LB1881V**Three-Phase Brushless Motor Driver****Overview**

The LB1881V is a three-phase brushless motor driver IC designed for use as a camcorder capstan or drum motor driver, or as a digital audio tape player/recorder motor driver.

Features

- 120° voltage linear system
- Appropriate for portable applications, since the LB1881M reduces system power requirements by using motor voltage control for speed control.
- Built-in torque ripple compensation circuit
- Small external capacitances due to the adoption of a soft switching technique (chip capacitor).
- Built-in thermal shutdown circuit
- Built-in FG amplifier

Pin Functions

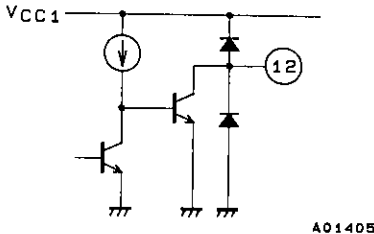

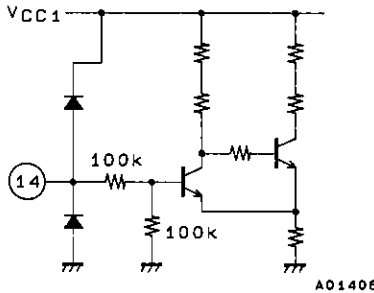

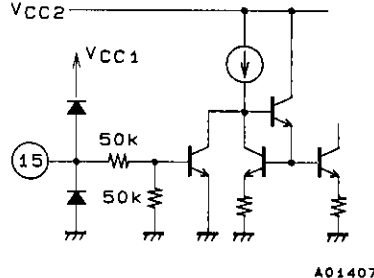

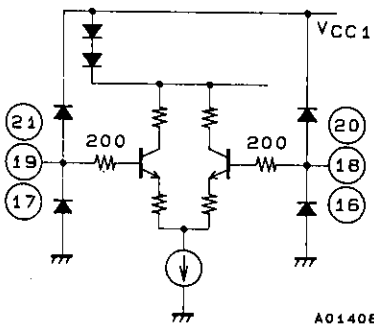

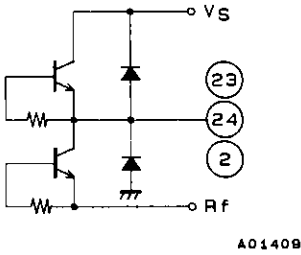

Unit (resistance: Ω)

Pin No.	Symbol	Pin voltage	Equivalent circuit	Pin function
3	V_S	$< V_{CC2}$		Power supply input that determines the output amplitude. It must be set to a voltage lower than V_{CC2} .
4	V_{CC2}	4 to 10 V		Power supply for power amplifier systems other than motor drive transistors. Power supply pin that provides voltage for blocks other than control blocks supplied by V_{CC1} .
5	V_{CC1}	4 to 6 V		Power supply that provides voltage for the Hall amplifier, the forward/reverse circuit, the FG amplifier, and the thermal shutdown circuit.
6	ST. BY	(H): 2.0 V max (L): 0.8 V min (When V_{CC1} is 5 V)	 <p style="text-align: right;">A01401</p>	All circuits can be made inoperative either by connecting this pin to GND, or by leaving it open. In that state the supply current will be approximately 0 μ A. Hold at 2 V or higher during normal operation.
7	ANGLE		 <p style="text-align: right;">A01402</p>	Connect a resistor between this pin and GND. Changing the value of this resistor will change the Hall input-output gain (motor waveform slope).
9 10	FG_{IN}^- FG_{IN}^+	0 V min 3.5 V max (When V_{CC1} is 5 V)	 <p style="text-align: right;">A01403</p>	FG signal input pin
11	FG_{OUT1}		 <p style="text-align: right;">A01404</p>	FG amplifier output pin
