LC7233N

SANYO

Single-chip PLL and Microcontroller with LCD Driver

Preliminary

OVERVIEW

The LC7233N is a single-chip microcontroller that incorporates a 0.5 to 150 MHz phase-locked loop (PLL) and a liquid-crystal display (LCD) driver, making it ideal for digital tuners. It has a large number of input/output ports and a frequency measurement circuit.

The LC7233N features on-chip RAM and ROM, a programmable high-speed divider, a 6-bit analog-to-digital converter and a low-voltage detection reset circuit.

The LC7233N operates from a 5 V supply and is available in 64-pin OIPs.

FEATURES

- 0.5 to 150 MHz phase-locked loop
- LCD driver
- 6-bit analog-to-digital converter
- Two 8-bit PWM digital-to-analog converters
- Two 4-bit input ports
- Two 4-bit input/output ports
- 6-bit keypad matrix scan output port
- 2-bit open-drain high-voltage output port
- 23 mask-selectable output drivers
- 20-bit universal counter
- 4096 \times 16-bit program ROM (001H to FFFH user-addressable memory)
- 256 \times 4-bit data RAM
- Low-voltage detection reset circuit
- Programmable high-speed divider
- Single-word instructions
- Four-level stack
- PLL-unlocked flip-flop
- Timer flip-flop
- External interrupt
- Programmable watchdog interrupt address
- Standby mode
- CPU operates down to 3.5 V and retains data down to 1.3 V.
- 5 V supply
- 64-pin OIP

BLOCK DIAGRAM

PIN DESCRIPTION

Number	Name	Equivalent circuit	Description
1	XIN		Crystal oscillator connections
64	XOUT		
2	TEST2		Test pins
63	TEST1		
3	PG3/ $\overline{\text{INT}}$		Multiplexed input port G bit and interrupt request input
4 to 6	PG2 to PG0		Input port G
7, 8	PH1, PH0		Output port H
9 to 12	PF3 to PF0		Input/output port F
13 to 16	PE3 to PE0		Input/output port E
17, 18	PC1, PC0		Output port C
19 to 22	PB3 to PB0		Output port B

Number	Name	Equivalent circuit	Description
23 to 26	PA3 to PA0		Input port A
27 to 49	S23 to S1		LCD segment outputs
50, 51	COM2, COM1		LCD common driver outputs
52	$\overline{\text{HOLD}}$		Hold-mode control input
55	$\overline{\text{SNS}}$		Power-fail detect
53	ADI		A/D converter input
54	HCTR		Universal counter input
56	VDD		5 V supply

Number	Name	Equivalent circuit	Description
57	FMIN		FM VCO input
58	AMIN		AM VCO input
59	VSS		Ground
60	EO		Phase comparator output
61	AIN		Analog input
62	AOUT		Analog output

SPECIFICATIONS

Absolute Maximum Ratings

Parameter	Symbol	Rating	Unit
Supply voltage range	V_{DD}	-0.3 to 6.5	V
Port G, $\overline{\text{HOLD}}$, ADI and $\overline{\text{SNS}}$ input voltage range	V_{I1}	-0.3 to 13.0	V
Input voltage range (other inputs)	V_{I2}	-0.3 to $V_{DD} + 0.3$	V
Port H and AOUT output voltage range	V_{O1}	-0.3 to 15.0	V
Output voltage range (all other outputs)	V_{O2}	-0.3 to $V_{DD} + 0.3$	V
Port H output current range	I_{O1}	0 to 5	mA
Ports E and F output current range	I_{O2}	0 to 3	mA
Ports B and C output current range	I_{O3}	0 to 1	mA
AOUT output current range	I_{O4}	0 to 2	mA
Power dissipation	P_D	400	mW
Operating temperature range	T_{opr}	-40 to 85	°C
Storage temperature range	T_{stg}	-45 to 125	°C

Recommended Operating Conditions

 $T_a = 25\text{ }^{\circ}\text{C}$

Parameter	Symbol	Rating	Unit
Supply voltage	V_{DD}	5	V
Supply voltage range (PLL and CPU)	V_{DD1}	4.5 to 5.5	V
Supply voltage range (CPU)	V_{DD2}	3.5 to 5.5	V
Supply voltage range for data retention	V_{DD3}	1.3 to 5.5	V

Electrical Characteristics

 $V_{DD} = 3.5$ to 5.5 V, $T_a = -40$ to $85\text{ }^{\circ}\text{C}$ unless otherwise noted

