

LC86P6032

8-Bit Single Chip Microcontroller with One-Time PROM

Overview

The LC86P6032 microcontroller, a new addition to the LC866000 series, is a 8-bit single chip CMOS microcontroller with one-time PROM. This microcontroller has the same function and pin assignment as for the LC866000 series mask ROM version, and a 32K-byte PROM.

Features

- (1) Option switching using PROM data

The optional functions of the LC866000 series can be specified using PROM data.

The functions of the trial products can be evaluated using a mass production board.

- (2) Internal one-time PROM capacity : 32768 bytes
(3) Internal RAM capacity : 512 bytes

Mask ROM version	PROM capacity	RAM capacity
LC866032	32512 bytes	512 bytes
LC866028	28672 bytes	512 bytes
LC866024	24576 bytes	512 bytes
LC866020	20480 bytes	384 bytes
LC866016	16384 bytes	384 bytes
LC866012	12288 bytes	384 bytes
LC866008	8192 bytes	384 bytes

- (4) Operating supply voltage : 4.5V to 6.0V
(5) Instruction cycle time : 0.98μs to 400μs
(6) Operating temperature range : -30°C to +70°C
(7) Pin and package compatible with the mask ROM version
(8) Applicable mask ROM version : LC866032/LC866028/LC866024/LC866020/LC866016/LC866012
/LC866008
(9) Factory shipment : DIP64S
: QFP64E

Programming service

We offer various services at nominal charges. These include ROM writing, ROM reading, and package stamping and screening. Contact our local representatives for further information.

■ Any and all SANYO products described or contained herein do not have specifications that can handle applications that require extremely high levels of reliability, such as life-support systems, aircraft's control systems, or other applications whose failure can be reasonably expected to result in serious physical and/or material damage. Consult with your SANYO representative nearest you before using any SANYO products described or contained herein in such applications.

■ SANYO assumes no responsibility for equipment failures that result from using products at values that exceed, even momentarily, rated values (such as maximum ratings, operating condition ranges, or other parameters) listed in products specifications of any and all SANYO products described or contained herein.

Notice for use

When using, please take note of the following.

(1) Differences between the LC86P6032 and the LC866000 series

Item	LC86P6032	LC866032/28/24/20/16/12/08
Port status at reset	Please refer to "Port status at reset" on the next page.	
Operation after releasing reset	The option is specified by degrees within 3ms after applying a 'H' level to the reset pin. The program located at 00H is executed.	The program located at 00H is executed immediately after applying a 'H' level to the reset pin.
Output form of segment •S0/T0 to S6/T6 •S7/T7 to S15/T15 •S16 to S23 •S24 to S29	Pulldown resistor Not provided Provided(fixed) Provided(fixed) Not provided	Pulldown resistor : Provided/Not provided Specified by the option Provided(fixed) Specified by the option Specified by the option
Operating supply voltage range (VDD)	4.5V to 6.0V	2.5V to 6.0V
Power dissipation	Refer to "electrical characteristics" on the semiconductor news.	

LC86P6032 uses 256 bytes that is addressed on 7F00H to 7FFFH in the program memory as the option configuration data area. This option configuration cannot execute all options which LC866000 series have. Next tables show the options that correspond and not correspond to LC86P6032.

• LC86P6032 Options

Option	Pins, Circuits	Option Settings
Configuration of input/output ports	Port 0 (Can be specified for each bit.)	1. Input : No pull-up MOS transistor Output : N-channel open drain 2. Input : Pull-up MOS transistor Output : CMOS
	Port 1 (Can be specified for each bit.)	1. Input : Programmable pull-up MOS transistor Output : N-channel open drain 2. Input : Programmable Pull-up MOS transistor Output : CMOS
Port 7 pull-up MOS transistor	Port 7 (Can be specified for each bit.)	1. Pull-up MOS transistor not provided. 2. Pull-up MOS transistor provided.

• A kind of option not corresponding LC86P6032

Option	Pins, Circuits	LC86P6032	LC866032/28/24/20/16/12/08
Pull-down resistor of high voltage withstand output terminal	•S0/T0 to S6/T6 •S16 to S23 •S24 to S29 (specified in a bit)	Not provided Provided(fixed) Not provided	Specified by the option Specified by the option Specified by the option

The port operation related to the option is different at reset. Please refer to the next table.

