Pin Functions

Number	Name	Pin voltage	Equivalent circuit	Function
3, 4, 20, 21	Frame GND			Frame ground. Connected to the common ground.
22	GND			Ground pin
1 2 5	U_{OUT} V_{OUT} W_{OUT}		<p style="text-align: right;">A02852</p>	Output pins. Connected to the motor.
7	Rf		<p style="text-align: right;">A02853</p>	Output transistor ground. A resistor can be connected between this pin and GND to sense the output current as a voltage drop to provide for overcurrent protection.
6, 34	NC			No connection
8	V_{CC2}	4.3 to 6.5V		Supply for all circuits except the output stage. This supply should be kept stable to prevent noise from entering this pin.
9 10	Z1 Z2		<p style="text-align: right;">A02854</p>	First-stage amplifier gain setting impedance connection. Z1 and Z2 should be in the order of 30kΩ to several hundred kΩ. The gain should be in the order of 6dB.
11 12	V_C V_{Cref}	$V_{CC2}/2 \pm 1.0$	<p style="text-align: right;">A02855</p>	V_C is the speed control pin; forward when $V_C > V_{Cref}$ and reverse when $V_C < V_{Cref}$. The output voltage is controlled by the V_C voltage. V_{Cref} determines the motor control stop voltage, and is normally set to $V_{CC2}/2$.
13 14	GC1 GC2	0 to V_{CC2}	<p style="text-align: right;">A02856</p>	Input gain control switching pin. GC1 switches the first-stage amplifier impedances Z1 and Z2. Z1 is selected when GC1 is LOW, and Z2 is selected when GC1 is HIGH. GC2 is the second-stage amplifier switching pin.

25 26	V_{IN2} V_{IN1}			V-phase Hall device input pins. Logic HIGH is represented by $V_{IN1} > V_{IN2}$.
27 28	U_{IN2} U_{IN1}			U-phase Hall device input pins. Logic HIGH is represented by $U_{IN1} > U_{IN2}$.
29 30	VH+ VH-	2.4V 1.4V		Hall device supply pins. The potential difference between VH+ and VH- is 1.0V.

31	HFG	0 to V_{CC2}		Hall device FG pin. The Hall device waveform is converted to a pulse and used as the FG pulse.
32	CL	0 to V_{CC2}		When the voltage on Rf pin becomes equal to the voltage on CL, the current limiter operates. The CL voltage is determined externally.
33	V_{CC1}	5 to 18V		Output-stage supply pin. This supply should be kept stable to prevent noise from entering this pin.
