

XC6214 Series

*500mA Output Current, High Speed LDO Regulators,
Thermal Shutdown Function, Ceramic Capacitor Compatible*

- ◆ CMOS Low Power Consumption : 8 μ A (TYP.)
- ◆ Maximum Output Current : More than 500mA
- ◆ Current Limit Circuit Built-In
- ◆ Thermal Shutdown Circuit Built-In
- ◆ Ceramic Capacitor Compatible

■ GENERAL DESCRIPTION

The XC6214 series are highly precise, low noise, high current, positive voltage low dropout regulators. They are fabricated using Torex's CMOS process. The series features a voltage reference, an error amplifier, a current limiter, a thermal protection circuit, and a phase compensation circuit plus a driver transistor.

The output voltage is selectable in 100mV increments within the range of 1.5V to 5.0V. (Output voltage 1.5V, 1.8V, 2.5V, and 3.3V are standard products. Output voltage 3.0V is under development to be a standard product. Other than these voltages are available as semi-custom products.)

The series is also compatible with low ESR ceramic capacitors, which give added output stability. This stability can be maintained even during load fluctuations due to the excellent transient response of the series.

The over current protection circuit and the thermal shutdown circuit are built in. The over current protection circuit will operate when the output current reaches current limit level. The thermal shutdown circuit will operate when the junction temperature reaches temperature limit level.

■ APPLICATIONS

- DVD, CD-ROM, HDD drive equipment
- Portable AV equipment (Cameras, VCRs, etc.)
- Wireless Communication equipment (Mobile & Cordless phone, etc.)
- Desktop computers, Note book computer, PDAs
- Network equipment (Wireless LAN etc.)
- Reference voltage
- Battery powered equipment

■ FEATURES

Maximum Output Current	: More than 500mA (800mA limit)
Dropout Voltage	: 500mV @ $I_{OUT} = 500mA$ ($V_{OUT}=3.3V$)
Operating Voltage Range	: 1.8V ~ 6.0V
Output Voltage	: 1.5V, 1.8V, 2.5V, 3.3V, (standard) 3.0V (under development) Other voltages between 1.5V to 5.0V (semi-custom)
High Accuracy	: Setting voltage accuracy $\pm 2\%$
Low Power Consumption	: 8 μ A (TYP.)
Ripple Rejection Rate	: 40dB @ 1kHz
Operating Temperature Range	: - 40°C ~ 85°C
Packages	: SOT-26 SOT-89

■ TEST CIRCUITS

● Circuit ①

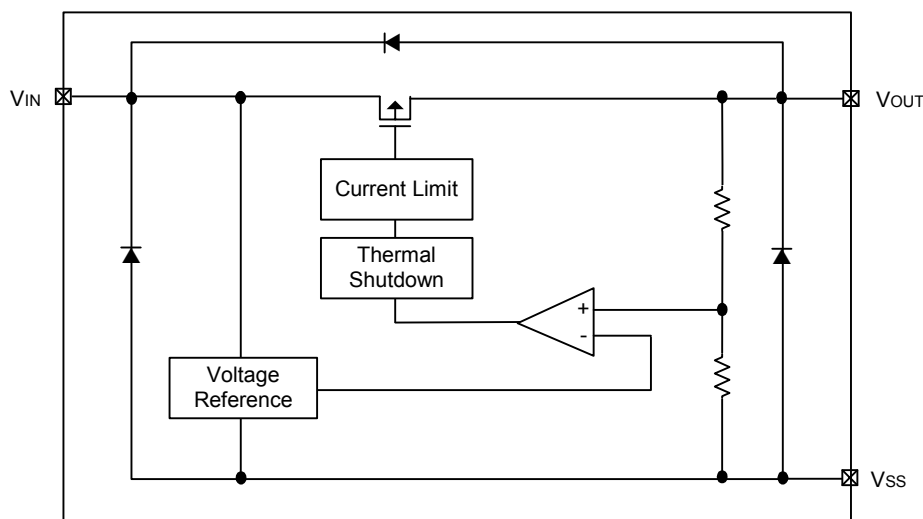

● Circuit ②

■ OPERATIONAL EXPLANATION

<Output Voltage Regulator Control>

The voltage, divided by resistors R1 & R2, which are connected to the V_{OUT} pin is compared with the internal reference voltage by the error amplifier. The P-channel MOSFET, which is connected to the V_{OUT} pin, is then driven by the subsequent output signal. The output voltage at the V_{OUT} pin is controlled & stabilized by negative feedback. The current limit circuit and over current protection operate in relation to the level of output current and heat.

<Low ESR Capacitors>

With the XC6214 series regulator, a stable output voltage is achievable even if low ESR capacitors are used, as a phase compensation circuit is built-in to the regulator. In order to ensure the stability of the load transient response and line transient response, we suggest that an output capacitor (C_L) be connected as close as possible, between the output pin (V_{OUT}) and the V_{SS} pin. Please use an output capacitor (C_L) with a capacitance more than 0.1 μ F. We also suggest an input capacitor (C_{IN}) of 0.1 μ F: this should be connected between V_{IN} and V_{SS} in order to stabilize input power source.

<Current Limiter, Short-Circuit Protection>

The XC6214 series regulator offers a combination of current limit and circuit protection by means of a built-in fixed current limiter circuit and a foldback circuit. When the load current reaches the current limit level, the fixed current limiter operates and output voltage drops. As a result of this drop in output voltage, the foldback circuit operates, the output voltage drops further and output current decreases. When the output pin is shorted, a current of about 50mA flows.

<Thermal Shutdown>

When the junction temperature of the built-in driver transistor reaches the temperature limit level (150°C TYP.), the thermal shutdown circuit operates and the driver transistor will be set to OFF. The thermal shutdown function will be released (automatically recovered) when the junction temperature decreases to the thermal shutdown release temperature level (125°C TYP.) and the IC re-starts the operation.

■ NOTES ON USE

1. Please use this IC within the stated absolute maximum ratings. The IC is liable to malfunction should the ratings be exceeded.
2. Where wiring impedance is high, operations may become unstable due to noise and/or phase lag depending on output current. Please strengthen V_{IN} and V_{SS} wiring in particular.
3. Please wire the input capacitor (C_{IN}) and the output capacitor (C_L) as close to the IC as possible.
4. Output voltage may increase when the IC is used at light load current (around 0 to 2 μ A) depending on temperature conditions, etc.

POWER DISSIPATION

The 2, 4 and 5 pins of the SOT-26 package are the common Vss pins at the heat dissipation pads.
For increasing power dissipation of the package, please use the 2, 4, and 5 pins as the Vss pin on the PCB board.
