display (LCD) using amorphous silicon TFT's as switching devices. It is composed of a TFT LCD panel, driver circuit and backlight system. The 10.4 inches diagonal display area contains 640 x 480 pixels and can display 262,144 colors. Optimum viewing direction is 6 o'clock. 400 line and 350 line mode in addition to the 480 line mode can be also applied for this module

### FEATURES

- Thin and light weight
- High contrast ratio, wide viewing angle, wide color gamut
- High-speed response
- VGA (640x480 pixels)
- Low power consumption
- Single CCFL
- Sync only function.

### APPLICATIONS

- A4 size notebook computer
- Display terminals for NC machine
- Control board for NC machine
- Monitors for process controller

### General Specifications

ITEM	SPECIFICATION	UNIT
Display area	211.2(H) x 158.4(V) (diagonal size 10.4 ")	mm
Drive	a-Si TFT active matrix	
Display colors	262,144 colors	
Number of pixels	640 x 480	pixel
Pixel arrangement	RGB vertical stripe	
Pixel pitch	0.33(H) x 0.33(W)	mm
Module Size	264(W) x 180(H) x 9.3(D)	mm
Weight	500 (Typ.)	g

Maximum Dark Luminosity				-	-	1	cd/m <sup>2</sup>	(7)

Note (1) Definition of Viewing Angle

Note (2) Definition of Contrast Ratio(CR)

$$CR = \frac{\text{Luminance(Brightness) of white}}{\text{Luminance(Brightness) of Black}}$$

Note (3) Definition of Response time

Note (4) Definition of Luminance : This luminance provided at 3.5mA of CCFT lamp current

Note (5) Definition of Uniformity : check the white luminance variation at 5 test points

$$\text{Uniformity} = \frac{\text{MAX luminance}}{\text{MIN luminance}}$$

Note (6) Definition of Cross Modulation

$$\text{Cross Modulation Ratio} = \frac{|Y_B - Y_A|}{Y_B} \times 100 (\%)$$

Where:

$Y_A$  = Luminance of measured location without darkest gray pattern (  $\text{cd/m}^2$  )

$Y_B$  = Luminance of measured location with darkest gray pattern (  $\text{cd/m}^2$  )

Note (7) Test condition

- At least 20 minutes after CCFT turn on and being run at 40KHz and a 3.6mA current
- $V_{cc}$  shall be  $12.0 \pm 0.1$  volts at  $25^\circ\text{C}$

## 6-2. Timing diagrams of interface signal

### 1) Display Signal Timing Diagram(480 Line Mode)

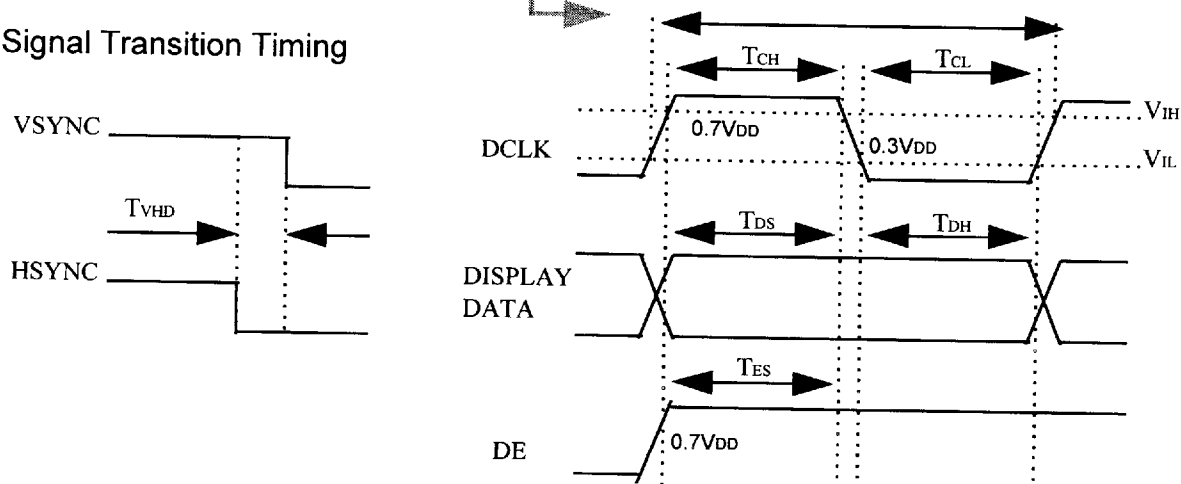

### Signal Transition Timing

The diagram illustrates the timing relationships for several signals during a transition. On the left, a vertical section shows the VSYNC and HSYNC signals. VSYNC is a high-to-low transition, and HSYNC is a low-to-high transition. The time from the start of VSYNC to the start of HSYNC is labeled  $T_{VHD}$ . On the right, a horizontal section shows the DCLK, DISPLAY DATA, and DE signals. DCLK is a clock signal with high level  $V_{IH}$  and low level  $V_{IL}$ . The high-to-low transition time is  $T_{CH}$  and the low-to-high transition time is  $T_{CL}$ . The signal levels during the transition are  $0.7V_{DD}$  and  $0.3V_{DD}$ . DISPLAY DATA is a data signal that transitions from high to low and back to high. The high-to-low transition time is  $T_{DS}$  and the low-to-high transition time is  $T_{DH}$ . DE is a data enable signal that transitions from low to high. The time from the start of DCLK to the start of DE is  $T_{ES}$ . The signal level during the transition is  $0.7V_{DD}$ .