• Port configuration at reset

Pin	Option settings	LC86P6032	LC866032/28/24/20/16/12/08
P0	Input : No pull-up MOS transistor Output : N-channel open drain	(Same as for the mask version)	Input mode without pull-up MOS transistor (Output is OFF)
	Input : Pull-up MOS transistor Output : CMOS	Input mode •The Pull-up MOS transistor is not present during reset or several hundred microseconds after releasing reset. After that, the pull-up MOS transistor is present. (Output is OFF)	Input mode with pull-up MOS transistor (Output is OFF)
P1	Input : Programmable pull-up MOS transistor Output : N-channel open drain	(Same as for the mask version)	Input mode without pull-up MOS transistor (Output is OFF)
	Input : Programmable pull-up MOS transistor Output : CMOS	(Same as for the mask version)	Input mode without pull-up MOS transistor (Output is OFF)
P7	Pull-up MOS transistor not provided	(Same as for the mask version)	Input mode without pull-up MOS transistor
	Pull-up MOS transistor provided	Input mode •The Pull-up MOS transistor is not present during reset or several hundred microseconds after releasing reset. After that, the pull-up MOS transistor is present.	Input mode with pull-up MOS transistor

(2) Option

The option data is created by the option specified program “SU866000.EXE”. The created option data is linked to the program area by the linkage loader “L866000.EXE”.

(3) ROM space

LC86P6032 and LC866000 series use 256 bytes that is addressed on 07F00H to 07FFFH in the program memory as the option specified data area. These program memory capacity are 32512 bytes that is addressed on 0000H to 7EFFFH.

(4) Ordering information

1. When ordering identical mask ROM and PROM devices simultaneously.

Provide an EPROM containing the target memory contents together with separate order forms for each of the mask ROM and PROM versions.

2. When ordering a PROM device.

Provide an EPROM containing the target memory contents together with an order form.

How to use

(1) Specification of option

LC86P6032 is programmed after specifying option data. The option is specified by the SU866000.EXE. The specified option file and the file created by our macro assembler (M866000.EXE) are linked by our linker (L866000.EXE) which creates HEX file, then the option code is put in the option specified area (07F00H to 07FFFH) of its HEX file.

(2) How to program for the EPROM

The LC86P6032 can be programmed by an EPROM programmer with attachments W86EP6032D and W86EP6032Q.

- Recommended EPROM programmer

Supplier	EPROM programmer
Advantest	R4945, R4944, R4943
Andou	AF-9704
AVAL	PKW-1100, PKW-3000
Minato electronics	MODEL 1890A

- “27512 (Vpp=12.5V) Intel high-speed programming” mode available. The address must be set to “0000H to 07FFFH” and the jumper (DASEC) must be set ‘OFF’ at programming.

(3) How to use the data security function

“Data security” is a function to prevent EPROM data from being read.

Instructions on using the data security function :

1. Set the jumper of attachment “ON”.
2. Attempt to program the EPROM. The EPROM programmer will display an error. The error indication is a result of normal activity of the data security feature. This is not a problem with the EPROM programmer chip.

(Notes)

- The data security function is not carried out when the data of all addresses contain “FF” at step 2 above.
- Data security cannot be executed when the sequential operation “BLANK=>PROGRAM=>VERIFY” is used at step 2 above.
- Set the jumper “OFF” after execution of data security.

Notes

- The QFP packages should be heat-soaked for 24 hours at 125°C immediately prior to mounting (This baking is called pre-baking).
- After pre-baking, a controlled environment must be maintained until soldering. The environment must be held at a temperature of 30°C or less and a humidity level of 70% or less. Please solder within 8 hours.

