BULLETIN NO. DL-S 7612121, OCTOBER 1976

- 'S274 Provides 8-Bit Product in Typically 45 ns
- 'S274 Can Provide Sub-Multiple Products for n-Bit-by-n-Bit Binary Numbers
- 'LS275 and 'S275 Accept 7 Bit-Slice Inputs and 2 Carry Inputs for Reduction to 4 Lines in Typically 45 ns
- These High-Complexity Functions Can Reduce Package Count by Nearly 50% in Most Parallel Multiplier Designs
- When SN74S274 is Combined With SN74H183 (or SN74LS183) and Schottky Look-Ahead Adders, Multiplication Times are Typically:

16-Bit Product in 75 ns (79 ns)  
32-Bit Product in 116 ns (132 ns)

## description

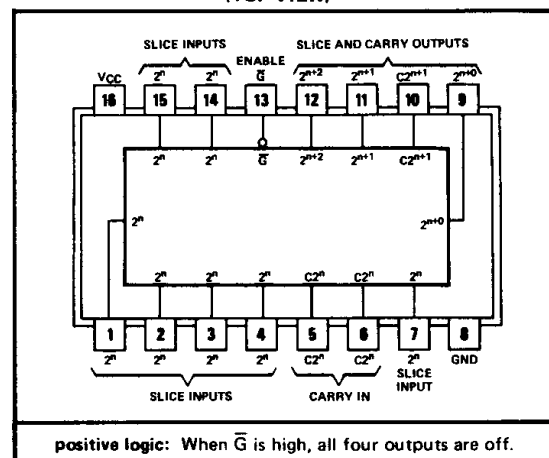

These high-complexity Schottky-clamped TTL circuits are designed specifically to reduce the delay time required to perform high-speed parallel binary multiplication and significantly reduce package count. The 'S274 is a basic 4-bit-by-4-bit parallel multiplier in a single package, and as such, no additional components are required to obtain an 8-bit product. For word lengths longer than 4 bits, a number of 'S274 multipliers can be combined to generate sub-multiple partial products. These partial products can then be combined in Wallace trees to obtain the final product. See Typical Application Data.

The 'LS275 and 'S275 expandable bit-slice Wallace trees have been designed to accept up to seven bit-slice inputs and two carry inputs from previous slices for reduction to four lines.

functional block diagram

NOTE: When one of the  $C2^n$  carry inputs is not used, it must be grounded. If neither  $C2^n$  carry input is used, both  $C2^n$  inputs are grounded and the  $C2^{n+1}$  output is normally left open.

schematics of inputs and outputs

absolute maximum ratings over operating free-air temperature range (unless otherwise noted)

Supply voltage, $V_{CC}$ (see Note 1)	7 V
Input voltage: 'LS275	7 V
'S274, 'S275	5.5 V
Off-state output voltage: 'LS275	7 V
'S274, 'S275	5.5 V
Operating free-air temperature range: SN54LS, SN54S Circuits	-55°C to 125°C
SN74LS, SN74S Circuits	0°C to 70°C
Storage temperature range	-65°C to 150°C

NOTE 1: Voltage values are with respect to network ground terminal.

## TYPICAL APPLICATION DATA

\*Each starred block may be either a basic bit-slice Wallace tree ('LS275 or 'S275 only) or a high-speed bit-slice Wallace tree ('LS275 plus 1/2 'LS183 or 'S275 plus 1/2 'H183). In either case the function of the terminal is the same as the similarly located terminal of the basic bit-slice (Figure 1) or high-speed bit-slice Wallace tree (Figure 2). Also for either tree, when only five inputs of the seven-input adder of the 'LS275/'S275 are used, the remaining two inputs must be grounded. When the high-speed adder is used, the C2<sup>n</sup> inputs of the 'LS275/'S275 must be grounded.

†For improved performance SN74LS181/SN74S181 ALUs with SN74S182 look-ahead generators can be substituted for the SN74283/SN74LS283/SN74S283 adders. Typically, the multiplication time will be reduced by 18 to 32 nanoseconds.
