## 7. Precautions for use

### 7-1. Lead forming method

Avoid forming a lead pin with the lead pin base as a fulcrum: be sure to hold a lead pin firmly when forming. Lead pins should be formed before soldering.

### 7-2. Notice of installation

#### 7-2-1 installation on a PWB

When mounting an LED lamp on a PWB, do not apply physical stress to the lead pins.

- The lead pin pitch should match the PWB pin-hole pitch: absolutely avoid widening or narrowing the lead pins.
- When positioning an LED lamp, basically employ an LED with tie-bar cut or use a spacer.

#### 7-2-2 When an LED 1 is mounted directly on a PWB

If the bottom face of an LED lamp is mounted directly on single-sided PWB, the base of the lead pins may be subjected to physical stress due to PWB warp, cutting or clinching of lead pins. Prior to use, be sure to check that no disconnection inside of the resin or damage to resin etc., is found. When an LED lamp is mounted on a double-sided PWB, the heat during soldering affects the resin; therefore, keep the LED lamp more than 1.6mm afloat above the PWB.

#### 7-2-3 Installation using a holder

During an LED lamp positioning, when a holder is used, a holder should be designed not to subject lead pins to any undue stress.

(Note) Pay attention to the thermal expansion coefficient of the material used for the holder. Since the holder expands and contracts due to preheat and soldering heat, mechanical stress may be applied to the lead pins, resulting in disconnection.

#### 7-2-4 Installation to the case

Do not fix part C with adhesives when fixed to the case as shown in Figure. A hole of the case should be designed not to subject the inside of resin to any undue stress.

**SHARP**

### 7-3. Soldering Conditions

Solder the lead pins under the following conditions

Type of Soldering	Conditions
1. Manual soldering	295°C±5°C. within 3 seconds
2. Wave soldering	260°C±5°C. within 5 seconds
3. Auto soldering	Preheating 70°C to 80°C, within 30 seconds Soldering 245°C±5°C, within 5 seconds

(Note) Avoid dipping resin into soldering bath.

Avoid applying stress to lead pins while they are heated. For example, when the LED lamp is moved with the heat applied to the lead pins during manual soldering or solder repair, disconnection may occur.

### 7-4. For cleaning

- (1) Solvent cleaning: Solvent temperature 45°C or less  
Immersion for 3 min or less
- (2) Ultrasonic cleaning: The effect to device by ultrasonic cleaning differs by cleaning bath size, ultrasonic power output, cleaning time, PWB size or device mounting condition etc. Please test it in actual using condition and confirm that doesn't occur any defect before starting the ultrasonic cleaning.
- (3) Applicable solvent: Ethyl alcohol, Methyl alcohol, Isopropyl alcohol

In case when the other solvent is used, there are cases that the packaging resin is eroded. Please use the other solvent after thorough confirmation is performed in actual using condition.