System Block Diagram

Pin Description

Pin Description Table

Pin name	I/O	Function Description					Option		Function in PROM mode
VSS	-	Power supply pin (-)							
VDD	-	Power supply pin (+)							
VP	-	Power supply pin (-) for the VFD output pull-down resist							
VDDVPP	-	Power supply pin (+) *6							Power for programming
PORT0 P00 to P07	I/O	•8-bit Input / output port •Input for port 0 interrupt •Input/output in nibble units •Input for HOLD release					•Pull-up resistor : Present/Not present •Output form : CMOS/N-channel open drain		
PORT1 P10 to P17	I/O	•8-bit input/output port •Data direction can be specified for each bit. •Other pin functions P10 : SIO0 data output P11 : SIO0 data input/bus input/output P12 : SIO0 clock input/output P13 : SIO1 : data output P14 : SIO1 : data input/bus input/output P15 : SIO1 clock input/output P16 : Buzzer output P17 : Timer 1 output (PWM output)					Output form : CMOS/N-channel open drain		Data input/output D0 to D7
PORT7 P70 P71 to P73	I/O I	•4-bit input port •Other pin functions P70 : INT0 input/HOLD release/N-channel Tr. output for watchdog timer P71 : INT1 input/HOLD release P72 : INT2 input/timer 0 event input P73 : INT3 input with noise filter/timer 0 event input •Interrupt received format, vector address					•Pull-up resistor : Present/Not present		Input of PROM control signal •DASEC (*1) • \overline{OE} (*2) • \overline{CE} (*3)
			Rising	Falling	Rising /falling	H level	L level	Vector	
		INT0	Enable	Enable	Disable	Enable	Enable	03H	
		INT1	Enable	Enable	Disable	Enable	Enable	0BH	
		INT2	Enable	Enable	Enable	Disable	Disable	13H	
		INT3	Enable	Enable	Enable	Disable	Disable	1BH	
PORT8 P80 to P83	I	•4-bit input port •Other pin functions AD input port (4 port pins)							
S0/T0 to S6/T6 *7	O	Output for VFD display controller segment/timing in common							
S7/T7 to S15/T15 *8	O	•Output for VFD display controller segment/timing in common •Internal pull-down resistor output							•S14/T14 : TA (*4) •S15/T15 : A14 (*5)
S16 to S23 *9	O	•Output for VFD display controller segment •Internal pull-down resistor output							Address input A13 to A0
S24 to S29 *10	O	•Output for VFD display controller segment							
$\overline{\text{RES}}$	I	Reset pin							

Pin name	I/O	Function Description	Option	Function in PROM mode
TEST1	O	Test pin Should be left open		
XT1	I	Input pin for 32.768kHz crystal oscillation When not used, connect to VDD		
XT2	O	Output pin for 32.768kHz crystal oscillation When not used, should be left open		
CF1	I	Input pin for ceramic resonator oscillation		
CF2	O	Output pin for ceramic resonator oscillation		

• All port options can be specified in bit units.

- *1 Memory select input for data security
- *2 Output enable input
- *3 Chip enable input
- *4 TA → PROM control signal input
- *5 A14 → Address input
- *6 Connect as shown in the following figure to reduce noise into VDD pin.
 - Short-circuit the VDD pin to the VDDVPP pin.

- *7 S0/T0 to S6/T6 : not provided the pull-down resistor
- *8 S7/T7 to S15/T15 : provided the pull-down resistor (fixed)
- *9 S16 to S23 : provided the pull-down resistor (fixed)
- *10 S24 to S29 : not provided the pull-down resistor

Analog input voltage range	VAIN	AN0 to AN3		4.5 to 6.0	VSS		VDD	V
Analog port input current	IAINH		VAIN=VDD	4.5 to 6.0			1	μA
	IAINL		VAIN=VSS	4.5 to 6.0	-1			

(Note 2) Quantizing error (±1/2 LSB) is ignored.

(Note 3) The conversion time is the period from execution of the instruction to start conversion to the completion of shifting the A/D converted value to the register.

7. Current Drain Characteristics at Ta=-30°C to +70°C, VSS=0V

Parameter	Symbol	Pins	Conditions	Ratings				unit
				VDD[V]	min.	typ.	max.	
Current drain during basic operation (Note 4)	IDDOP(1)	VDD	•FmCF=12MHz for Ceramic resonator oscillation •FsXtal=32.768kHz for crystal oscillator •System clock : CF oscillator •Internal RC oscillator stopped	4.5 to 6.0		13	26	mA
	IDDOP(2)		•FmCF=3MHz for Ceramic resonator oscillation •FsXtal=32.768kHz for crystal oscillator •System clock : CF oscillator •Internal RC oscillator stopped	4.5 to 6.0		6.5	14	
	IDDOP(3)		•FmCF=0Hz (when oscillator stops) •FsXtal=32.768kHz for crystal oscillator •System clock : RC oscillator	4.5 to 6.0		4	10	
	IDDOP(4)		•FmCF=0Hz (when oscillator stops) •FsXtal=32.768kHz for crystal oscillator •System clock : crystal oscillator •Internal RC oscillator stopped	4.5 to 6.0		3.5	9	

Continue.

