LC66P408**4-bit Microcontroller with Built-in PROM****OVERVIEW**

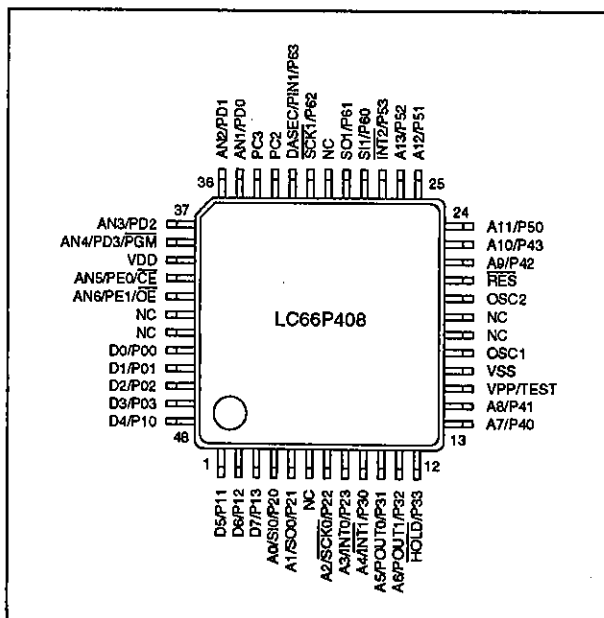

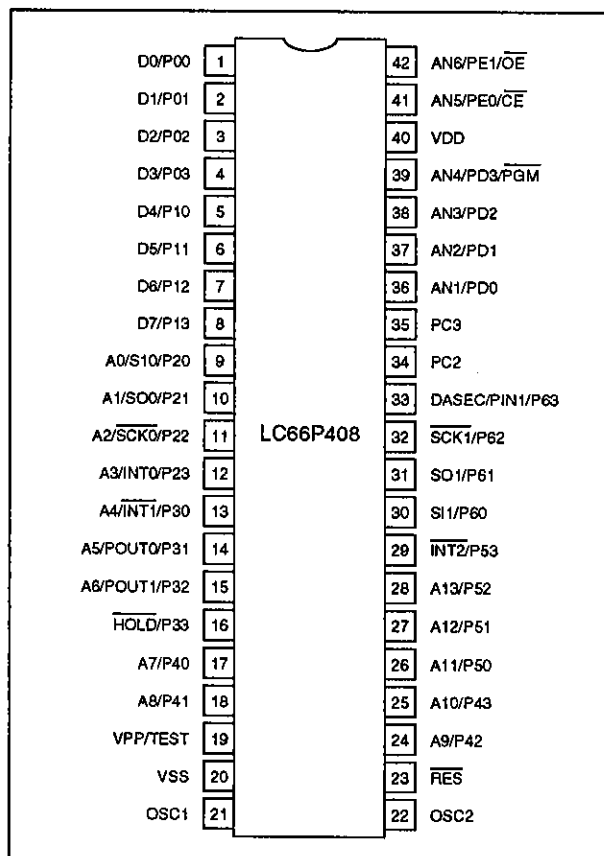

The LC66P408 is a 4-bit microcontroller with a built-in 8 Kbyte PROM. It is compatible with the LC6640X series mask ROM devices, making it ideal for prototyping and software development and testing.

The LC66P408 features 33 user-defined options comprising output configuration, output level after reset, watchdog timer and oscillator configuration options. The output configuration options are open-drain, open-drain with pull-up, and CMOS. The oscillator options are ceramic resonator, RC oscillator and external clock.

The LC66P408 operates from a 5 V supply and is available in 42-pin DIPs and 48-pin QFPs.

FEATURES

- 33 user-defined options including port output configuration, output level after reset and watchdog timer options
- Ceramic resonator, RC oscillator or external clock option
- 8 Kbyte PROM (0000H to 2007H user addressable)
- Compatible with the LC6640X series mask ROM devices
- 0.92 to 10.0 μ s instruction cycle time
- 5 V supply
- 42-pin DIP and 48-pin QFP

INPUT AND OUTPUT FUNCTIONS

The LC66P408 has many multiplexed pins whose function is controlled by software. The function of each of these pins is shown in the following table.

