

TOSHIBA BIPOLAR LINEAR INTEGRATED CIRCUIT SILICON MONOLITHIC

TA7259P, TA7259P(LB), TA7259F

DC MOTOR DRIVER IC

The TA7259P is a 3-phase Bi-directional motor driver IC. It designed for use VTR tape deck, floppy disk and record player motor drivers.

It contains output power drivers, position sensing circuits, control amplifier and CW/CCW control circuit.

FEATURES

- 3-phase Bi-directional driver and output current up to $\pm 1.2A$.
- Few external parts required.
- Wide operating supply voltage range : $V_{CC}(\text{opr.})$ MIN. = 7V
- Forward and reverse rotation is controlled simply by means of a CW/CCW control signal fed into FRS.
- High sensitivity of position sensing amplifier.
($V_H = 10mV$ (Typ.)), recommend to use TOSHIBA Ga-As hall sensor "THS" series.
- Surge protect diode connected for all input terminals.
(Position sensing, control, CW/CCW control inputs.)
- DIP-14F power package.

- TOSHIBA is continually working to improve the quality and the reliability of its products. Nevertheless, semiconductor devices in general can malfunction or fail due to their inherent electrical sensitivity and vulnerability to physical stress. It is the responsibility of the buyer, when utilizing TOSHIBA products, to observe standards of safety, and to avoid situations in which a malfunction or failure of a TOSHIBA product could cause loss of human life, bodily injury or damage to property. In developing your designs, please ensure that TOSHIBA products are used within specified operating ranges as set forth in the most recent products specifications. Also, please keep in mind the precautions and conditions set forth in the TOSHIBA Semiconductor Reliability Handbook.

APPLICATION CIRCUIT

(Note) Utmost care is necessary in the design of the output line, V_{CC} and GND line since IC may be destroyed due to short-circuit between outputs, air contamination fault, or fault by improper grounding.
