LB1403N SERIES**5-Dot Red/Green LED Level Meter****Use**

- . AC level meters such as VU meters.
- . DC level meters such as signal meters.

Features and Functions

- . Capable of generating a bar-display for input voltage with 5 LEDs.
- . Operates from either AC or DC input voltage because of on-chip rectifier amplifier.
- . Lighting levels remain stable to line regulation because of on-chip voltage reference.
- . LEDs are driven by a constant current ; stable to line regulation.
- . Power supply voltage range is wide (3.5 to 16V), for a wide range of applications.
- . Five types of ICs constitute the series with various lighting levels of the LEDs and driving currents.
- . SEP-9 pin package and fewer externally connected components result in smaller space requirements on the circuit board.
- . Low noise at LED lighted mode

Sample Application Circuit and Test Circuit (AC input VU meter)

* Capacitor to be omitted when used as a DC-input signal meter.

• C_1 , R_1 time constant:The response time can be varied by varying the C_1 , R_1 time constant (mainly the C_1 value).

Continued on next page.

Continued from preceding page.

When the C_1 , R_1 time constant is larger:

..... The response time (attack time and release time) is made slower.

When the C_1 , R_1 time constant is smaller:

..... The response time (attack time and release time) is made faster.

• Considerations relative to P_d max of the package:

Due to the constant current I_{LED} , most of the power consumed by the circuits is consumed within the IC.

When lighting the five LEDs continuously for a prolonged length of time, make sure that V_{CC} does not exceed:

LB1403N, 1413N, 1443N $V_{CC}=9V$

LB1423N, 1433N $V_{CC}=14V$

When using a higher power supply voltage, insert a resistor in series with the LEDs to restrain the power consumed within the IC package.