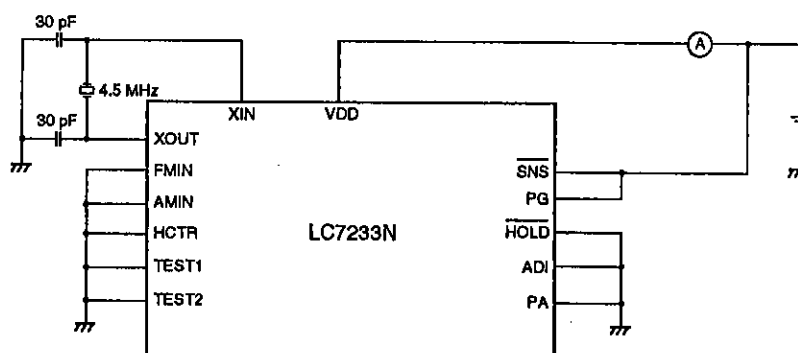

Parameter	Symbol	Condition	Rating			Unit
			min	typ	max

Port A pull-down resistance	R_{PD}	$V_{DD} = 5\text{ V}$	75	100	200	k Ω

Measurement Circuits

Hold mode

Notes

1. Ports E and F are selected as output ports.
2. Ports A to H, S1 to S23, COM1 and COM2 are open.

Standby mode

Note

Ports A to H, S1 to S23, COM1 and COM2 are open.

FUNCTIONAL DESCRIPTION

LCD Driver

The LC7233N can drive LCD segments. The LCP and LCD instructions transfer data to the LCD outputs. The LCD instruction transfers data directly to the LCD outputs. The LCP instruction converts data to 7-segment format before transfer to the outputs.

S1 to S23 are the driver outputs. The LCD frame rate is 100 Hz with a 50% duty cycle. After reset or power-up, a blank signal is present on all outputs. In standby mode, all outputs are LOW. They can be used as general-purpose outputs if the appropriate mask option is selected.

COM1 and COM2 are the LCD common driver outputs. Output drive is 50% duty with 50% bias. Upon reset or after power-up, the normal drive signals are present on these outputs. In standby mode, all outputs are LOW.

Frequency Counter

Frequency measurement is performed at the HCTR input by the 20-bit universal counter. The input frequency range is 0.4 to 12 MHz, which is used for measuring AM and FM IF frequencies. Capacitive coupling should be used.

Phase-locked Loop

The FMIN or AMIN input signal is divided down by a programmable divider, and then compared with the crystal frequency, which is also divided down using 14 selectable ratios. The phase difference between the two signals is measured using a phase detector and output on EO.

FMIN is the input pin for the FM VCO input signal. The input frequency range is 10 to 130 MHz. Capacitive coupling should be used.

AMIN is the AM VCO input. The bandwidth is adjustable in two ranges by using the PLL instruction—HIGH

(2 to 40 MHz) for the SW band, and LOW (0.5 to 10 MHz), for the LW and MW bands. Capacitive coupling should be used.

Input/Output Ports

Port A

This input port has a low switching threshold, which is used for keypad matrix inputs. Pull-down resistors for all pins are available as a mask option. Note that either all or none of the pins should have pull-down resistors. In standby mode, inputs are ignored.

Ports B and C

These output ports have unbalanced CMOS outputs which are used as keypad matrix scan outputs. Upon reset, outputs are set LOW, and in standby mode, outputs are high impedance. The outputs can be short-circuited.

Port E

The transfer direction of this input/output port is selected automatically under software control. When an input instruction (IN, TPT, or TPF) is executed, port E is configured for input operation, and an output instruction (OUT, SPB or RPB), for output operation. Upon reset, all pins become inputs. In standby mode, the output drivers are high impedance and the input signals are ignored. All bits should either be inputs or outputs.

Port F

The transfer direction of this input/output port is selected by the FPC instruction. Each pin of this port can be set independently to be an input or output. Upon

reset, all pins become inputs. In standby mode, the output drivers are high impedance and the input signals are ignored.

Port G

PG0 to PG2 are inputs only. PG3/ $\overline{\text{INT}}$ can be used as a standard input or as the interrupt request input. In standby mode, inputs are ignored.

Port H

These output ports are high-voltage, n-channel open-drain drivers, which are used for switching power supplies. Upon reset and in standby mode, outputs are high impedance. Port H can also be configured as the output of DAC1 and DAC2.

A/D Converter

The A/D converter is a 6-bit successive approximation type. The conversion cycle time is 1.28 ms. Full-scale output data is 3FH for an input of $(63/96) \times V_{DD}$.

Power-fail Detection

When connected to the supply, $\overline{\text{SNS}}$ is used as a power-fail detector. $\overline{\text{SNS}}$ can also be used as a standard input port.

