

SANYO**STK6865H**

Thick Film Hybrid IC
BIDIRECTIONAL MOTOR DRIVER
 WITH BRAKE FUNCTION

TENTATIVE**General Description**

The STK6865H is a bidirectional DC motor driver IC with brake function that is fabricated using our unique IMST (Insulated Metal Substrate Technology) structure. The motor speed can be controlled by the PWM input signal as well as the "L"/"H"-level DC input signal.

Features

- . Bidirectional motor driver and brake function, and protector against simultaneous application of input for forward/reverse drive.
- . Braking available with input open.
- . Braking available at forward drive mode
- . PWM input signal-used speed control available (25kHz max.)

Applications

- . Especially suited for driving DC brush-provided motors used in PPC's, printers, sewing machines.