### 6-3. Power ON/OFF Sequence

: To prevent a latch-up or DC operation of the LCD module, the power on/off sequence shall be as shown below.

Power ON/OFF Sequence

\*. Set  $0V < V_1(t) < V_{pp}(t)$

Here,  $V_1(t)$ ,  $V_{pp}(t)$  indicate the transit state of  $V_1$ ,  $V_{pp}$  when the power supply is turned ON or OFF

NOTE. Do not keep the interface signal high-impedance when power is on.

## 8. RELIABILITY TEST

No.	Test Item	Condition
1	High temperature storage test	Ta = 60 °C, 250hr
2	Low temperature storage test	Ta = 25 °C, 250hr
3	High temperature & high humidity operation test	Ta = 40 °C, 90%, 250hr (No condensation)
4	High temperature operation test	Ta = 50°C, Dynamic, 250hr
5	Low temperature operation test	Ta = 0 °C, Dynamic, 250hr
6	Vibration test (non-operatiing)	Frequency : 10 - 55 Hz Stroke : 1.5mm Test period : 6 hr (2hr for each direction of X,Y,Z)
7	Shock test (non-operating)	Max. gravity : 980 m/s <sup>2</sup> Pulse width : 6ms, half sine wave Direction : $\pm X$ , $\pm Y$ , $\pm Z$ One time for each direction
8	Thermal shock	-20°C (0.5 hr) 60°C (0.5hr) 50 Cycle
9	Electrostatic Discharge Test	200 pF, 0 ohm $\pm 200V$ (Terminal) $\pm 5000V$ (Chassis & Panel)

### [ Result Evaluation Criteria]

Under the dispaly quality test conditions with normal operation state, these shall be no change which may affect practical display function.

## 9. PACKING, TRANSPORTATION, AND DELIVERY

Supplier will pack products to be delivered to customer in accordance with supplier's packing specifications, and will deliver them to customer in such a state that they will not suffer damage during transportation. The delivery conditions are as follows.

### (1) Outer box

As shown in the figure, one or two inner boxes are packed in an outer box.

There is a risk of damage to the products if the outer box is dropped from a height of 70<sub>cm</sub> or more, and therefore care should be taken in handling the box during transportation.

When a box is stored in a warehouse, etc., care should be taken to ensure that the storage temperature is not exceeded.

### (2) Inner box

The parts number and quantity are shown on the inner box, either printed directly or on a label.

Products should not be transported in the inner box alone, since there is a risk of damage. Moisture-proofing material silicagel is to be placed on the inner boxes, and they are then to be covered in moisture-proof vinyl sheet.

### (3) Means of transportation

Products are to be transported by hand, light van, truck, by air

## 10. MARKINGS

A nameplate bearing the following information is affixed to a shipped product at the specified location on each product.

(1) Parts number : 1AA 000 - 00 - 00

(2) Revision : One letter

(3) Control code : One letter

(4) Lot number : 1 A A 000 A-00

## 11. PRODUCT INSPECTION

When products are shipped, incoming inspection shall be carry out with a sampling inspection based on MIL-STD-105E level II by AQL 1.0%.

### CHANGE CONTROL

Design changes may be made for this product relating to the specifications, appearance, parts used, circuits, etc., for the purpose of product improvement. If a design change is judged to affect the specifications of this product, supplier shall inform customer of the change in advance.

### QUALITY CONTROL

In the event of a product failure under normal operating conditions, and in the event of product trouble or a functional disorder that can be deemed to be the responsibility of supplier, supplier shall repair the fault or replace the product free of charge within one year of the product delivery date. However, supplier shall not bear responsibility for the quality of a product in the case of modifications other than those specified by supplier.

### MAINTENANCE

The specifications of the functions of maintenance parts may be partially changed with in a range which provides for equivalent or better quality. Maintenance parts shall in principle be product units. If manufacture of this product is stopped, supplier shall notify customer in advance.

### HANDLING OF DOUBTFUL POINTS

If any doubt arises concerning a matter not stipulated in this specification, the matter is to be resolved by mutual agreement between customer and supplier, and supplier shall make efforts for improvement in good faith.

## 12. Handling Precautions

1. Be sure to turn off the power supply when inserting or disconnecting the cable.
2. Others
  - a) Be sure to design the cabinet so that the module can be installed without any extra stress such as wrap or twist.
  - b) Since the front polarizer is easily damaged. pay attention not to scratch it.
  - c) Wipe off water drop immediately. Long contact with water may cause discoloration or spot
  - d) When the panel surface become solid, wipe it with absorbent cotton or other soft cloth.
  - e) Since the panel is made of glass, it may break or crack if dropped or bumped on hard surface. Handle with care
  - f) Since CMOS LSI is used in this module, take care of static electricity and injure the human earth when handling
  - g) Observe all other precautionary requirements in handling components.
