**LA8633V****Low-voltage, Low-current Compander****OVERVIEW**

The LA8633V is a low-voltage, low-current compander IC for battery-powered, cordless telephone applications.

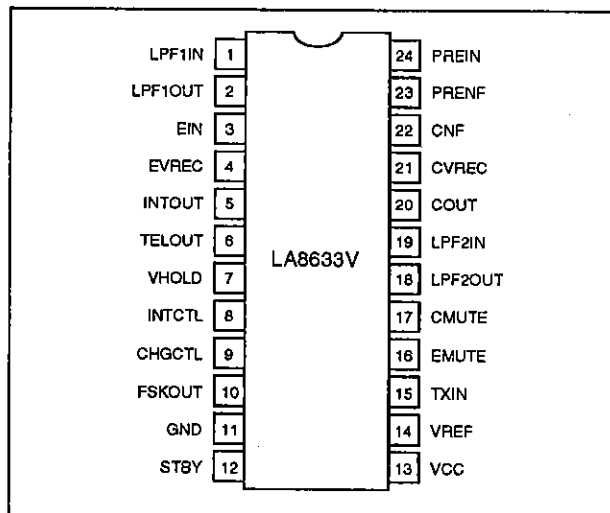

The LA8633V features a good signal-to-noise ratio and a high dynamic range at voice-signal frequencies. The output compression is given by  $V_o = 0.5 \log V_i$ , and the expansion, by the inverse operation.

The LA8633V also features an FSK comparator for receiving FSK-modulated digital data, a microphone amplifier, selectable intercom or telephone operation expander outputs, and an output mute control.

The LA8633V operates from a 1.8 to 6.0 V supply and is available in 24-pin SSOPs.

**FEATURES**

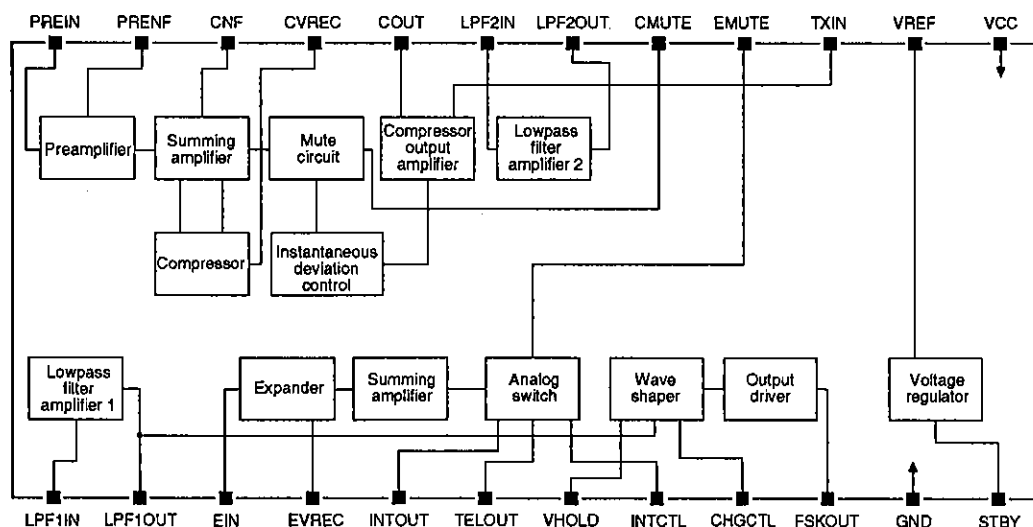

- Low-voltage operation and low-power consumption
- On-chip frequency-shifted keyed (FSK) comparator
- On-chip microphone amplifier with audio limiter and mute option
- Expander output analog switch for telephone or intercom operation
- Low-power, standby mode
- 1.8 to 6.0 V supply