Name	Function
D0/P00	Ports P00 to P03 can be addressed as either a 4-bit port or four, single-bit ports. They function as data bus lines when memory is addressed. They also have half-mode control functions.
D1/P01	
D2/P02	
D3/P03	
D4/P10	Ports P10 to P13 can be addressed as either a 4-bit port or four, single-bit ports. They function as data bus lines when memory is addressed.
D5/P11	
D6/P12	
D7/P13	
A0/SIO/P20	Ports P20 to P23 can be addressed as either a 4-bit port or four, single-bit ports. They function as address bus inputs when memory is addressed. Port P20 also functions as a serial data input, P21 as a serial data output, P22 as a serial data clock and P23 as an interrupt request, pulsewidth measurement and event counter input using timer 0.
A1/SO0/P21	
A2/SCK0/P22	
A3/INT0/P23	
A4/INT1/P30	Ports P30 to P32 can be addressed as either a 3-bit port, a 4-bit port with P33 or three, single-bit ports. They function as address bus inputs when memory is addressed. Port P30 also functions as an interrupt request input, P31 as a square-wave output from timer 0 and P32 as a square-wave output from timer 1 and a PWM output.
A5/POUT0/P31	
A6/POUT1/P32	
HOLD/P33	
A7/P40	Ports P40 to P43 can be addressed as either a 4-bit port, four, single-bit ports or an 8-bit port with P50 to P53. They function as address bus inputs when memory is addressed.
A8/P41	
A9/P42	
A10/P43	
A11/P50	Ports P50 to P53 can be addressed as either a 4-bit port, four, single-bit ports or an 8-bit port with P40 to P43. Ports P50 to P52 function as address bus inputs when memory is addressed. Port P53 also functions as an interrupt request input.
A12/P51	
A13/P52	
INT2/P53	
SI1/P60	Ports P60 to P63 can be addressed as either a 4-bit port or four, single-bit ports. Port P60 also functions as a serial data input, P61 as a serial data output, P62 as a serial data clock and P63 as a data security control input and timer 1 event counter input.
SO1/P61	
SCK1/P62	
DASEC/PIN1/P63	
PC2	Ports PC2 and PC3 can be addressed as either a 2-bit port or two, single-bit ports.
PC3	
AN1/PD0	Ports PD0 to PD3 can be addressed as either a 4-bit port or four, single-bit ports. They also function as analog-to-digital converter inputs. In addition, port PD3 also functions as the memory program control input.
AN2/PD1	
AN3/PD2	
AN4/PD3/PGM	

Name	Function
AN5/PE0/ \overline{CE}	Ports PE0 to PE1 can be addressed as either a 2-bit port or two, single-bit ports. They function as chip enable and write enable, respectively, when memory is addressed. They also function as analog-to-digital converter inputs.
AN6/PE1/ \overline{CE}	
OSC1	OSC1 and OSC2 function as the external ceramic resonator or RC oscillator connections. When an external clock is used, OSC2 is left open.
OSC2	
RES	When RES goes LOW while HOLD/P33 is HIGH, the CPU is reset.
VPP/TEST	CPU test input. Normally connected to ground

USER OPTIONS

Oscillator Options

There are three user options for the oscillator—an external clock, an RC oscillator and a ceramic resonator. The internal circuits of OSC1 and OSC2 for the external clock, RC oscillator and ceramic resonator options are shown in figures 1, 2 and 3, respectively. Note the Schmitt-trigger inputs for both the external clock and RC oscillator options.

Figure 1. External clock option

Figure 2. RC oscillator option

Figure 3. Ceramic resonator option

Output Options

There are two user options for the output configuration of each port—n-channel open drain and p-channel, active pull-up, shown in figures 4 and 5, respectively. Ports P2, P3, P5 and P6 have Schmitt-trigger inputs in both output configurations.

Figure 4. N-channel open-drain option

The p-channel pull-up option for ports P0, P1, P4 and P5 results in an n-channel sink transistor with a p-channel, active pull-up transistor configuration, and for ports P2, P3, P6 and PC, a CMOS configuration.

Figure 5. P-channel pull-up option

The n-channel open-drain outputs for ports P2 to P6 have a withstand voltage greater than 15 V.

Output Level After Reset Option

The output level of ports P0 and P1 after a CPU reset is user selectable.

Watchdog Timer Option

A watchdog timer is available to prevent program run-away.

PROM SPECIFICATION

Specifying Programs and Options

The user-addressable memory is 0000H to 2007H. Addresses 0000H to 1FFFH are for user programs, and addresses 2000H to 2007H, for option specification. The

option specification is coded using the information shown in the following table.

Note

Ports with CMOS output configuration cannot be used as input ports.

The assembler execute command when specifying programs and options using a Sanyo cross assembler is LC66S.EXE.

PROM Programming

The PROM can be programmed using a special adapter board, W66EP308D/408D for the 42-pin DIP and

W66EP308Q/408Q for the 48-pin QFP as shown in the following figure, and a universal EPROM programmer.

The PROM address range is 0000H to 2007H. Addresses 2008H and above cannot be either programmed or read.

The EPROM programmer should be Intel 27128 compatible with $V_{PP} = 21$ V. The recommended programmers are shown in the following table. Please contact your nearest Sanyo representative if you intend to use an alternative EPROM programmer.

Manufacturer	Model
ADVANTEST	TR4943, R4944A, R4945 or equivalent
Sanyo	EVA850 or EVA800 special-purpose programmers

Note

Intel is a registered trademark of Intel Corporation. ADVANTEST is a registered trademark of ADVANTEST Corporation.

