

**LC86P4164****8-bit Single Chip Microcontroller****Overview**

The LC86P4164 is a CMOS 8-bit single chip microcontroller with one-time PROM for the LC864100 series. This microcontroller has the function and the pin description of the LC864100 series mask ROM version, and the 64K-byte PROM. It is suitable for developing programs.

Package Dimensions

unit : mm

3128-DIP52S**Features**

- (1) Option switching by PROM data
The option function of the LC864100 series can be specified by the PROM data.
The functions of the trial pieces can be evaluated using the mass production board.
- (2) Internal PROM capacity : 65512 bytes (for program data)
: 8192 × 12 bits (for character data)
- (3) Internal RAM capacity : 384 bytes

Mask ROM version	PROM capacity	RAM capacity
LC864164	65512 bytes	384 bytes
LC864156	57344 bytes	384 bytes
LC864148	49152 bytes	384 bytes
LC864140	40960 bytes	384 bytes
LC864132	32768 bytes	384 bytes
LC864124	24576 bytes	384 bytes
LC864120	20480 bytes	384 bytes
LC864116	16384 bytes	384 bytes
LC864112	12288 bytes	384 bytes

- (4) Operating supply voltage : 4.5 V to 5.5 V
- (5) Instruction cycle time : 1.0 μs to 30 μs
- (6) Operating temperature : -30°C to +70°C
- (7) The pin and the package compatible with the LC864100 series mask ROM devices
- (8) Applicable mask ROM version : LC864164/LC864156/LC864148/LC864140/LC864132
LC864124/LC864120/LC864116/LC864112
- (9) Factory shipment : DIP52S

SANYO Electric Co.,Ltd. Semiconductor Bussiness Headquarters

TOKYO OFFICE Tokyo Bldg., 1-10, 1 Chome, Ueno, Taito-ku, TOKYO, 110-8534 JAPAN

Usage Notes

The LC86P4164 is provided for the first release and small shipping of the LC864100 series.
At using, take notice of the followings.

- (1) Differences between the LC86P4164 and the LC864100 series

Item	LC86P4164	LC864164/56/48/40/32/24/20/16/12
Operation after reset releasing	The option is specified by degrees until 3 ms after going to a 'H' level to the reset terminal. The program is executed from 00H of the program counter.	The program is executed from 00H of the program counter immediately after going to a 'H' level to the reset terminal.
Operating supply voltage range (V _{DD})	4.5 V to 6.0 V	4.5 V to 6.0 V
Operating temperature range (Topr)	-30 to +70°C	-30 to +70°C
Power dissipation	Refer to 'electrical characteristics' on the semiconductor news.	

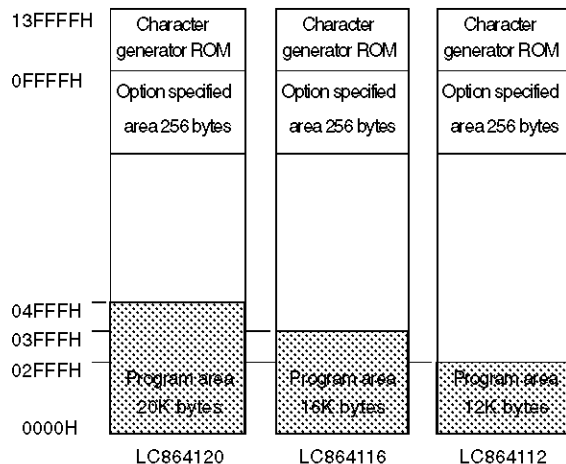

The LC86P4164 uses the program memory area of 256 bytes from FF00H to FFFFH to select the options.

- (2) Option

The option data is created by the option specified program "SU86K.EXE". The created option data is linked to the program area by the linkage loader "L86K.EXE".

- (3) ROM space

The LC86P4164 and LC864100 series use the program memory area of 256 bytes from FF00H to FFFFH to select options.
The program memory has 65280 bytes from 0000H to FEFH.