Parameter	Symbol	Pins	Conditions	VDD[V]	Ratings			unit
					min.	typ.	max.	
Current drain at HALT mode (Note 4)	IDDHALT(1)	VDD	•HALT mode •FmCF=12MHz for Ceramic resonator oscillation •FsXtal=32.768kHz for crystal oscillator •System clock : CF oscillator •Internal RC oscillator stopped	4.5 to 6.0		5	10	mA
	IDDHALT(2)		•HALT mode •FmCF=3MHz for Ceramic resonator oscillation •FsXtal=32.768kHz for crystal oscillator •System clock : CF oscillator •Internal RC oscillator stopped	4.5 to 6.0		1.8	4.6	
	IDDHALT(3)		•HALT mode •FmCF=0Hz (when oscillator stops) •FsXtal=32.768kHz crystal oscillator •System clock : RC oscillator	4.5 to 6.0		400	800	μA
	IDDHALT(4)		•HALT mode •FmCF=0Hz (when oscillator stops) •FsXtal=32.768kHz for crystal oscillator •System clock : crystal oscillator •Internal RC oscillator stopped	4.5 to 6.0		20	60	
Current drain at HOLD mode (Note 4)	IDDHOLD(1)	VDD	HOLD mode	4.5 to 6.0		0.05	30	
	IDDHOLD(2)			2.5 to 4.5		0.02	20	

(Note 4) The currents of output transistors and pull-up MOS transistors are ignored.

Table 1. Ceramic resonator oscillation circuit recommended constants (main-clock)

Oscillation type	Supplier	Oscillator	C1	C2
12MHz ceramic resonator oscillation	Murata	CSA12.0MTZ	33pF	33pF
		CSA12.0MT	33pF	33pF
		CST12.0MTW	on chip	
3MHz ceramic resonator oscillation	Kyocera	KBR-12.0M	33pF	33pF
	Murata	CSA3.00MG	33pF	33pF
		CST3.00MGW	on chip	
	Kyocera	KBR-3.0MS	47pF	47pF

* For both C1 and C2, the K rank ($\pm 10\%$) and SL characteristics must be used.

Table 2. Crystal oscillation circuit recommended constants (sub-clock)

Oscillation type	Supplier	Oscillator	C3	C4
32.768kHz crystal oscillation	Daishinku	DT-38(1TA252E00)	18pF	18pF
	Kyocera	KF-38G-13P0200	18pF	18pF

- (Notes)
- Since the circuit pattern affects the oscillation frequency, place the oscillation-related parts as close to the oscillation pins as possible with the shortest possible pattern length.
 - If you use other oscillators herein, we provide no guarantee for the characteristics.