The EPROM programmer adapter incorporates a data security switch. When this switch is ON, data is secure, and when OFF, the data lines are floating and the PROM can be programmed. Note that when the data lines are floating, the EPROM programmer will return an error. This error can be ignored.

APPLICATION NOTES

Reset Timing

The reset signal on \overline{RES} should be held LOW for a minimum of three instruction cycles after the oscillator

has stabilized to ensure correct operation, as shown in the following figure.

After a reset occurs, all I/O ports are reset to open-drain output configuration with floating outputs, except for ports P0 and P1 which both have an output level after reset option. The output configuration of each port is then set using the specified options during the eight instruction cycles after \overline{RES} goes HIGH. Program execution then begins from address 0000H.

The LC66E408/P408 can also be reset while in hold mode ($\overline{HOLD}/P33$ is LOW) as long as hold mode is exited before \overline{RES} goes HIGH again.

values, in the following table. The oscillator stabilization characteristics are shown in figure 7.

Figure 6. Ceramic resonator

Reference Clock

The external circuit for a ceramic resonator is shown in figure 6, and the recommended resonator and component

Ceramic resonator	Capacitance	
	C1	C2
4 MHz Murata CSA-4.00MG	33 pF ±10%	33 pF ±10%
4 MHz Kyocera KBR-4.0MS	33 pF ±10%	33 pF ±10%
4 MHz Murata CST-4.00MG with internal capacitor	N/A	N/A
4 MHz Kyocera KBR-4.0MES with internal capacitor	N/A	N/A

Figure 7. Ceramic resonator stabilization time

The external circuit for an RC oscillator is shown in the following figure.

The external clock input connection is OSC1. The remaining oscillator connection, OSC2, should be left open as shown in the following figure.

The RC oscillator frequency is determined by the external resistor and capacitor and has only been specified for $R_{ext} = 2.2 \text{ k}\Omega$ and $C_{ext} = 100 \text{ pF}$. The frequency for other values of R_{ext} and C_{ext} can be determined from the graph in the following figure.

Preparation Procedure

The preparation procedures shown in the following figure for DIP and QFP packages should always be followed prior to mounting the packages on the substrate.

Note that the QFP package should be heat-soaked for 24 hours at 125 °C immediately prior to mounting.

Screening procedure

The construction of the microcontroller with a blank built-in PROM makes it impossible for Sanyo to completely factory-test it before shipping. To prove reliability of the programmed devices, the screening procedure shown in the following figure should always be followed.

Note that it is not possible to perform a write test on the blank PROM. 100% yield, therefore, cannot be guaranteed.

ORDERING INFORMATION

When ordering identical mask ROM and PROM devices simultaneously, provide an EPROM containing the target memory contents together with separate order forms for each of the mask ROM and PROM versions.

When ordering a PROM device, provide an EPROM containing the target memory contents together with an order form.

When ordering either an LC66404A 4 Kbyte or LC66406A 6 Kbyte mask ROM device, insert a jump

command, or any similar command, to avoid executing an address beyond the range of the target device. In addition, write a 0 into all locations above 2007H.

A comparison of the LC66P408 characteristics with those of the LC6640X mask ROM devices is shown in the following table.

Parameter	Symbol	Condition	LC66P408	LC6640X series	Unit
Recommended supply voltage range	V _{DD}		4.5 to 5.5	4.0 to 6.0	V
Maximum halt-mode supply current	I _{DDHT}	4 MHz ceramic resonator	5.5	3.0	mA
		4 MHz external clock	6.0	3.5	
		RC oscillator	5.5	3.0	
External RC oscillator capacitance	C _{ext}		100	100	pF
External RC oscillator resistance	R _{ext}		2.2	2.7	kΩ
Port output configuration after reset			Open-drain (P0 and P1 also have pull-up)	Specified by user option	

A breakdown of the LC66 series devices, which includes the LC66408 and LC6640X devices, is shown in the following table.

Device	Plns	ROM capacity	RAM capacity	Package type
LC66304A/306A/308A	42	4/6/8 Kbyte ROM	512 bytes	DIP42S or QFP48E
LC66E308	42	8 Kbyte EPROM	512 bytes	DIC42S or QFC48
LC66P308	42	8 Kbyte PROM	512 bytes	DIP42S or QFP48E
LC66404A/406A/408A	42	4/6/8 Kbyte ROM	512 bytes	DIP42S or QFP48E
LC66E408	42	8 Kbyte EPROM	512 bytes	DIC42S or QFC48
LC66P408	42	8 Kbyte PROM	512 bytes	DIP42S or QFP48E
LC66506B/508B/512B/516B	64	6/8/12/16 Kbyte ROM	512 bytes	DIP64S or QFP64A
LC66E516	64	16 Kbyte EPROM	512 bytes	DIC64S or QFC64
LC66P516	64	16 Kbyte PROM	512 bytes	DIP64S or QFP64E