How to use

(1) Create a programming data for LC86P4164

Programming data for EPROM of the LC86P4164 is required.

Debugged evaluation file (EVA file) must be converted to an INTEL-HEX formatted file (HEX file) with file converter program, SU86K.EXE. The HEX file is used as the programming data for the LC86P4164.

(2) How to program for the PROM

The LC86P4164 can be programmed by the EPROM programmer with attachment; W86EP4164D.

- Recommended EPROM programmer

Manufacturer	EPROM programmer
Advantest	R4945, R4944
Andou	AF-9704
AVAL	PKW-1100, PKW-3000
Minato electronics	MODEL 1890A

- "27010 (Vpp=12.5V) Intel high speed programming" mode should be adopted. The address must be set to "0 to 13FFFH" and a jumper (DASEC) must be set to 'OFF' at programming.

(3) How to use the data security function

"Data security" is the function to disable the EPROM data from being read out.

The following is the procedure in order to execute the data security function.

- Set 'ON' the jumper of attachment.
- Program again. Then the EPROM programmer displays an error. The error means that the data security functions normally. It is not a trouble of the EPROM programmer or the LSI.

Notes

- Data security is not executed when the data of all address have 'FF' at the procedure 2 above.
- Data security cannot be executed by programming the sequential operation "BLANK=>PROGRAM=>VERIFY" at procedure 2 above.
- Set the jumper to 'OFF' after executing the data security.

*3 Power for programming

*4 Memory select input/output for data security

*5 Output Enable input

*6 Chip Enable input

• All of port options except the 4-bit unit pull-up resistor option of Port 0 can be specified in a bit unit.

• Port status during reset

Terminal	I/O	Pull-up resistor status at selecting pull-up option
Port 0	Input	Pull-up resistor OFF, ON after reset release
Port 1	Input	Programmable pull-up resistor OFF
Port 7	Input	Fixed pull-up resistor provided

* AVDD and AVSS are the power supply terminals for built-in analog circuit while DVDD and DVSS are the power supply terminals for built-in digital circuit. Connect them like the following figure to reduce the mutual noise influence.

Specifications

1. Absolute Maximum Ratings at Ta = 25°C, VSS = 0 V

Parameter		Symbol	Pins	Conditions	V _{DD} [V]	Ratings			Unit
						min	typ	max	
Supply voltage		V _{DDmax}	DVDD, AVDD	DVDD = AVDD		−0.3		+7.0	V
Input voltage		V _I (1)	• P71, 72, 73 • Port 9 • $\overline{\text{RES}}, \overline{\text{HS}}, \overline{\text{VS}}, \text{CVIN}$			−0.3		V _{DD} +0.3

LC86P4164

Parameter	Symbol	Pins	Conditions	V _{DD} [V]	Ratings			Unit
					min	typ	max	
Oscillation frequency range (Note 1)	FmCF	CF1, CF2	12MHz (ceramic resonator oscillation) Refer to Figure 1.	4.5 to 5.5	11.76	12	12.24	MHz
	FmLC	LC1, LC2	14.11MHz (LC oscillation) Refer to Figure 2.	4.5 to 5.5		14.11		
	FmRC		RC oscillation	4.5 to 5.5	0.4	0.8	2.0	
Oscillation stable time period (Note 2)	tmsCF	CF1, CF2	12 MHz (ceramic resonator oscillation) Refer to Figure 3.	4.5 to 5.5		0.02	0.2	ms

(Note 1) The oscillation constant is shown on Table 1 and Table 2.

(Note 2) The oscillation stable time period means the time to oscillate stably after the following conditions.

1. Supplying voltage.
 2. Release the HOLD mode.
 3. Release stopping the main-clock oscillation.
- Refer to Figure 3 for details.

