1) Regulation is measured at constant junction temperature, using pulse testing at a low duty cycle. Changes in output voltage due to heating effects are covered under thermal regulation specifications. Load regulation is measured from the bottom of the package for the TO-3 and TO-66 packages, at the junction of the wide and narrow portion of the output lead for the TO-220 package, and $\frac{1}{8}$ " below the base of the package on the output pin of the TO-257 package.

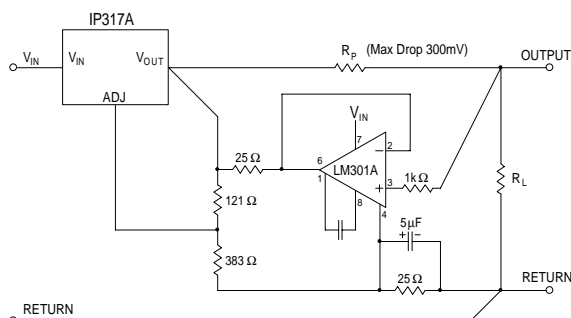

2) Test Conditions unless otherwise stated: $V_{IN} - V_{OUT} = 5\text{V}$, $T_J = 25^\circ\text{C}$, $I_{OUT} = 0.5\text{A}$, $I_{MAX} = 1.5\text{A}$.
 $P_{MAX} = 10\text{W}$ for SMD1, 20W for all other package styles.
 $V_{MAX} = 40\text{V}$ for standard series, 60V for HV series.