INSTRUCTION SET

ADDR	Program memory address [12 bits]
b	Borrow
B	Bank number [2 bits]
C	Carry
DH	Data memory address high-order bits (row address) [2 bits]
DL	Data memory address low-order bits (column address) [4 bits]
I	Immediate data [4 bits]
M	Data memory address
N	Bit position [4 bits]
Pn	Port number [4 bits]
r	General register (Bank 0 addresses 00H to 0FH)
Rn	Register number [4 bits]
()	Contents of register or memory
()n	Contents of bit N of register or memory

Crystal Oscillator

The master crystal oscillator, which has a feedback resistor on-chip, requires only the connection of a 4.5 MHz crystal.

Low-power Modes

Hold mode

When the hold-mode control pin, $\overline{\text{HOLD}}$, is driven LOW and the HOLDEN (hold enable) flip-flop has previously been set by an SS instruction, the LC7233N enters hold mode.

$\overline{\text{HOLD}}$ has a high-voltage input ($V_{IH}(\text{max}) = 8.0 \text{ V}$) which can be connected directly to the power supply.

Standby mode

When the LC7233N is in hold mode and $\overline{\text{HOLD}}$ is LOW, standby mode can be set by the CKSTP instruction.

Test Pins

Two device test pins are provided—TEST1 and TEST2. These should either be tied to V_{SS} or left open.

MVSR	M1	M2	Move M1 to M2.	1	0	0	1	0	0	DH	DH	DH	DH	DL1	DL1	DL2	DL2	$[DH, DL1] \leftarrow [DH, DL2]$	Moves the contents of memory location 2 to memory location 1.			
MM	M	1	Move 1 to M.	1	0	0	1	0	1	DH	DH	DH	DH	DL	DL	DL	1	$M \leftarrow 1$	Moves the immediate data to M.			
PLL	M	r	Load M to PLL registers.	1	0	0	1	1	0	DH	DH	DH	DH	DL	DL	DL	Rn	$PLLr \leftarrow (M)$	Moves the contents of M to the PLL registers.			
Bit test																						
TMT	M	N	Test bits of M and skip if true.	1	0	1	0	0	1	DH	DH	DH	DH	DL	DL	DL	N	Skip if $M(N) = \text{all } 1$	Tests the bits of memory location M specified by N. Skips if all bits are logic 1.	All bits specified = 1		
TMF	M	N	Test bits of M and skip if false.	1	0	1	0	1	1	DH	DH	DH	DH	DL	DL	DL	N	Skip if $M(N) = \text{all } 0$	Tests the bits of memory location M specified by N. Skips if all bits are logic 0.	All bits specified = 0		

Mnemonic	Operand		Operation	Instruction format																Notation	Description	Skip condition
	1st	2nd		D15	D14	D13	D12	D11	D10	D9	D8	D7	D6	D5	D4	D3	D2	D1	D0			
Jump and subroutine																						
JMP	ADDR		Jump to address.	1	0	1	1	ADDR (12 bits)											PC ← ADDR	Jumps to the address specified by ADDR.		
CAL	ADDR		Call subroutine.	1	1	0	0	ADDR (12 bits)											Stack ← (PC) + 1, PC ← ADDR	Jumps to the subroutine specified by ADDR.		
RT			Return from subroutine.	1	1	0	1	0	1	0	0	0	0	0	0	0	0	0	0	PC ← stack	Returns from a subroutine.	
RTI			Return from interrupt.	1	1	0	1	0	1	0	1	0	0	0	0	0	0	0	0	PC ← stack	Returns from an interrupt.	
Flag test																						
TTM	N		Test timer flip-flop.	1	1	0	1	0	1	1	0	0	0	0	0	0	0	N		Skip if timer F/F = 0	Tests the timer flip-flop and skips if zero.	Timer F/F = 0
TUL	N		Test PLL flip-flop.	1	1	0	1	0	1	1	1	0	0	0	0	0	0	N		Skip if PLL F/F = 0	Tests the PLL-unlocked flip-flop and skips if zero.	PLL F/F = 0
Status register test and set																						
SS	N		Set status register bits.	1	1	0	1	1	1	0	0	0	0	0	0	0	0	N		(Status register 1) N ← 1	Sets the bits of status register 1 specified by N.	
RS	N		Reset status register bits.	1	1	0	1	1	1	0	1	0	0	0	0	0	0	N		(Status register 1) N ← 0	Resets the bits of status register 1 specified by N.	
TST	N		Test status register bits and skip if true.	1	1	0	1	1	1	1	0	0	0	0	0	0	0	N		Skip if (status register 2) N = all 1	Tests the bits of status register 2 specified by N. Skips if all bits are 1.	All bits specified = 1
TSF	N		Test status register bits and skip if false.	1	1	0	1	1	1	1	1	0	0	0	0	0	0	N		Skip if (status register 2) N = all 0	Tests the bits of status register 2 specified by N. Skips if all bits are 0.	All bits specified = 0
Bank select																						
BANK	B		Select bank.	1	1	0	1	0	0	0	B	0	0	0	0	0	0	0	0	BANK ← B	Selects one of four memory banks.	
Input/output																						
LCD	M	1	Move data to LCD segments.	1	1	1	0	0	0		DH		DL							LCD (DIGIT) ← 1	Loads the immediate data directly to the LCD driver.	
LCP	M	1	Move 7-segment data to LCD.	1	1	1	0	0	1		DH		DL							LCD (DIGIT) ← PLA ← 1	Converts the immediate data to 7-segment format using a PLA then transfers it to the LCD driver.	
IN	M	P _n	Move port data to M.	1	1	1	0	1	0		DH		DL				P			M ← (port P _n)	Moves the data from input port P _n to M.	
OUT	M	P _n	Move data to port.	1	1	1	0	1	1		DH		DL				P			(Port P _n) ← M	Moves the contents of memory location M to port P _n .	
SPB	P _n	N	Set port bits.	1	1	1	1	0	0	0	0		P				N			(Port P _n) N ← 1	Sets the bits of port P _n specified by N to logic 1.	
RPB	P _n	N	Reset port bits.	1	1	1	1	0	1	0	1		P				N			(Port P _n) N ← 0	Sets the bits of port P _n specified by N to logic 0.	