Figure 1 Ceramic resonator oscillation

Figure 2 Crystal oscillation

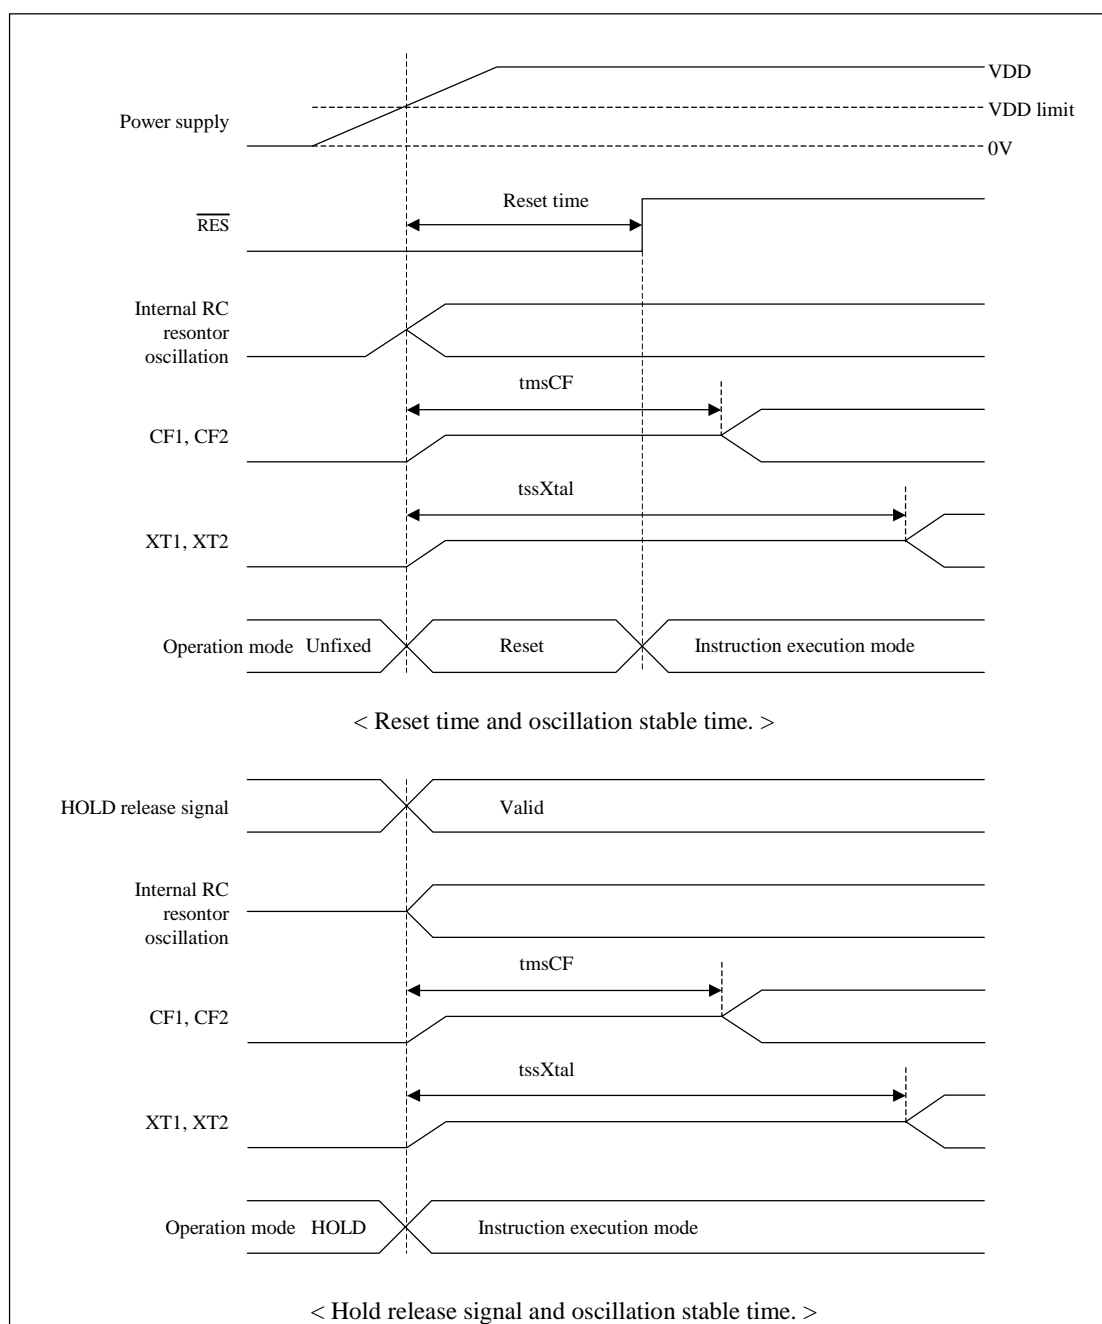

Figure 3 Oscillation stable time

(Note) The values of C_{RES} and R_{RES} should be determined such that reset time is at least $200\mu s$, measured from the moment the power exceeds the VDD lower limit.

Figure 6 Pulse input timing conditions

Notice for use

- The construction of the one-time programmable microcomputer with a blank built-in PROM makes it impossible for SANYO to completely factory-test it before shipping. To probe reliability of the programmed devices, the screening procedure shown in the following figure should always be followed.

- It is not possible to perform a writing test on the blank PROM.. 100% yield, therefore, cannot be guaranteed.

- Should be stored in dry conditions (QFP type only)

The environment must be held at a temperature of 30°C or less and a humidity level of 70% or less.

