		Auto-Loudness Controller for Headphone Stereo Systems

Overview

The LA3550M Auto-Loudness Controller IC provides user-selectable boosting of up to approximately 24dB for low-frequency sound components in the range of 30 to 50Hz.

Boosting gain for low frequencies can be controlled in proportion to the level of an external input signal. High frequencies are also boosted by a fixed 6dB. The result gives natural and dynamic booting at all sound levels, and realistic audio reproduction.

The LA3550M operates on a 1.5V power supply and boosts a super bass adopting the external CR circuit. The boosting feature can be selected "ON/OFF" by means of an electronic switch on the chip.

Features

- User-selectable low-frequency boost levels from 5.5 to 23.5dB (max)
- 6dB (fixed) high-frequency boosting
- Low-frequency boost gain level control circuit on-chip
- Output signal detection circuit on-chip
- Boost select/deselect switching
- Built-in AGC circuit prevents clipping
- Reduced noise levels
- Reduced parts' count
- Low-power operation
- 14-pin MFP package (1mm pitch pins)

Maximum Ratings at Ta = 25°C

Maximum Supply Voltage	V_{CC} max	Quiescent	4.5	unit
Allowable Power Dissipation	P_d max		150	mW
Operating Temperature	T_{opr}		-20 to +75	°C
Storage Temperature	T_{stg}		-40 to +125	°C