Mnemonic	Operand		Operation	Instruction format																Notation	Description	Skip condition
	1st	2nd		D15	D14	D13	D12	D11	D10	D9	D8	D7	D6	D5	D4	D3	D2	D1	D0			
TFT	P _n	N	Test bit of port and skip if true.	1	1	1	1	1	0	1	0			P				N		Skip if (port (P _n)) N = all 1	Tests the bits of port P _n specified by N. Skips if all bits are logic 1.	All bits specified = 1
TPF	P _n	N	Test bit of port and skip if false.	1	1	1	1	1	1	1	1			P				N		Skip if (port (P _n)) N = all 0	Tests the bits of port P _n specified by N. Skips if all bits are logic 0.	All bits specified = 0
Universal counter																						
UCS	1		Set UCCW1.	0	0	0	0	0	0	0	1	0	0	0	0	0		1		UCCW1 ← 1	Sets the universal counter flag 1.	
UCC	1		Set UCCW2.	0	0	0	0	0	0	1	1	0	0	0	0	0		1		UCCW2 ← 1	Sets the universal counter flag 2.	
Miscellaneous																						
FPC	N		Port F direction control	0	0	0	1	0	0	0	0	0	0	0	0	0		N		FPC latch ← N	Defines the direction of individual pins of port F. If a bit in the port F direction register is set by FPC, the corresponding pin of port F becomes an output.	
CKSTP			Stop clock.	0	0	0	1	0	0	0	1	0	0	0	0	0	0	0	0	Skip clock if HOLD = 0	Stops the processor clock if HOLD = 0.	
NOP			No operation	0	0	0	0	0	0	0	0	0	0	0	0	0				No operation		

MASK OPTIONS

Parameter	Options
Watchdog timer (WDT)	Yes
	No
Pull-down resistors on port A (the keypad matrix input port)	Yes
	No
Instruction cycle time	2.67 μ s

Parameter	Options
Instruction cycle time	13.33 μ s
	40.00 μ s
S1 to S23 configuration	LCD driver output port
	General-purpose output port

DEVELOPMENT SYSTEM

The LC7233N development environment is shown in the following figure. It uses an LC72EV32 evaluation chip mounted on a TB-72EV32 target board and a

multifunctional emulator (RE32), which is controlled by a personal computer, to provide full debugging facilities.

- No products described or contained herein are intended for use in surgical implants, life-support systems, aerospace equipment, nuclear power control systems, vehicles, disaster/crime-prevention equipment and the like, the failure of which may directly or indirectly cause injury, death or property loss.
- Anyone purchasing any products described or contained herein for an above-mentioned use shall:
 - ① Accept full responsibility and indemnify and defend SANYO ELECTRIC CO., LTD., its affiliates, subsidiaries and distributors and all their officers and employees, jointly and severally, against any and all claims and litigation and all damages, cost and expenses associated with such use.
 - ② Not impose any responsibility for any fault or negligence which may be cited in any such claim or litigation on SANYO ELECTRIC CO., LTD., its affiliates, subsidiaries and distributors or any of their officers and employees jointly or severally.
- Information (including circuit diagrams and circuit parameters) herein is for example only; it is not guaranteed for volume production. SANYO believes information herein is accurate and reliable, but no guarantees are made or implied regarding its use or any infringements of intellectual property rights or other rights of third parties.