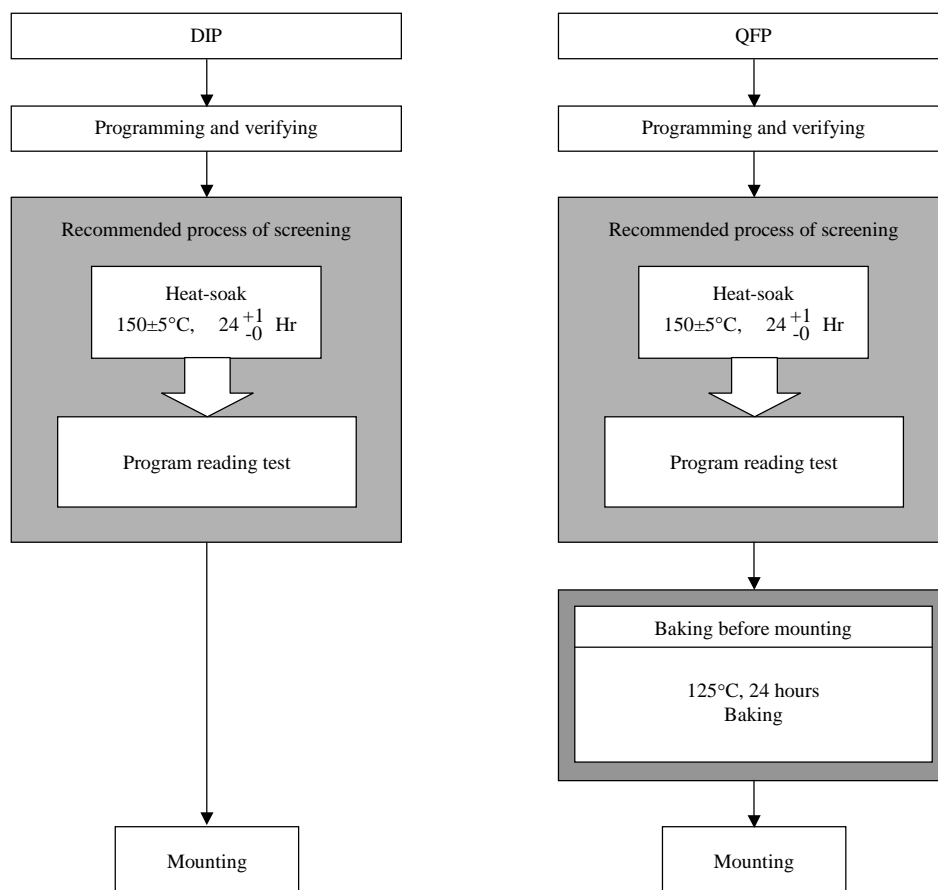

- After opening the packing (QFP type only)

The preparation procedures shown in the following figure should always be followed prior to mounting the packages on the substrate. After opening the packing, a controlled environment must be maintained until soldering. The environment must be held at a temperature of 30°C or less and a humidity level of 70% or less. Please solder within 8 hours.

a. Shipping with a blank PROM (Data to be programmed by customer)

This microcomputer is provided DIP/QFP packages, but the condition before mounting is not same.

Refer to the mounting procedure as follows;

b. Shipping with programmed PROM (Data programmed by Sanyo)

- Specifications of any and all SANYO products described or contained herein stipulate the performance, characteristics, and functions of the described products in the independent state, and are not guarantees of the performance, characteristics, and functions of the described products as mounted in the customer's products or equipment. To verify symptoms and states that cannot be evaluated in an independent device, the customer should always evaluate and test devices mounted in the customer's products or equipment.
- SANYO Electric Co., Ltd. strives to supply high-quality high-reliability products. However, any and all semiconductor products fail with some probability. It is possible that these probabilistic failures could give rise to accidents or events that could endanger human lives, that could give rise to smoke or fire, or that could cause damage to other property. When designing equipment, adopt safety measures so that these kinds of accidents or events cannot occur. Such measures include but are not limited to protective circuits and error prevention circuits for safe design, redundant design, and structural design.
- In the event that any or all SANYO products (including technical data, services) described or contained herein are controlled under any of applicable local export control laws and regulations, such products must not be exported without obtaining the export license from the authorities concerned in accordance with the above law.
- No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopying and recording, or any information storage or retrieval system, or otherwise, without the prior written permission of SANYO Electric Co., Ltd.
- Any and all information described or contained herein are subject to change without notice due to product/technology improvement, etc. When designing equipment, refer to the "Delivery Specification" for the SANYO product that you intend to use.
- Information (including circuit diagrams and circuit parameters) herein is for example only; it is not guaranteed for volume production. SANYO believes information herein is accurate and reliable, but no guarantees are made or implied regarding its use or any infringements of intellectual property rights or other rights of third parties.

This catalog provides information as of September, 2000. Specifications and information herein are subject to change without notice.
