description

The MSP50x3x family uses a revolutionary architecture to combine an 8-bit microprocessor, two speech synthesizers, ROM, RAM, and I/O in a low-cost single-chip system. The architecture uses the same arithmetic logic unit (ALU) for the two synthesizers and the microprocessor, thus reducing chip area and cost and enabling the microprocessor to do a multiply operation in 0.8 μs. The MSP50x3x family features two independent channels of linear predictive coding (LPC), which synthesize high-quality speech at a low data rate. Pulse-code modulation (PCM) can produce music or sound effects. LPC and PCM can be added together to produce a composite result. For more information, see the MSP50x3x User's Guide (literature number SPSU006).

absolute maximum ratings over operating free-air temperature range[†]

Supply voltage range, V_{DD} (see Note 1) . . . . −0.3 V to 8 V

Supply current, I_{DD} or I_{SS} (see Note 2) . . . . 100 mA

Input voltage range, V_I (see Note 1) . . . . −0.3 V to V_{DD} + 0.3 V

Output voltage range, V_O (see Note 1) . . . . −0.3 V to V_{DD} + 0.3 V

Storage temperature range . . . . −30°C to 125°C

[†] Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTES: 1. All voltages are with respect to ground.
2. The total supply current includes the current out of all the I/O terminals and DAC terminals as well as the operating current of the device.
