

TC4017BP, TC4017BF

TC4017BP / TC4017BF DECADE COUNTER / DIVIDER

TC4017BP / BF is decimal Johnson counter consisting of 5 stage D-type flip-flop equipped with the decoder to convert the output to decimal.

Depending on the number of count pulses fed to CLOCK or CLOCK INHIBIT one output among 10 output lines “Q0” through “Q9” becomes “H” level.

The counter advances its state at rising edge of CLOCK (CLOCK INHIBIT=“L”) or falling edge of CLOCK INHIBIT (CLOCK=“H”). RESET input to “H” level resets the counter to Q0=“H” and Q1 through Q9=“L” regardless of CLOCK and CLOCK INHIBIT.

● TOSHIBA is continually working to improve the quality and the reliability of its products. Nevertheless, semiconductor devices in general can malfunction or fail due to their inherent electrical sensitivity and vulnerability to physical stress. It is the responsibility of the buyer, when utilizing TOSHIBA products, to observe standards of safety, and to avoid situations in which a malfunction or failure of a TOSHIBA product could cause loss of human life, bodily injury or damage to property. In developing your designs, please ensure that TOSHIBA products are used within specified operating ranges as set forth in the most recent products specifications. Also, please keep in mind the precautions and conditions set forth in the TOSHIBA Semiconductor Reliability Handbook.