3. Electrical Characteristics at Ta = -30°C to +70°C, V_{SS} = 0 V

	I _{DDHALT} (2)	DVDD, AVDD	<ul style="list-style-type: none"> HALT mode FmCF = 0 MHz (oscillation stops) FmLC = 0 Hz (oscillation stops) System clock : Internal RC 	4.5 to 5.5		400	800	μA
Current dissipation in HOLD mode (Note 4)	I _{DDHOLD}	DVDD, AVDD	<ul style="list-style-type: none"> HOLD mode All oscillation stops. 	4.5 to 5.5		0.05	20	μA

(Note 4) The currents of the output transistors and the pull-up MOS transistors are ignored.

LC86P4164

Oscillation type	Manufacturer	Oscillator	C1	C2
12 MHz ceramic resonator oscillation	Murata	CSA12.0MTZ	33 pF	33 pF
		CST12.0MTW	on chip	
	Kyocera	KBR-12.0M	47 pF	47 pF

* Both C1 and C2 must use an K rank ($\pm 10\%$) and an SL characteristics.

Table 1. Ceramic Resonator Oscillation Guaranteed Constant (main-clock)

Oscillation type	L	C3	C4
14.11 MHz LC oscillation	5.6 μH	27 pF	30 pF (Trimmer)
	4.7 $\mu\text{H} \pm 10\%$ (Variable)	27 pF	27 pF

* See Figure 11,12.

Table 2. LC Oscillation Guaranteed Constant (OSD clock)

- (Notes)
- Since the circuit pattern affects the oscillation frequency, place the oscillation-related parts as close to the oscillation pins as possible with the shortest possible pattern length.
 - If you use other oscillators than those shown above, we provide no guarantee for the characteristics.
 - Adjust the voltage of monitor point in Figure 10 to $1/2V_{DD} \pm 10\%$ by the LC oscillation constant 'L' or 'C' to lock the PLL circuit.

Requirements Prior to Mounting

Notes on Handling

- The construction of one-time microcontrollers in which the PROM is not programmed precludes Sanyo from fully testing them before they are shipped. The screening procedure described below is recommended in order to attain higher reliability after programming the PROM.
- The nature of one-time microcontrollers in which the PROM is not programmed precludes us from fully testing them by writing all of the bits. Therefore, it is not possible for us to guarantee a write yield of 100%.
- Storage in moisture-proof packaging (unopened)
While they are still in the moisture-proof packaging, these devices should be stored at a temperature of 30°C and a humidity of no more than 70%.
- After opening the moisture-proof packaging
These devices should be mounted and soldered as soon as possible after the moisture-proof packaging is opened. Once the moisture-proof packaging is opened, the devices should be stored at a temperature of 30°C and a humidity of no more than 70% for no more than 96 hours.

- a. In the case of models that are programmed by the user (models that are shipped with the PROM not programmed)

- b. Requirements prior to mounting for models that are programmed by Sanyo (models that are shipped with the PROM already programmed)

- No products described or contained herein are intended for use in surgical implants, life-support systems, aerospace equipment, nuclear power control systems, vehicles, disaster/crime-prevention equipment and the like, the failure of which may directly or indirectly cause injury, death or property loss.
- Anyone purchasing any products described or contained herein for an above-mentioned use shall:
 - ① Accept full responsibility and indemnify and defend SANYO ELECTRIC CO., LTD., its affiliates, subsidiaries and distributors and all their officers and employees, jointly and severally, against any and all claims and litigation and all damages, cost and expenses associated with such use
 - ② Not impose any responsibility for any fault or negligence which may be cited in any such claim or litigation on SANYO ELECTRIC CO., LTD., its affiliates, subsidiaries and distributors or any of their officers and employees jointly or severally.
- Information (including circuit diagrams and circuit parameters) herein is for example only; it is not guaranteed for volume production. SANYO believes information herein is accurate and reliable, but no guarantees are made or implied regarding its use or any infringements of intellectual property rights or other rights of third parties.
